

In everything we do

Carbon Neutral Operations Declaration

“Achieving carbon neutrality in 2022 across our global operations has been one of the proudest moments for myself and my team. Our dedication to the process in 4 continents has resulted in an organisation that fully understands the importance of our focus on sustainability and responsible decisions and outcomes.”

Mark Robinson, Executive Chairman Autex Acoustics Group

Carbon neutral operations

The Autex Acoustic leadership team understands the urgent need for action to address the climate crisis. Since 2012, when we first embarked on reducing both raw material use and our emissions, we have made sustainable business practices our focus across our global organisation, reaching important milestones of carbon neutrality for our products in 2021 and global operations in 2022.

We are committed to net zero carbon, establishing carbon reduction plans to further drive down our remaining emissions. Our experience in achieving carbon neutral status has empowered us to further innovate our sourcing of recycled materials and evolving manufacturing processes to eliminate carbon emissions that remain in our supply chain. We will document our progress on our website.

We acknowledge that global sustainability challenges cannot be tackled by one company alone, and we support the global movements calling for sustainable manufacturing and construction. Read more about our organisation's commitment to positive change on our website.

Carbon neutral operations

A step-by-step overview of how we create carbon neutral operations

1

To address our operational emissions, the Autex in-house sustainability team annually measures our Greenhouse Gas (GHG) emissions of all global Autex organisations.

2

Carbon accounting is undertaken in accordance with ISO 14064-1 which specifies principles and requirements at the organisational level for the quantification and reporting of GHG emissions and removals.

3

An annual, independent verification check of GHG data is performed using a sample-based approach.

4

Once carbon calculations have been third-party verified, operational emissions are offset through investment in the equivalent number of certified carbon credits issued by the UN.

5

Carbon emissions continue to be measured and monitored annually with carbon reduction initiatives implemented.

By choosing Autex Acoustic products, you are supporting a business taking action to address climate change. Together, your business and ours can make a difference in the specification of carbon neutral products for an industry that is revolutionising how we achieve sustainable communities. A better future is now.
