Installing IntelliDrive Controller Ver 1.2.8

Windows

For Windows 32 bit (Win XP, older Win 7), please install the file “IntelliDrive Controller 32bit Ver 1.2.8.msi”

For Windows 64 bit (Win 7, Win 8), please install the file “IntelliDrive Controller 64bit Ver 1.2.8 .msi”

MAC

For MAC please install the file “IntelliDrive Controller MAC Ver 1.2.8 .zip”

Update Firmware

After installing the latest Software release, firmware must be updated on your units. Please do so by connecting one or more units to your computer, using a standard, off-the-shelf Ethernet router and Cat-5 cabling.

Please ensure that the Ethernet connection is stable and close all other programs on the computer before proceeding with the update.

Further, please ensure any presets you wish to keep are stored on a computer before proceeding as it may over write all settings in these preset slots on the device.

Open the IntelliDrive Controller software and wait for the units to come online.

Click “Hardware” in the upper menu bar; click “Firmware Update All Units” Two windows will open simultaneously. Wait until the lower window declares that all units have been updated successfully before you attempt to close anything. This may take several minutes.

Functionality Highlights in Ver 1.2.8 (Improvements compared to Ver 1.1.10)

- Support of Locked Presets
- Ready for: IPD LoadLibrary “Manufacturer presets”
- Front panel lock for Mutes and Output gain
- Factory Default preset stored on slot 1
- Automatic Backup/Restore of presets when doing Firmware upgrade (Single unit only)
- Better visibility if a unit goes out of Sync
- Various bug fixes
