

## Behringer RD-8 Firmware

### Version 2.0.6 (01 Dec 2020)

#### New features:

1. In STEP mode, hold TAP/HOLD then press RECORD to set pattern auto save on or off.
2. Pattern length menu displayed in SONG and PATTERN mode.
3. Push LENGTH, then hold TAP/HOLD and push >> (right double arrow beside LENGTH) to immediately duplicate the contents of the current length, this is very useful when you are working with for example a 3/4 pattern with 12 steps.
4. When STEP RECORD is enabled, the display shows "auto" or "manu" for 1 second to indicate the save mode.
5. Recall stored pattern by holding TAP/HOLD + STEP button of the pattern you wish to restore. This only works when you are in Pattern mode and set to manu (manual) save mode.

#### Improvements:

1. Improved sweep erase function.
2. Improved note repeat to the MIDI out.
3. Fixed the behaviour of auto fill. Now replaces the end of the pattern with the amount of steps programmed in the auto fill pattern if less than the current pattern playing.
