

PLETHORA X1 Firmware Update Release Notes

Updating instructions

1. Connect your Plethora X1 to your computer using a USB cable.
2. Hold down the footswitch.
3. Power cycle the Plethora X1 (remove and reinsert power).
4. The Plethora X1 starts in bootloader mode, showing the current version on the display.
5. Open the firmware updater for the version you want to upgrade to (.exe for PC, .dmg for Mac)
6. Press "Update". The update progress will be shown on both your computer and on the pedal.
7. Upon successful update, the pedal will reboot.
 - a. Note: You may experience odd behaviour immediately after firmware updating. Such issues can be fixed with a manual reboot of the pedal (removing and reinserting power).

DO NOT remove the power from your unit whilst the update is in progress.

NOTE: To check the current firmware version, start the pedal in boot mode.

Please note that to get max benefit from the new effects, you will need the latest version of the TonePrint app that can be found in the app store, google PLAY store or downloaded for MAC or PC here:

<https://www.tcelectronic.com/tonePrints.html>

With best regards from TC Electronic

Version 1.1.13

Released 23 March 2025

What's new?

1. Infinite Sample Sustainer

The addition of the Infinite Sample Sustainer allows you to hold notes and chords infinitely. You will need version 4.6.18 of the TonePrint app, as well as downloading the newest content (find it in the cogwheel menu in the app) to be able to load the Infinite Sample Sustainer unto the Plethora X1.

Note: As this version of the Infinite Sample Sustainer is a direct port of the version also introduced into Plethora X5 and X3, it does not contain the reverb section found in the original pedal. Additionally, the possibility of Kill Dry is not available either. These changes will result in some TonePrints not sounding like their counterparts on the original pedal.

Version 1.0.31

Released 5 February 2025

Enhancements/Bug Fixes:

Fixed rare bug where pedal would start in front test after updating to 1.0.29.

Version 1.0.29

Released 24 January 2025

Enhancements/Bug Fixes:

- Fixed connectivity issues for mobile devices.

Version 1.0.27

Original firmware released with the pedal.
