About this show:

This is part of *Wetlands and the World*, a project of Ducks Unlimited Canada and its partners to explore wetlands across cultures. This show is linked to the elementary school science curriculum and is designed to support the teaching of English literacy, although many teachers will find it valuable for general classroom use.

Before You Begin:

- Preview the show
- Print slides 29 to 38. These contain notes for the teacher & ideas to stimulate discussions with your students.
- Reminder: Advance the show to Slide 3 before you present it to your class.

Additional information and resources may be found on our website at education.ducks.ca. French versions of some of the resources may found at education.canards.ca.

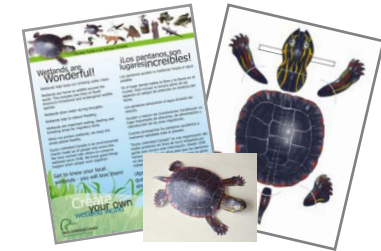

About Wetlands & the World

Wetlands and the World provides ways for exploring wetlands across cultures and for recognizing the value of wetlands in maintaining a healthy world for all of us. Like all of the resources and programs and activities offered by Ducks Unlimited Canada, this program is linked to the elementary school curriculum across Canada. This project consists of three parts:

Kids and Wetlands Go Together includes a world map (in English or French) highlighting wetlands and the important role they play around the world.

Wetlands are Wonderful! Bilingual pieces in English (or French) as well as a second language (*including Arabic, Chinese, Cree, Korean, Ojibwe, Punjabi, Somali, Spanish and Vietnamese*). Each language piece includes one of ten different wetland creatures which can be used to create 3-D paper models, along with natural history notes.

Wetlands and the World: Resources for Literacy. (English only)
Designed to help in English literacy development while addressing the elementary science curriculum. This includes:

- information for teachers, student activities which may be reproduced for classroom use
- Picture Dictionary to assist in vocabulary development.
- Powerpoint presentation *Wetlands Around the World*

Wetlands Around the World

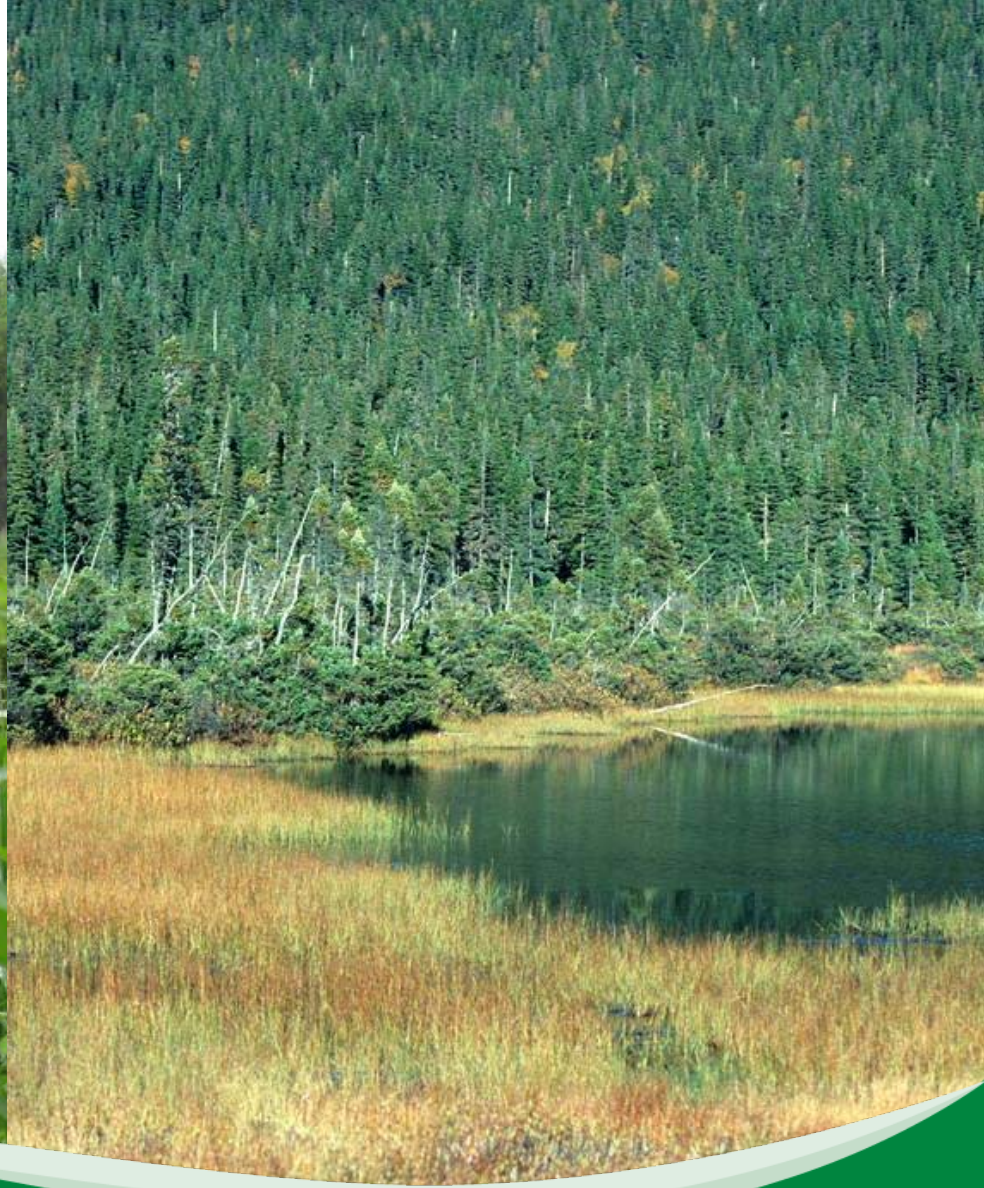

There are many kinds of wetlands. . .

and they go by many different names.

In Canada, three common wetlands
are a **marsh** . . .

Many, like this wood duck, nest and raise their young in, or near, wetlands.

Many kinds of fish, insects and amphibians (like the frog) lay their eggs in wetlands.

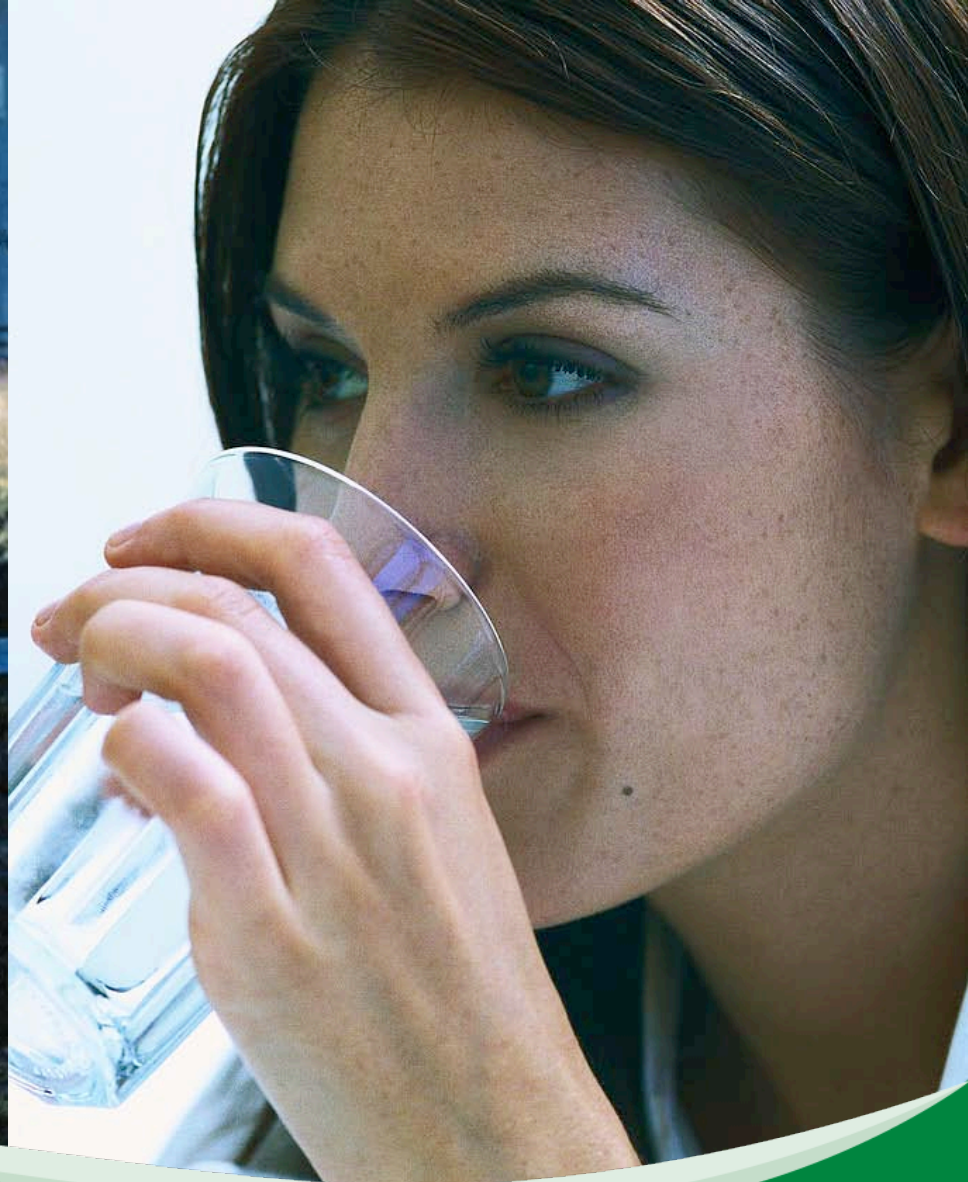

**For others, it is an important place
to find water to drink.**

During migration ducks and other animals rest and feed in wetlands.

... that act like filters and help to clean our drinking water.

. . . and help prevent flooding.

Because wetlands are important . . .

... adults and children work to protect them,

**Let's learn more about wetlands and
how we can help, together!**
