AND THE PATH TOWARDS ZERO CARBON

OCTOBER 2024

Delivering Marine Shipping Ingenuity WORLDWIDE

OUR CURRENT TOP FIVE MATERIAL TOPICS

Over 175 Years of Shipping History

La Compagnie Du Richelieu

In 1845, Jacques Sincennes creates La Compagnie du Richelieu, consisting of one paddle steamer and a towed barge to help farmers get their goods up the Richelieu River and along the St. Lawrence River to market in Montreal. The Richelieu River links Lake Champlain and the St. Lawrence River. Sincennes' company evolves into the Richelieu & Ontario Navigation Company, the foundation of what would eventually become Canada Steamship Lines. Inland shipping ventures such as Sincennes' grow and multiply over the next 68 years in a very fragmented way, with each serving a particular route and little overlap or coordination of services.

The Chippewa, launched in 1893

Donald Stewart is one of five CSL ships lost during World War II

CSL Ships Support The Allies

During the Quebec Conference, a highly secret military meeting is held in Quebec City between the British, Canadian and United States governments. CSL's SS Tadoussac transports all attending senior officers, including Britain's Lord Louis Mountbatten and U.S. Gen. George Marshall.

World War II ends with CSL back in the black. The company has lost five Lakes ships to enemy action: the Magog, the Waterloo, the Lennox, the Donal Stewart and the Norfolk. The end of the war also ushers in a quicker pace to life, all but ending the era of leisurely river cruises. With better highways and more affordable cars, people can travel from place to place faster than ever before. After the war, responding to massive industrialization and the growth of the steel industry and related need to transport iron ore, Sir James Dunn, owner of Algoma Steel, buys control of CSL to assure supplies.

World's Longest Running B100 Biofuel Trials

On August 2019, CSL runs its first test of a marine biofuel made of 50% bio-content made from waste agricultural products. on the 36,920 DWT self-unloading bulk carrier Atlantic Huron. The test shows promising results as a transition fuel towards decarbonization.

CSL completes the world's longest-running trials of B100 biodiesel on marine engines, accumulating nearly 30,000 running hours. Conducted on half of CSL's Canadian fleet, the tests result in a 23% total fleet life cycle reduction of CO2 as compared to marine gas oil (MGO). During the trials, 14,000 tonnes of MGO was substituted for 100% bio-content second-generation biofuel, requiring no modification to existing ship equipment. The test results confirm the potential of biodiesel as a realistic and immediate alternative to fossil fuel to support the decarbonization of the marine transportation sector.

Excellent Anecdote where AVEVA greatly help at the beginning of this Trial: Fuel test were showing a calorific value equal to MGO while we found, with the PI System that it was between 12 to 15% less. Calorific value is directly proportional to fuel consumption

Over 175 Years of Shipping History

CSL Acquire 50% of Peak Group

2021

2022

2023

> 2024

Under the Peak CSL Group banner, the company is positioned to provide an expanded suite of services, particularly catering to the fast-growing offshore renewable energy sector.

This will cover rock and ballast logistics support for offshore wind farms, turnkey material transfer solutions and a fleet of project carriers that includes low-to-zero emission vessels.

24 HOURS A DAY

24 hours a day operation at speeds up of up to 5,000 tonnes per hour

OFFSHORE WIND PROJECTS

Self-unloaders are ideally suited and cost-effective to support offshore wind projects

With Aggressive Health & Safety, Decarbonization and Environmental goals, CSL feels the need to explore Digitalization of their Asset.

As a Pilot, they installed the AVEVA PI System on board M/V Thunder Bay and CSL Niagara; respectively a modern Trillium Class Vessel and an older recently Repowered Forebody Class Vessel

Leveraging Digital Technology to Achieve our Goals

2016

First Use Case:

> 2017

Brief Description: OWS running at night: O2 red flags on one Vessel

2018

2019

Case: OWS running too much

2020

solution: To install mechanical seals instead of packing. Cost \$15,000

2021

\$12,000 spent in parts in 2016 for the OWS.

2022

90% of \$12,000= 10,800\$. 30% Contingency:

2023

10,800 (-\$3240) = \$7,560 x 2 years:

2024

\$15,120 in addition to Environmental Risks & Energy Savings.

CSL Goes Enterprise Agreement With AVEVA

2023
2024

As a result of cost, complexity, footprint and forecasted maintenance burden, CSL Decides to go from an on-premise server installation to a central remote single server installation. Time has proven that this was the right decision; especially with the advancement of PI Connect and Edge Data Store.
Four vessels had to be reconfigured.

CSL Creates Custom Application - The O2 HMI

2016

The Power of AVEVA made it seamless for CSL to build their onboard custom application linked to the AVEVA PI System. O2 HMI permits to have offline experience, well develop in taking manual inputs and design compliant with Bridge Console Equipment

Among Other Things

- 2020 O2 Team Reorganization - A mix of Deployment, Development and Value Finding And ... A new Logo for O2
- 2021 Conjoint Project With AVEVA and Advance Analytics
- 2022 O2 Team Reorganization – Creation of Standard, System and Support Center (S3C)
- 2023 Project Closure and Value Finding ----- > New vessels under new built / conversion umbrella
- 2024 O2 Project is getting out of CSL ----- > Plan to install on a new vessel of one of our Joint Venture.
Connecting O2 with Vessel Plan Maintenance - ShipSure

O2 overview – We are Innovators

1- Digitizing Vessel Data

Systems data and crew inputs are captured and archived in a digital twin located onshore

CSL TACOMA		
Data Source	OT Sensor	Status
ECDIS	NAV MOXA	✓
Nav. Lights	NAV MOXA	✓
RAI	NAV MOXA	✓
AMS	MFD5	✓
Ammeters	AMS	✓
Flow Meters	AMS	✓
Torque Meter	AMS	✓
SUL	CP Lean Processor	✓
OWS	Alfa Laval BlueBox	✓

Digital Twin

2- Expanding with Context

Vessel data is enriched with voyage, geofencing, traffic, compliance, weather, and user inputs

- Voyage (IMOS)
- Traffic
- Geofencing (ESRI)
- Weather
- Compliance

O2 digitally generated report

GREAT LAKES PILOTAGE REGION DISTRICTS TRANSIT SUMMARY	
(C)-Cornwall (Saint-Lambert to Snell)	0
(1)-District 1 (Snell to Cape Vincent)	0
(LO)-Lake Ontario (Cape Vincent to Port Weller)	3
(2)-District 2 (Port Weller to Huron Cut Buoy 11&12)	11
(3)-District 3 (Navigable waters above Huron Cut Buoy 11&12)	0

3- Advisory and Analytics

Produces decisional Advisory Dashboards and Analytics Reports using algorithms and third party plugins. Helps crew and office make better-informed decisions.

GOALS AND AMBITIONS

Decarbonization

1

35% reduction in carbon intensity of shipping operations by 2030 compared to 2005

An evaluation revealed that various initiatives utilizing O2 led to an 8,233-tonne reduction in CO2 equivalent emissions across 11 vessels during the sailing season, compared to the average over five years.

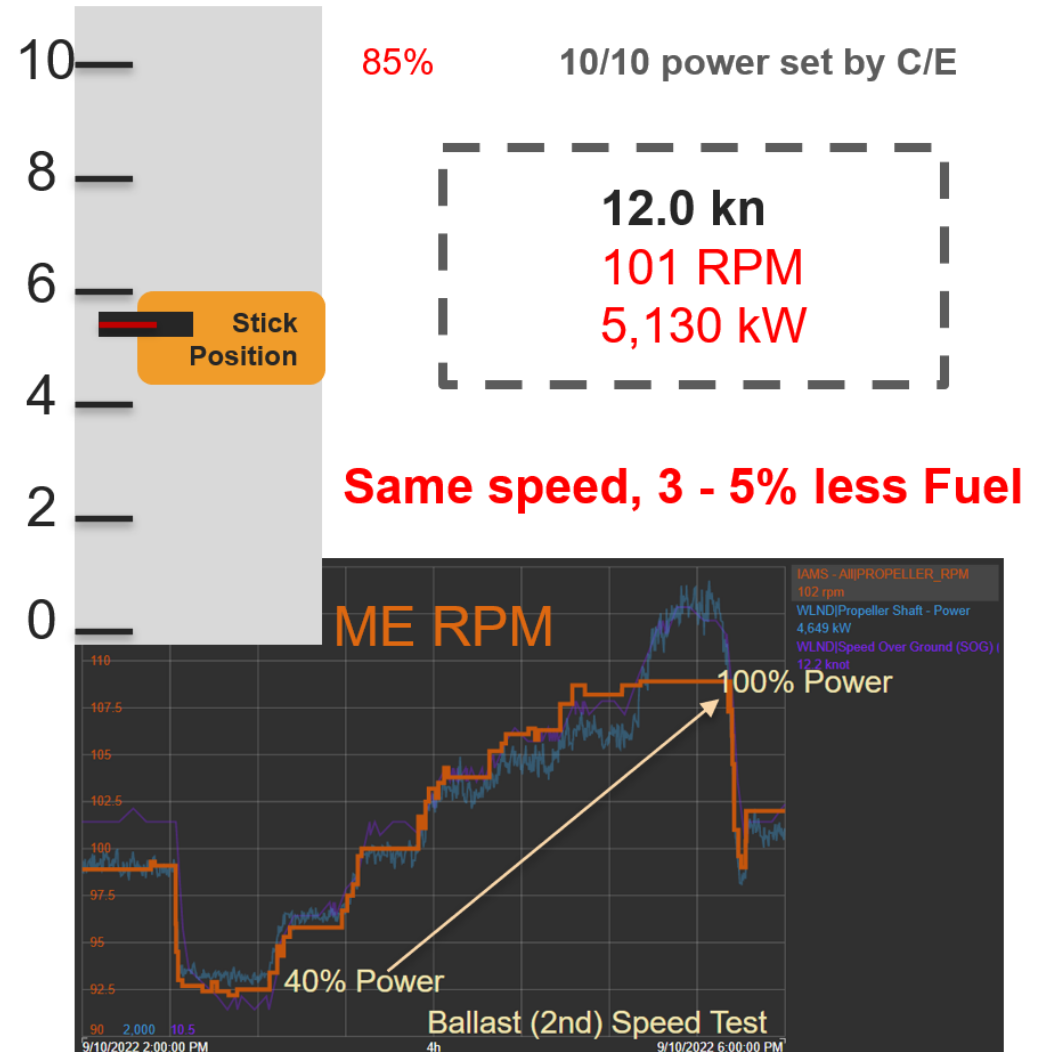

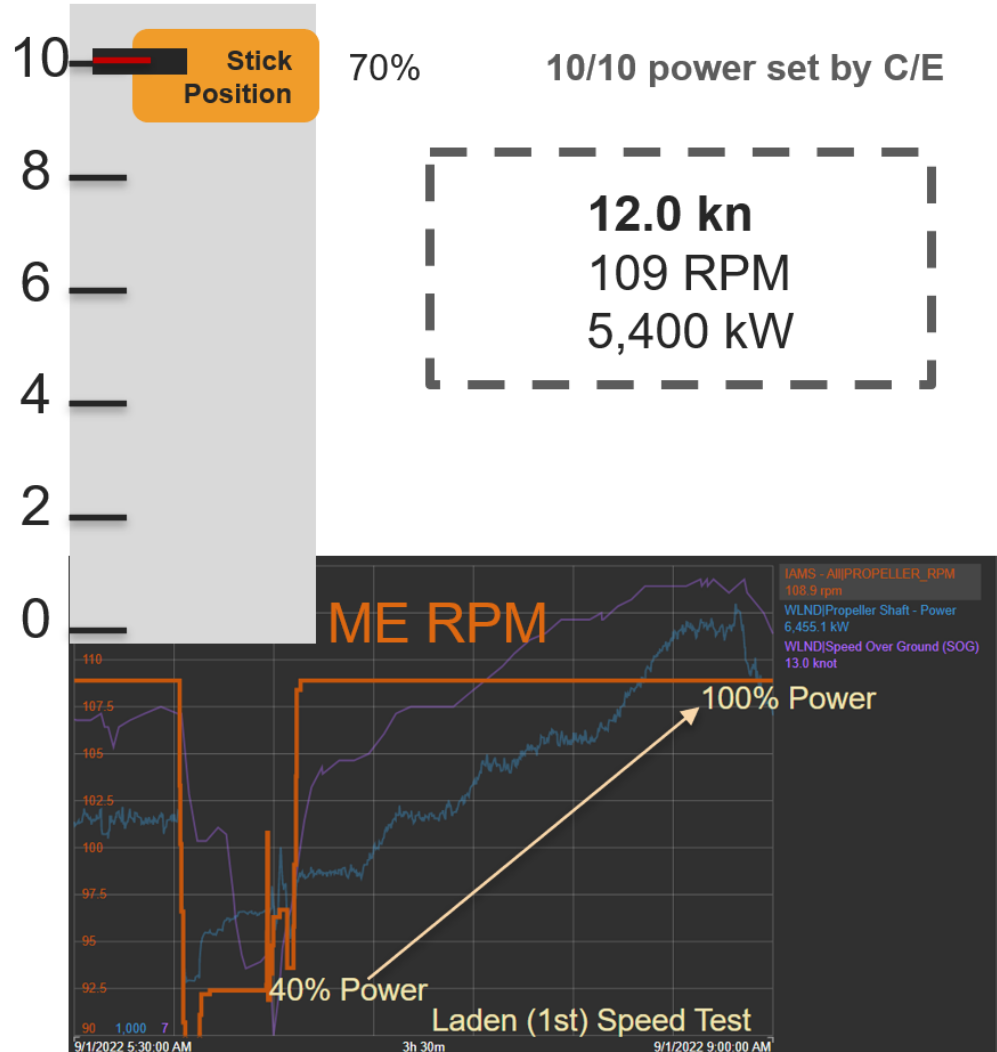

Using Data to find Positive Outliers

One vessel of a sister fleet came out as an outliers because its consumption was far better than the rest. This was found using the O2 and the tools in place. Investigation was found and just by adjusting settings and slightly change heat management onboard, considerable savings were achieve with out tradeoff nor investment.

Cut TOH Consumption by more than half

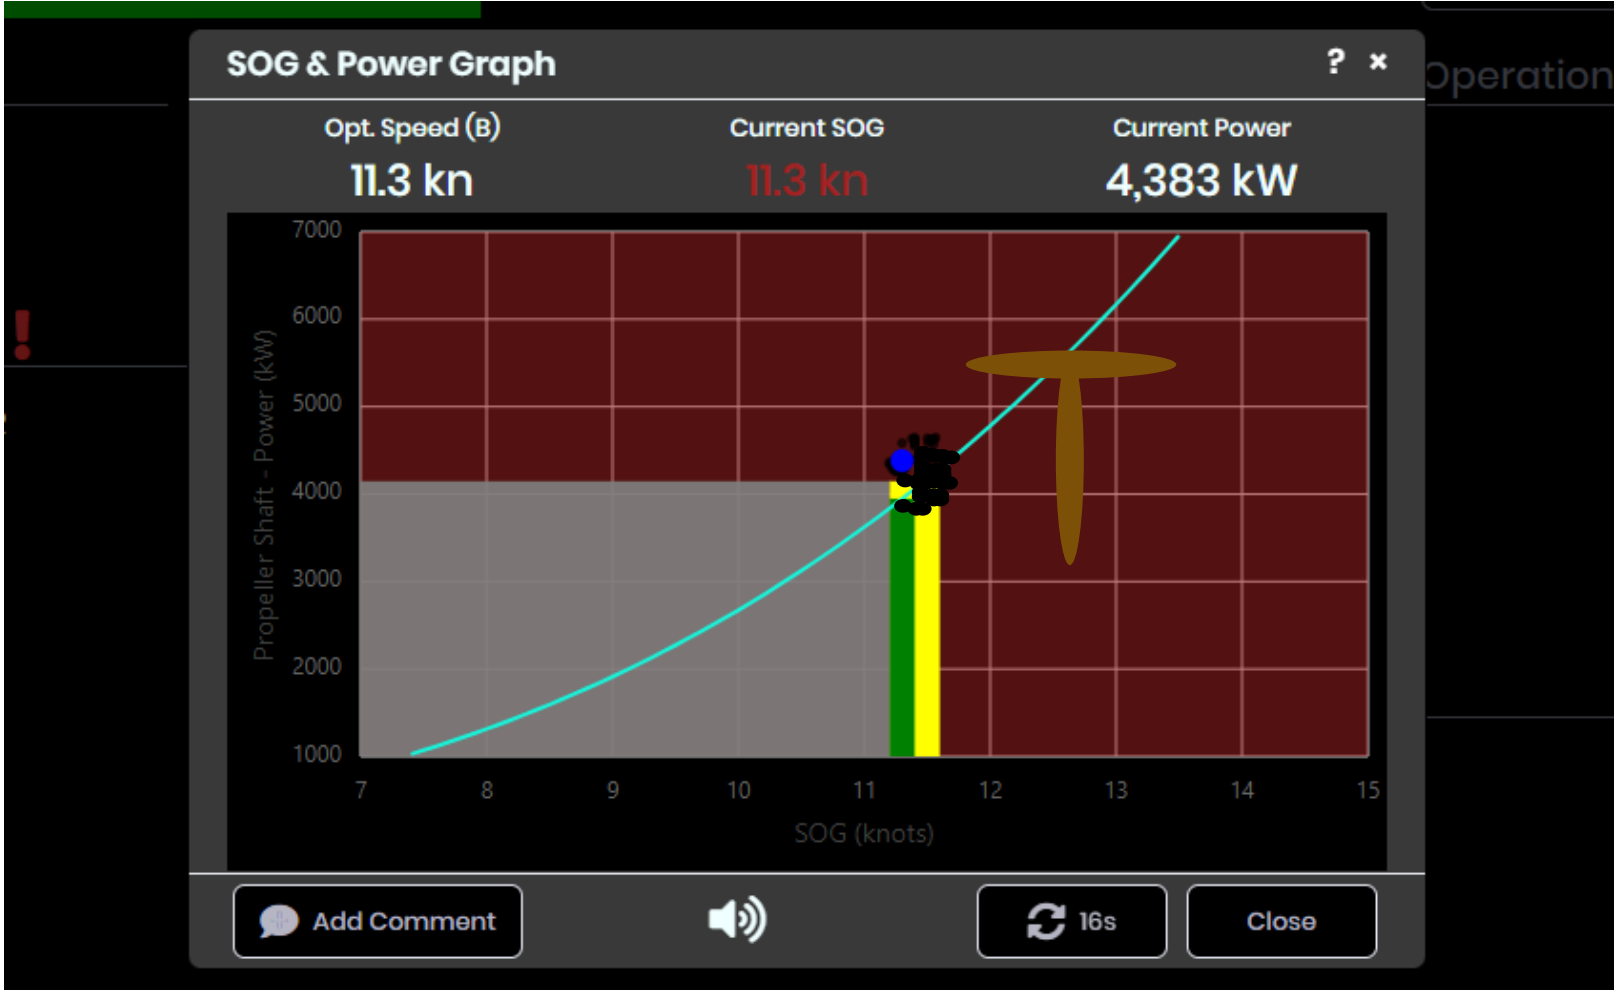

ME Settings Adjustment

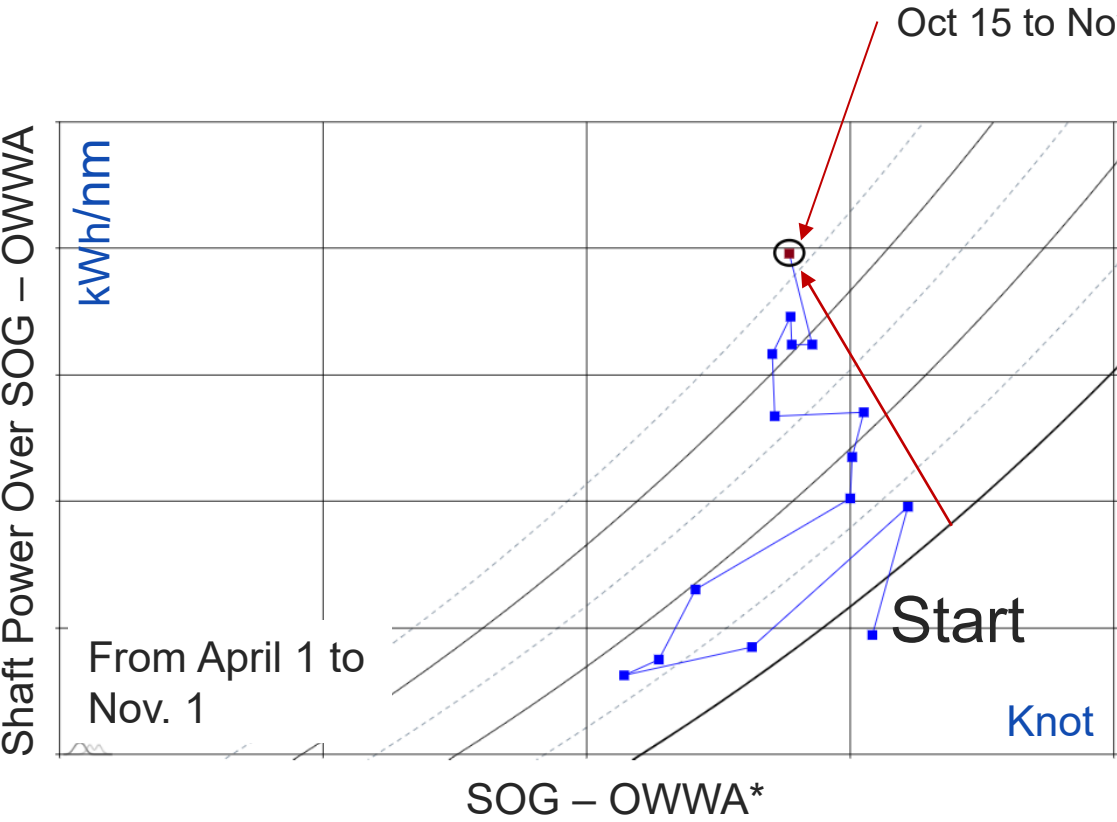

Using Data to prescribe and Maintain Just in Time Speed

With Deep Analytics and AI, CSL has the right Data, the right level of monitoring and the right level off feedback to prescribe the right Speed any time while tools are in place to assist the crew in maintaining this speed. This is a big contributor to 8,233-tonne reduction in CO2 equivalent -

Using Advance Analytics to Detect and confirm Hull Fouling

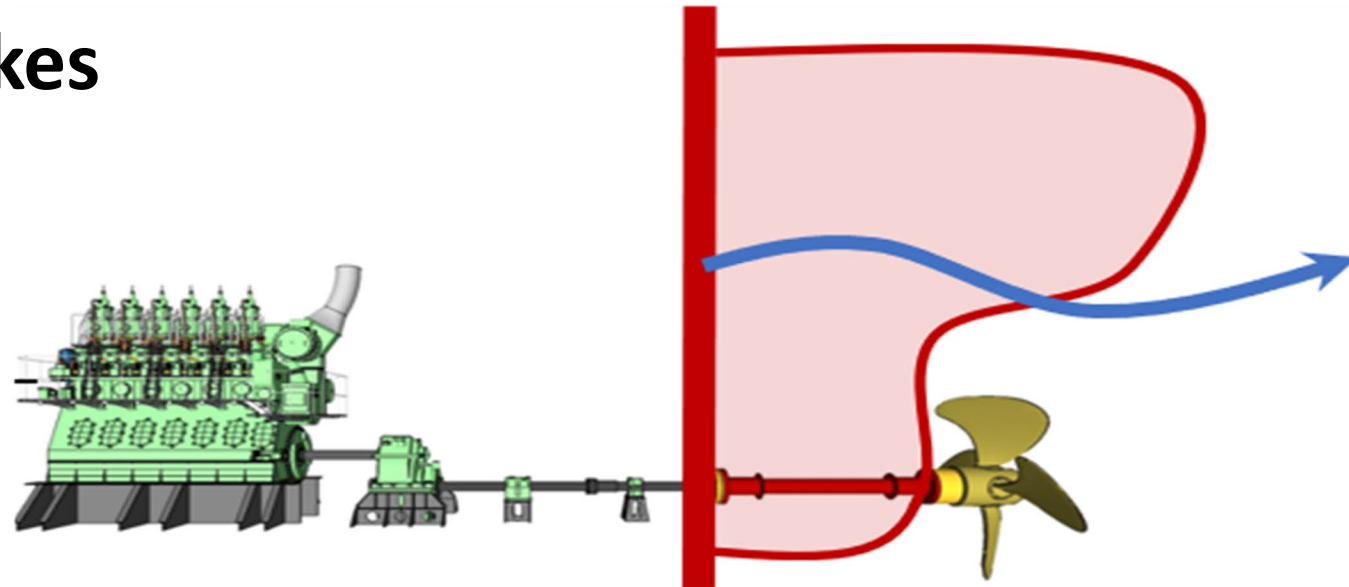

*OWWA – Open Water Weekly (2) Average

Hull Fouling – What Next

In talks with Service Providers, Port Authorities and Governments to find best path Forward on the Great Lakes

GOALS AND AMBITIONS

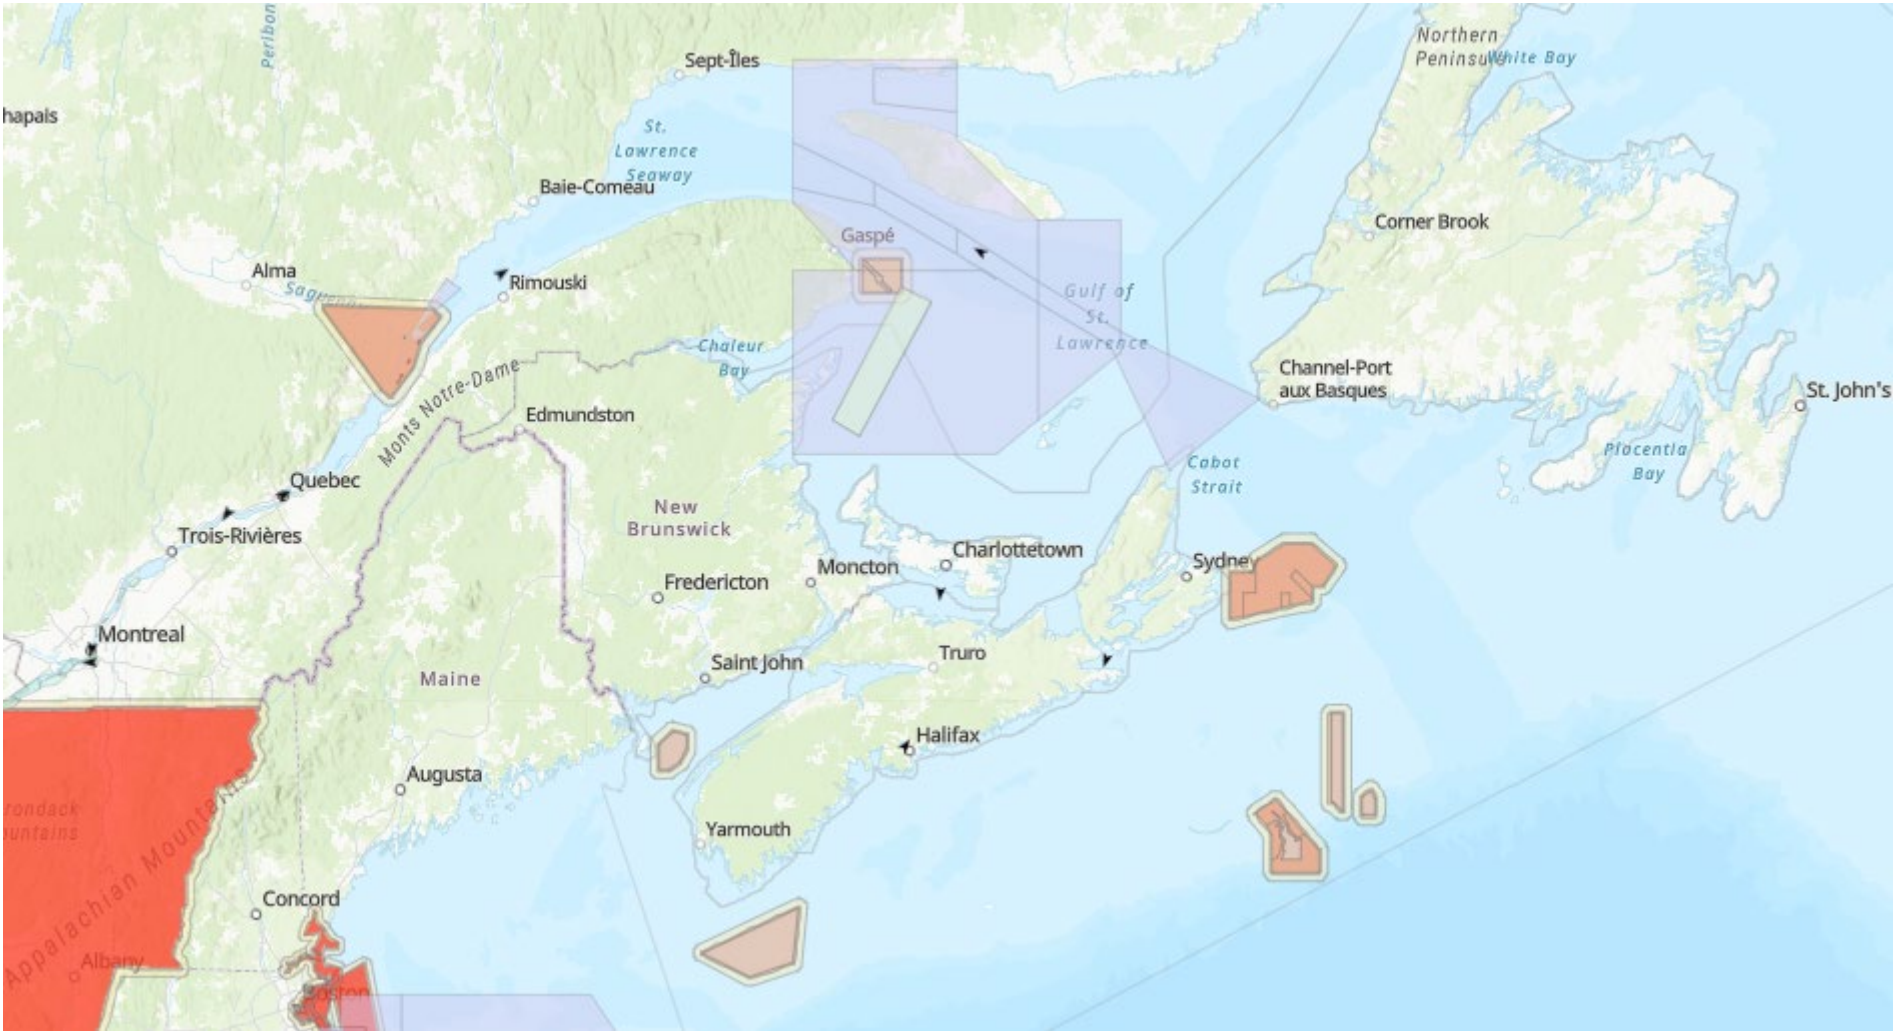

Accidents, Oil Spills, and Marine Pollution

2

Leveraging data and Geofencing to minimize Accident Via Asset Anomaly Detections and reducing infringements

Whale – Speed Reduction Dynamic Zones

Very Slow Trending Oil Pressure reveals Auxiliary Engine Oil Bad Condition

Anomaly Detection –

Very Slow Trending Oil Pressure reveals Auxiliary Engine Oil Bad Condition

O2 detected a below abnormal trend relating to the ME shaft earthing device.

Please acknowledge the receipt of this notification and provide any findings related to the subject matter.

Anomaly Detection Details

AE 3 LO inlet pressure gradual decreasing

Possible Root Causes

- Poor LO pump performance
- Dirty LO filter or LO inlet lines
- Faulty Sensor

Attachment

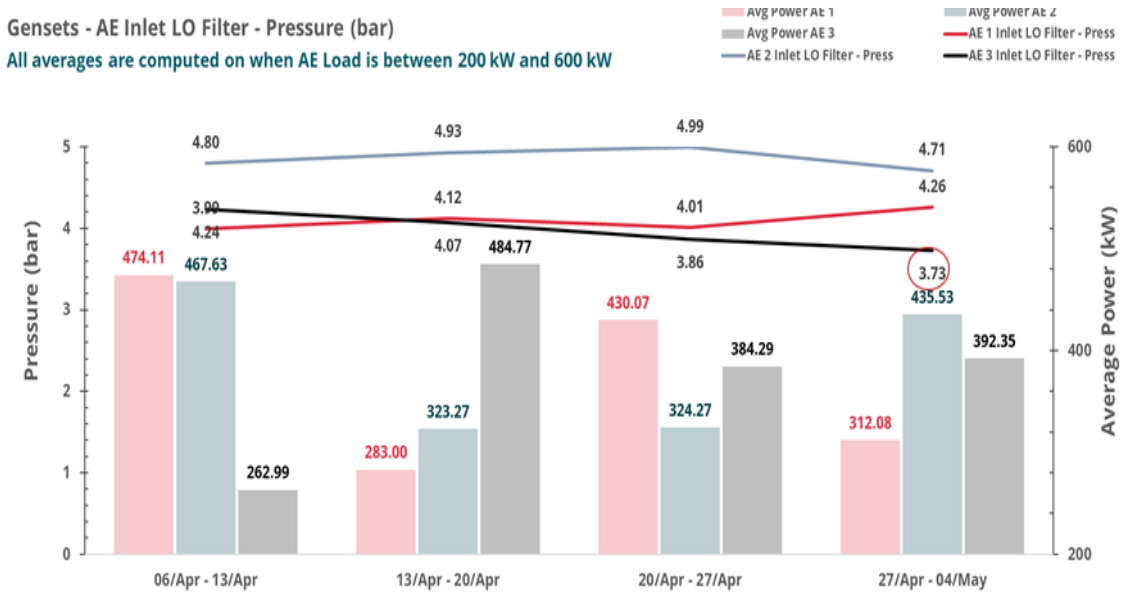

- AE 3 Inlet LO Filter – Press trend (last 7 days)
- For Comparison: AE Inlet LO Filter – Press & AE Inlet LO Filter – Temp data for AE 1, AE 2 and AE 3 (Last 30 days)

AE 3 Inlet LO Filter – Press trend (last 7 days)

Gensets - AE Inlet LO Filter - Pressure (bar)

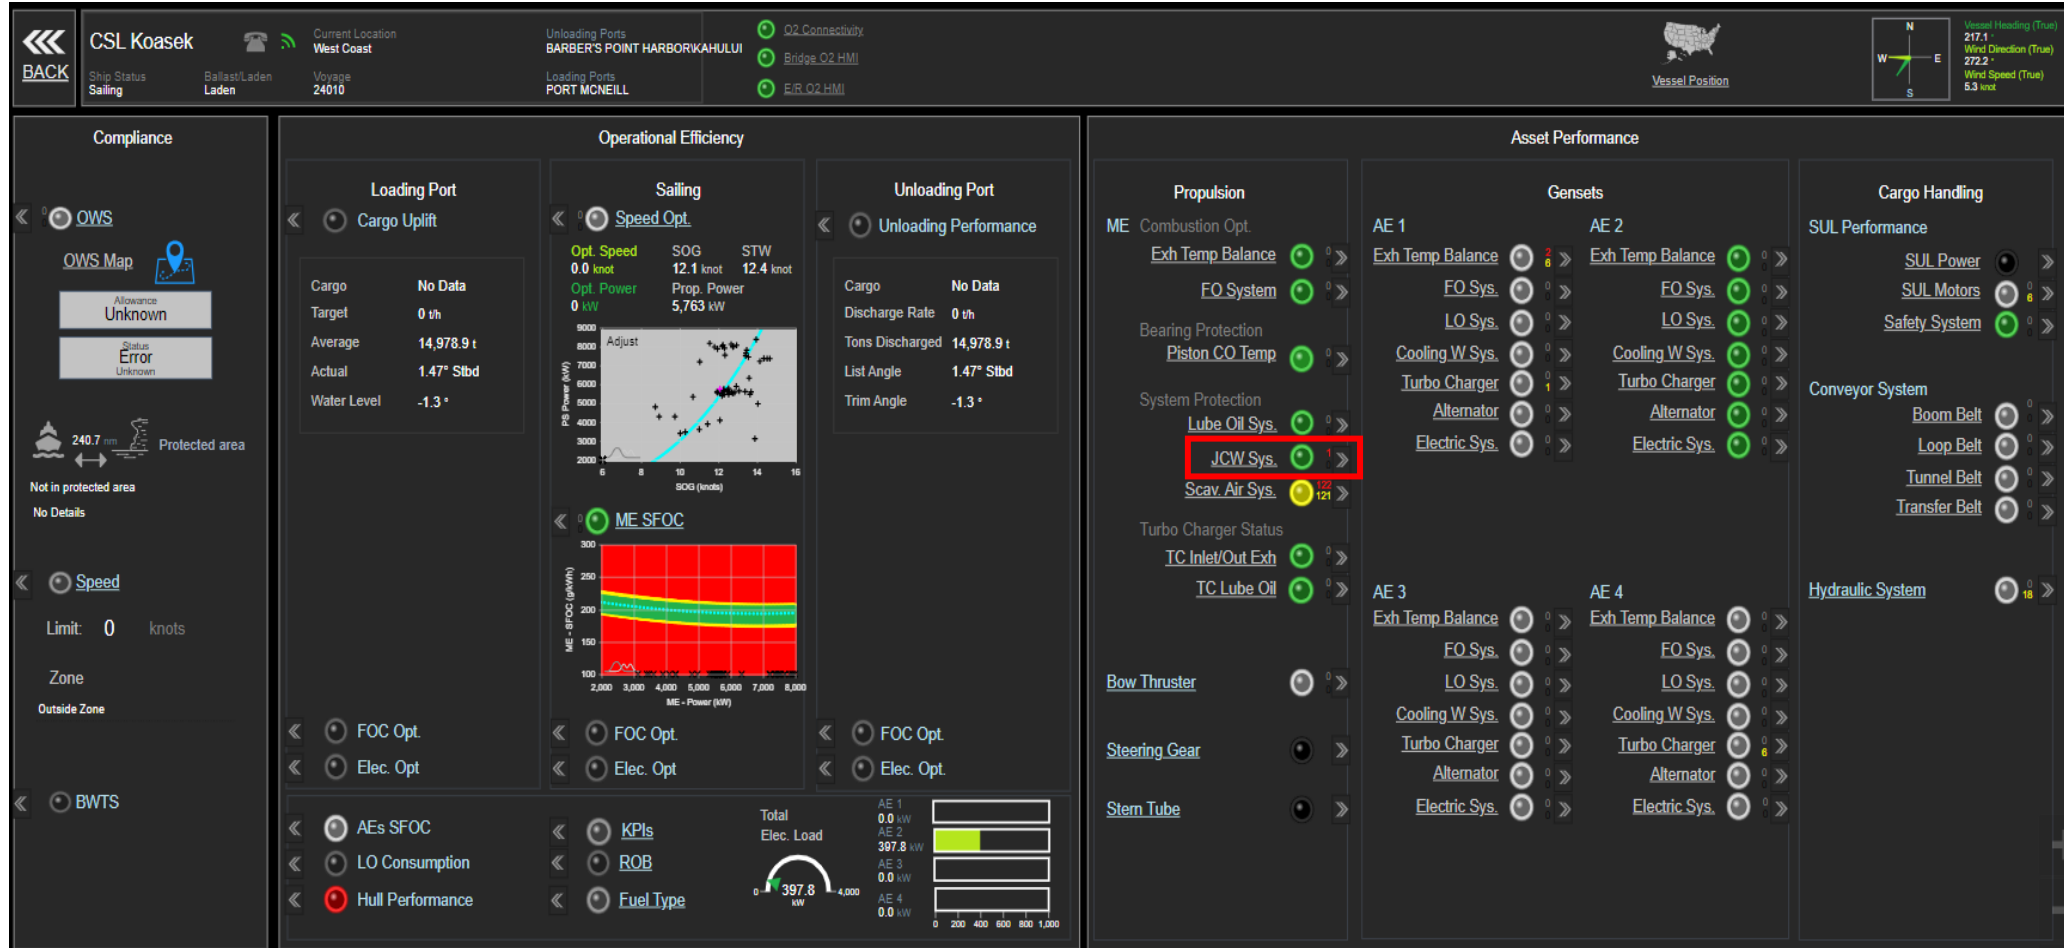

All averages are computed on when AE Load is between 200 kW and 600 kW

Anomaly Detection –

High Deviation in ME Jacket Cooling Water Outlet (Cyl. 4)

Temperature Reveals Cooling Chamber Clogging by Rubber Particles

Anomaly Detection –

High Deviation in ME Jacket Cooling Water Outlet (Cyl. 4) Temperature Reveals Cooling Chamber Clogging by Rubber Particles

O2 has detected the following trends related to ME Jacket Cooling Water Outlet Temperature(cylinder 4).
Please acknowledge the receipt of this notification and provide any findings related to the subject matter.

Anomaly Detection Details

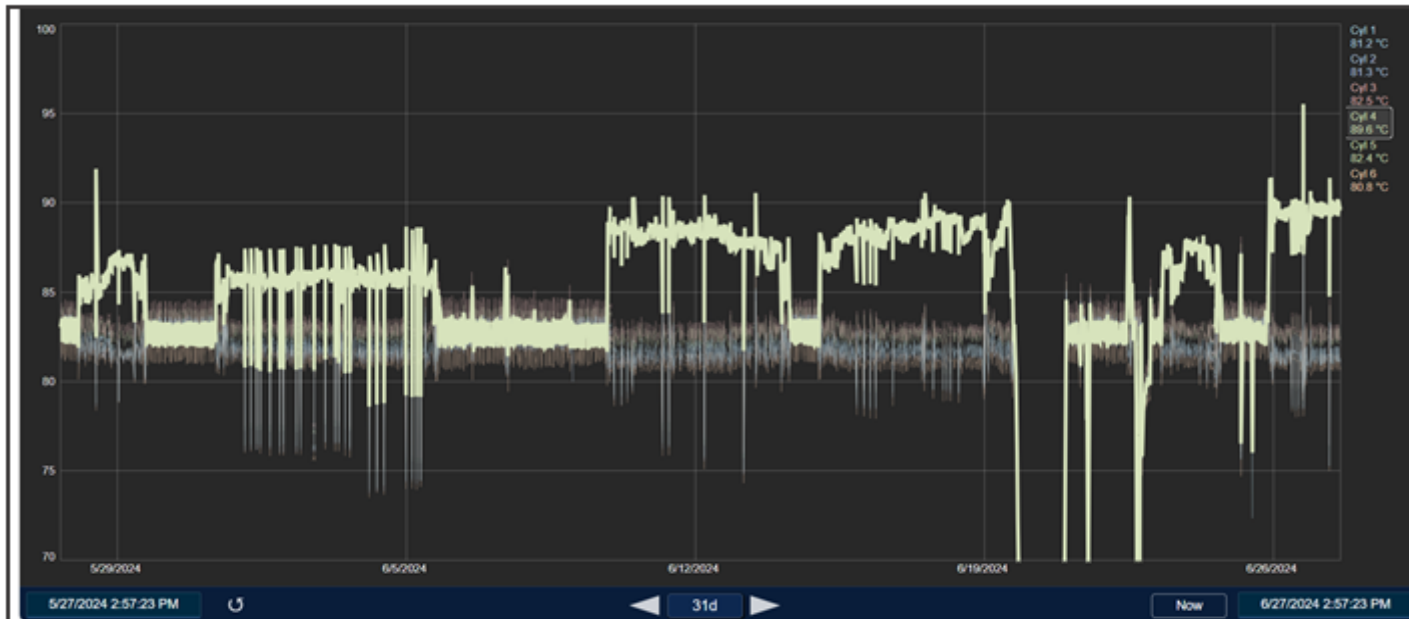

High deviation in ME Jacket Cooling Water Outlet (cylinder 4) Temperature

Possible Root Causes

- Electrical noise due to poor cable connection to card or terminal
- Cable, terminal, or relevant control module damage.
- Relevant I/B or Panel vibration

Attachment

- ME Jacket Cooling Water Outlet Temperature trends (all cylinders) (Last 31 days)

SUL Safety Alarms Feature

- O2 SUL Safety alarms feature aims to assist the crew in automatically recoding each time a safety switch, emergency stop or shutdown is activated.
- O2 displays the latest activation date and consequently the appropriate color with the longest standing alarm activation by default on the main dashboard.
- The color of an indicator displays the elapsed period since its activation:
 - **Green** < 60 days
 - **Yellow** > 60 days
 - **Red** > 90 days
 - **Gray** – Unavailable or ignored

The Path to NET – ZERO Vessels

CSL Group Inc. Achieve 29% Carbon Intensity reduction

Challenge

- Extremely aggressive targets
- Gap between vessel and office
- Frequent crew changes, availability of senior officers
- technology readiness
- Hard to get a holistic vision of our fleets

Solution

- Deployed AVEVA™ PI System™ to collect all vessel and other operational data. Leverage System to organize, standardize, represent and give the right insights to meaningful actions

Results

- **Deployed system on 40 plus vessels**
- **Considerable fuel savings and 24/7 monitoring of fuel consumption. Ex.: 8,233 mt of CO2 equivalent across 11 vessels**
- **Various failure avoidances – 300 Anomaly Detections found YTD**

Merci - Thank you

ABOUT AVEVA

AVEVA is a world leader in industrial software, providing engineering and operational solutions across multiple industries, including oil and gas, chemical, pharmaceutical, power and utilities, marine, renewables, and food and beverage. Our agnostic and open architecture helps organizations design, build, operate, maintain and optimize the complete lifecycle of complex industrial assets, from production plants and offshore platforms to manufactured consumer goods.

Over 20,000 enterprises in over 100 countries rely on AVEVA to help them deliver life's essentials: safe and reliable energy, food, medicines, infrastructure and more. By connecting people with trusted information and AI-enriched insights, AVEVA enables teams to engineer efficiently and optimize operations, driving growth and sustainability.

Named as one of the world's most innovative companies, AVEVA supports customers with open solutions and the expertise of more than 6,400 employees, 5,000 partners and 5,700 certified developers. The company is headquartered in Cambridge, UK.
