PARIS

AVEVA World 2024

AI-Driven Integrated Engineering Management Beyond Imagination

Toyo Engineering Corporation
DXoT Promotion and Planning Department

Katsunobu Mori

2024.10.16

Presentation Agenda

- 01 Digital Transformation Strategy
- 02 Data Centric Engineering
- 03 Digital Twin to support Data-Driven
- 04 Digital Twin Journey
- 05 Q & A

Presentation Agenda

- 01 **Digital Transformation Strategy**
- 02 Data Centric Engineering
- 03 Digital Twin to support Data-Driven
- 04 Digital Twin Journey
- 05 Q & A

Corporate Profile

Comprehensive Engineering Company established in **1961**.

Process Plants

- Oil & Gas Production
- FPSO / Offshore Platform
- LNG

Non-Process Plants

- Power Plants
- Transportation
- Environmental
- Pipeline Water Treatment

...

...

Global Network (10 Countries)

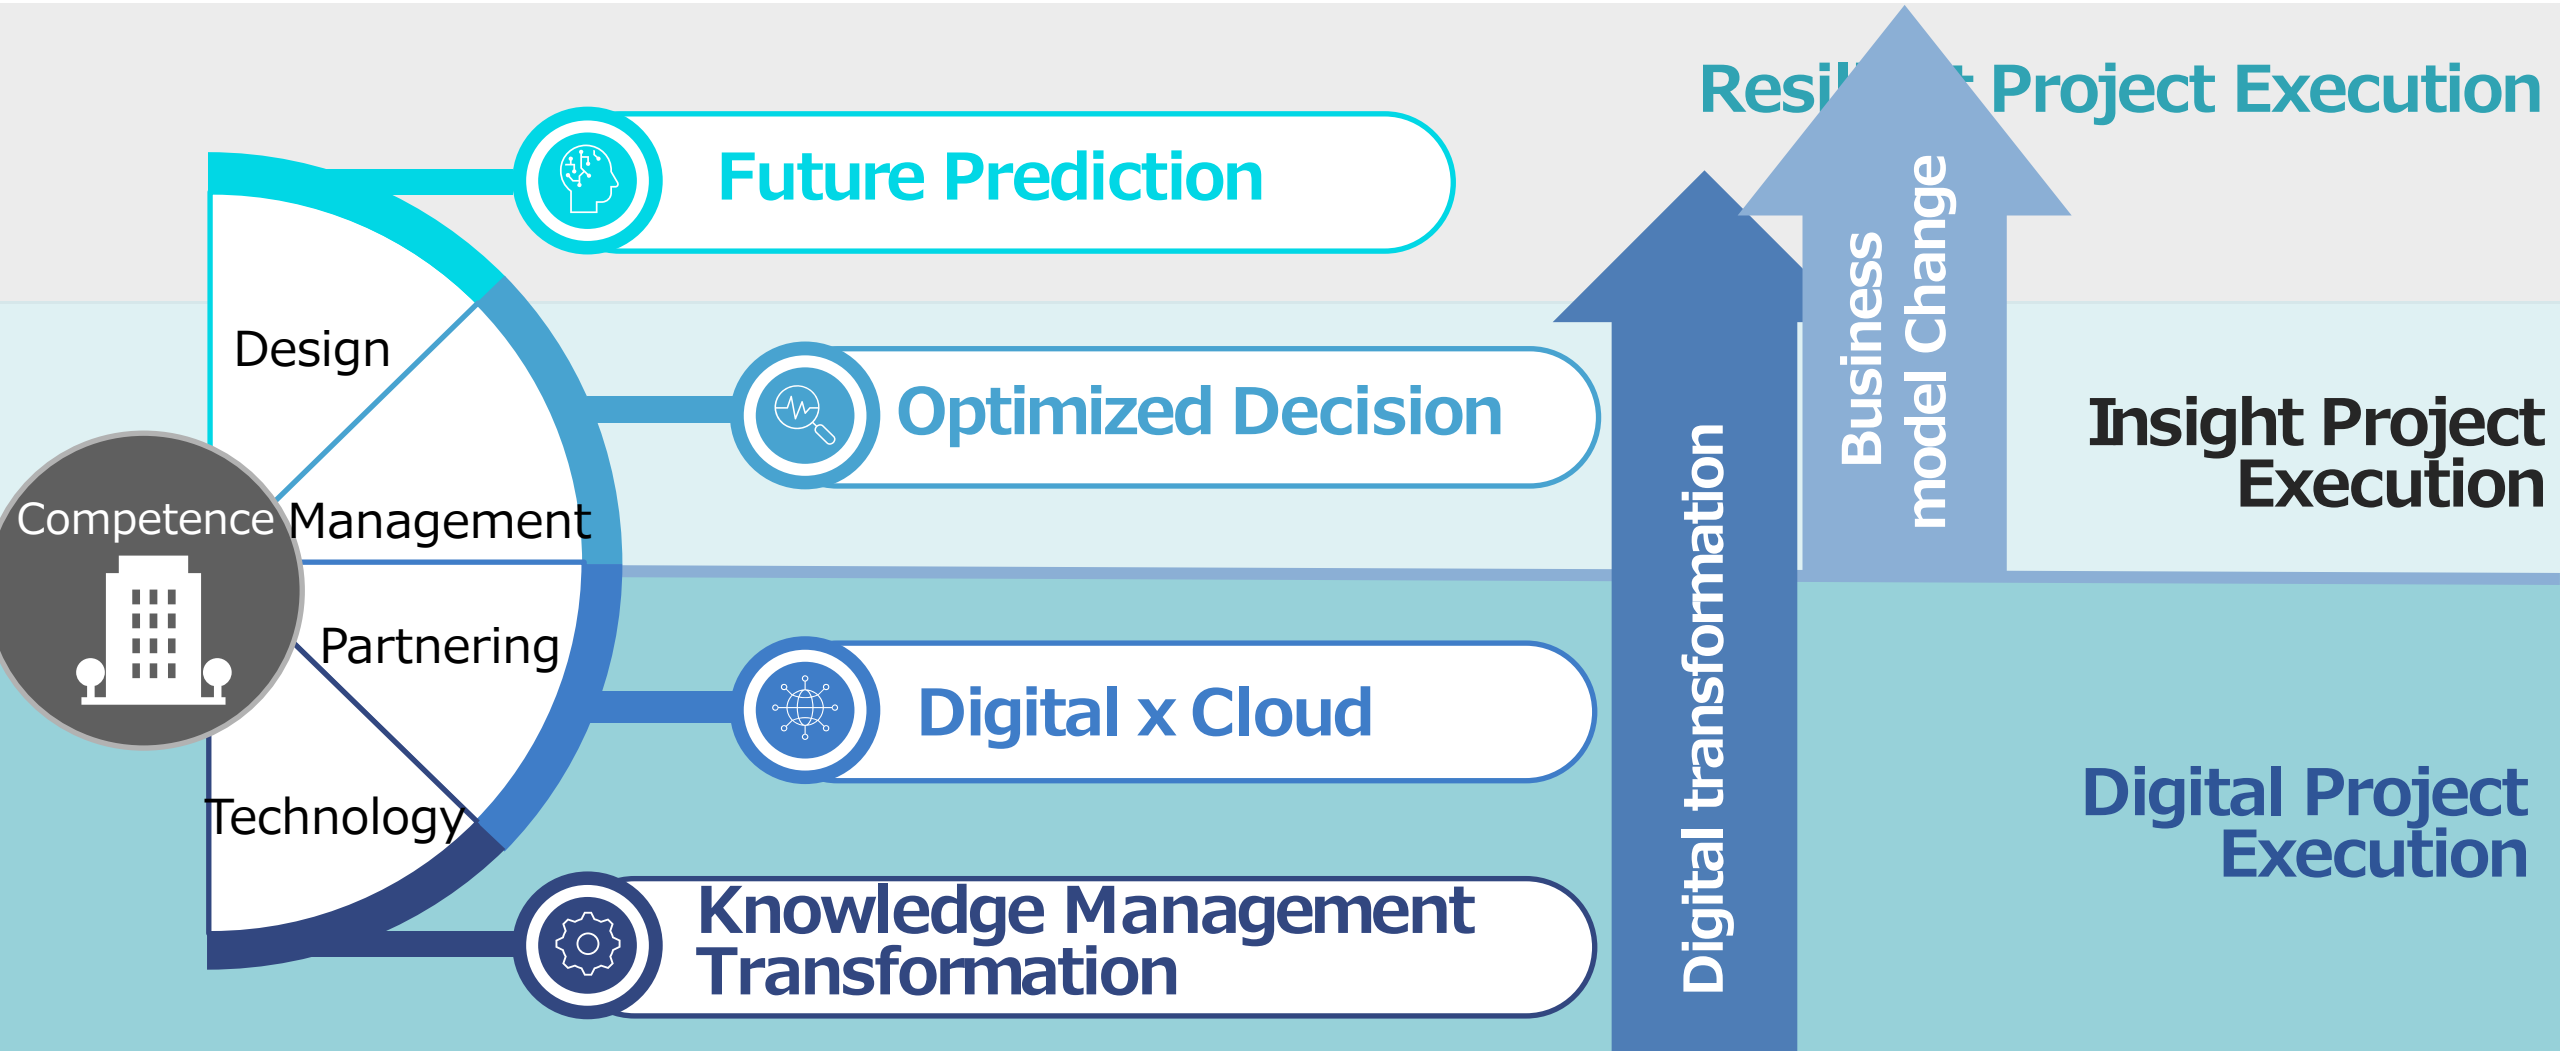

Number of employees: 7,243

(Including 182 employees at domestic affiliates)

As of June 2024

Digital Transformation Strategy

Core competence x **Digital Transformation** to evolve project execution methods.

Presentation Agenda

- 01 Digital Transformation Strategy
- 02 Data Centric Engineering**
- 03 Digital Twin to support Data-Driven
- 04 Digital Twin Journey
- 05 Q & A

Engineering Digital Transformation

04 Digital Twin

Engineering Quality Visualization in Real Time

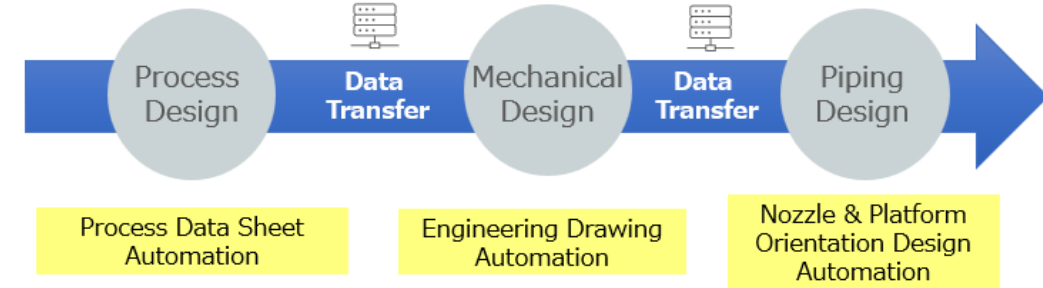

To 6 Times Productivity

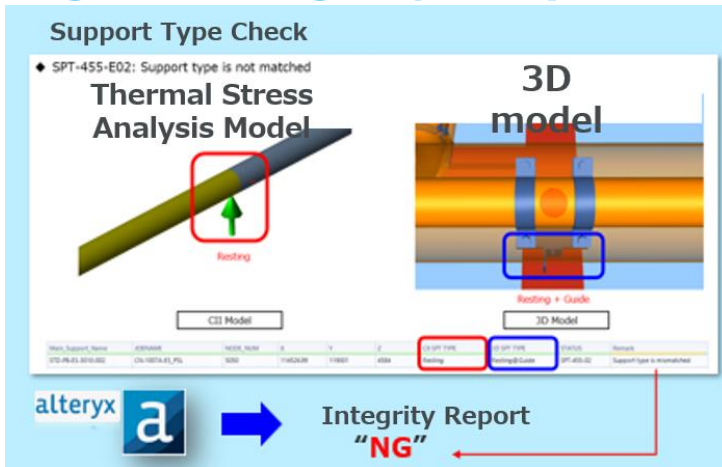

03 BPR Value

BPR combining Individual automations

01 Quality Improvement

Digital Design Quality Check

100 rules established

02 High Efficiency Design Automation

Pipe support design MH 50% reduction

Presentation Agenda

- 01 Digital Transformation Strategy
- 02 Data Centric Engineering
- 03 Digital Twin to support Data-Driven**
- 04 Digital Twin Journey
- 05 Q & A

Data-driven strategies to improve the decision-making quality

Enables accurate visualization of the current situation, improves predictive accuracy through data-driven hypothesis-testing, and supports decision-making through “rule of thumbs”.

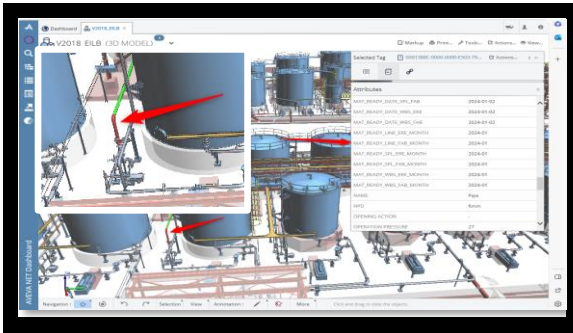

Engineering Digital Twin powered by AI

Implementation of data-driven methods, prediction and simulation, optimization, dynamic planning, and diversity assessment as accurate decision support.

Prediction and Simulation

Workfront stability prediction

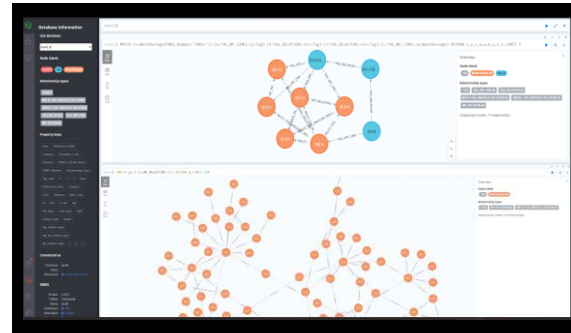

Optimization

Multiple schedule options per project strategy

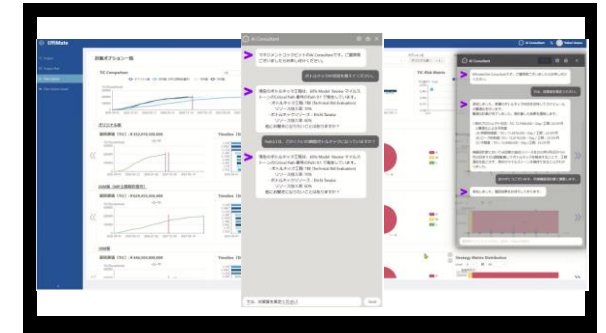

Dynamic Planning

Dynamic constraint management by 3D information

Diversity Assessment

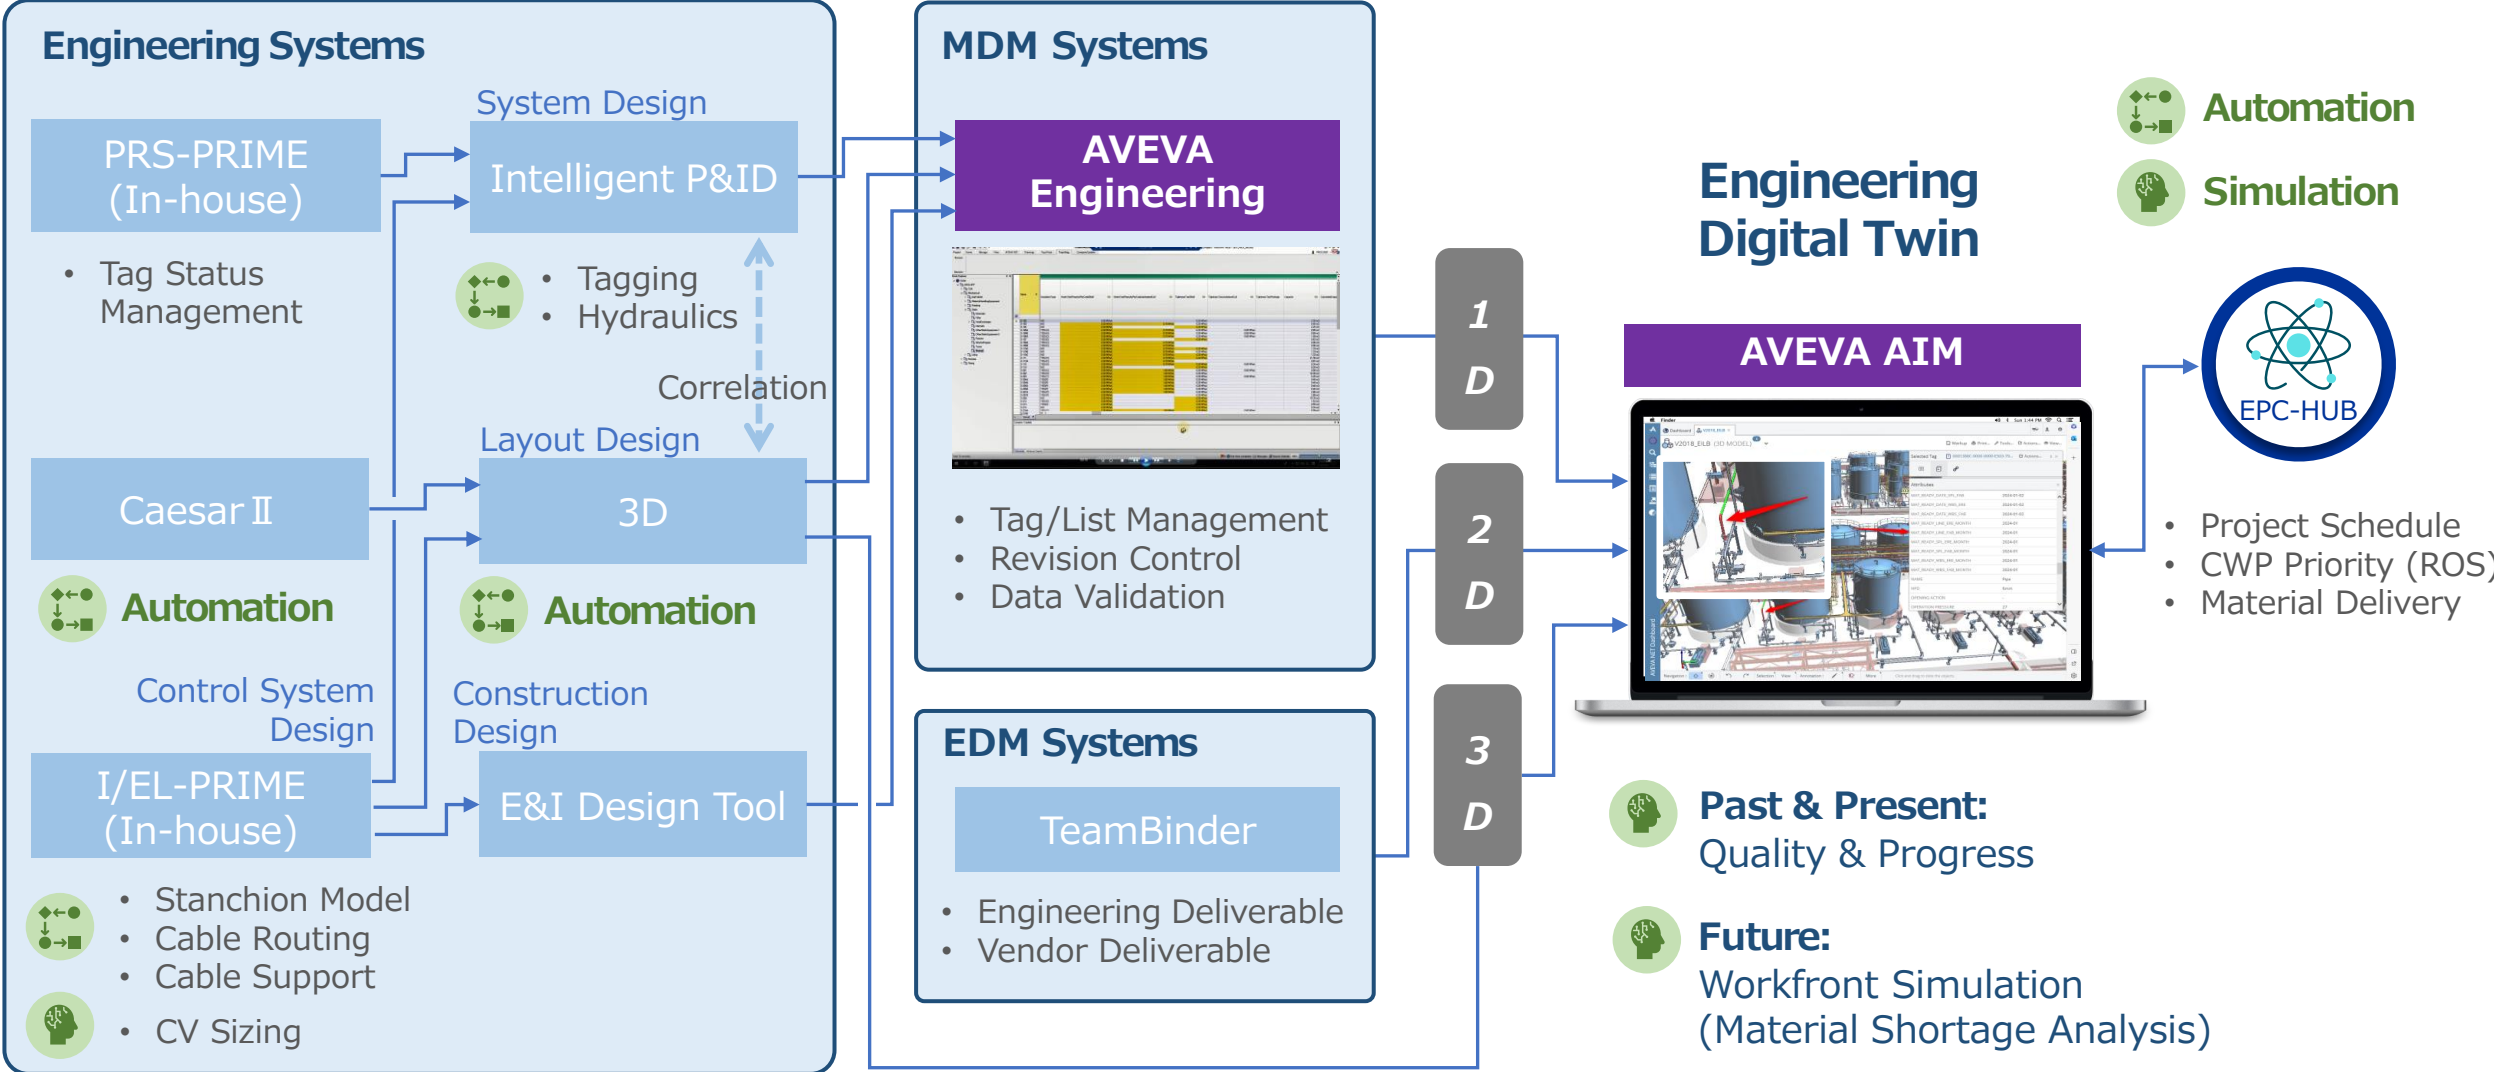

Generative AI summarizes each output data from various perspectives

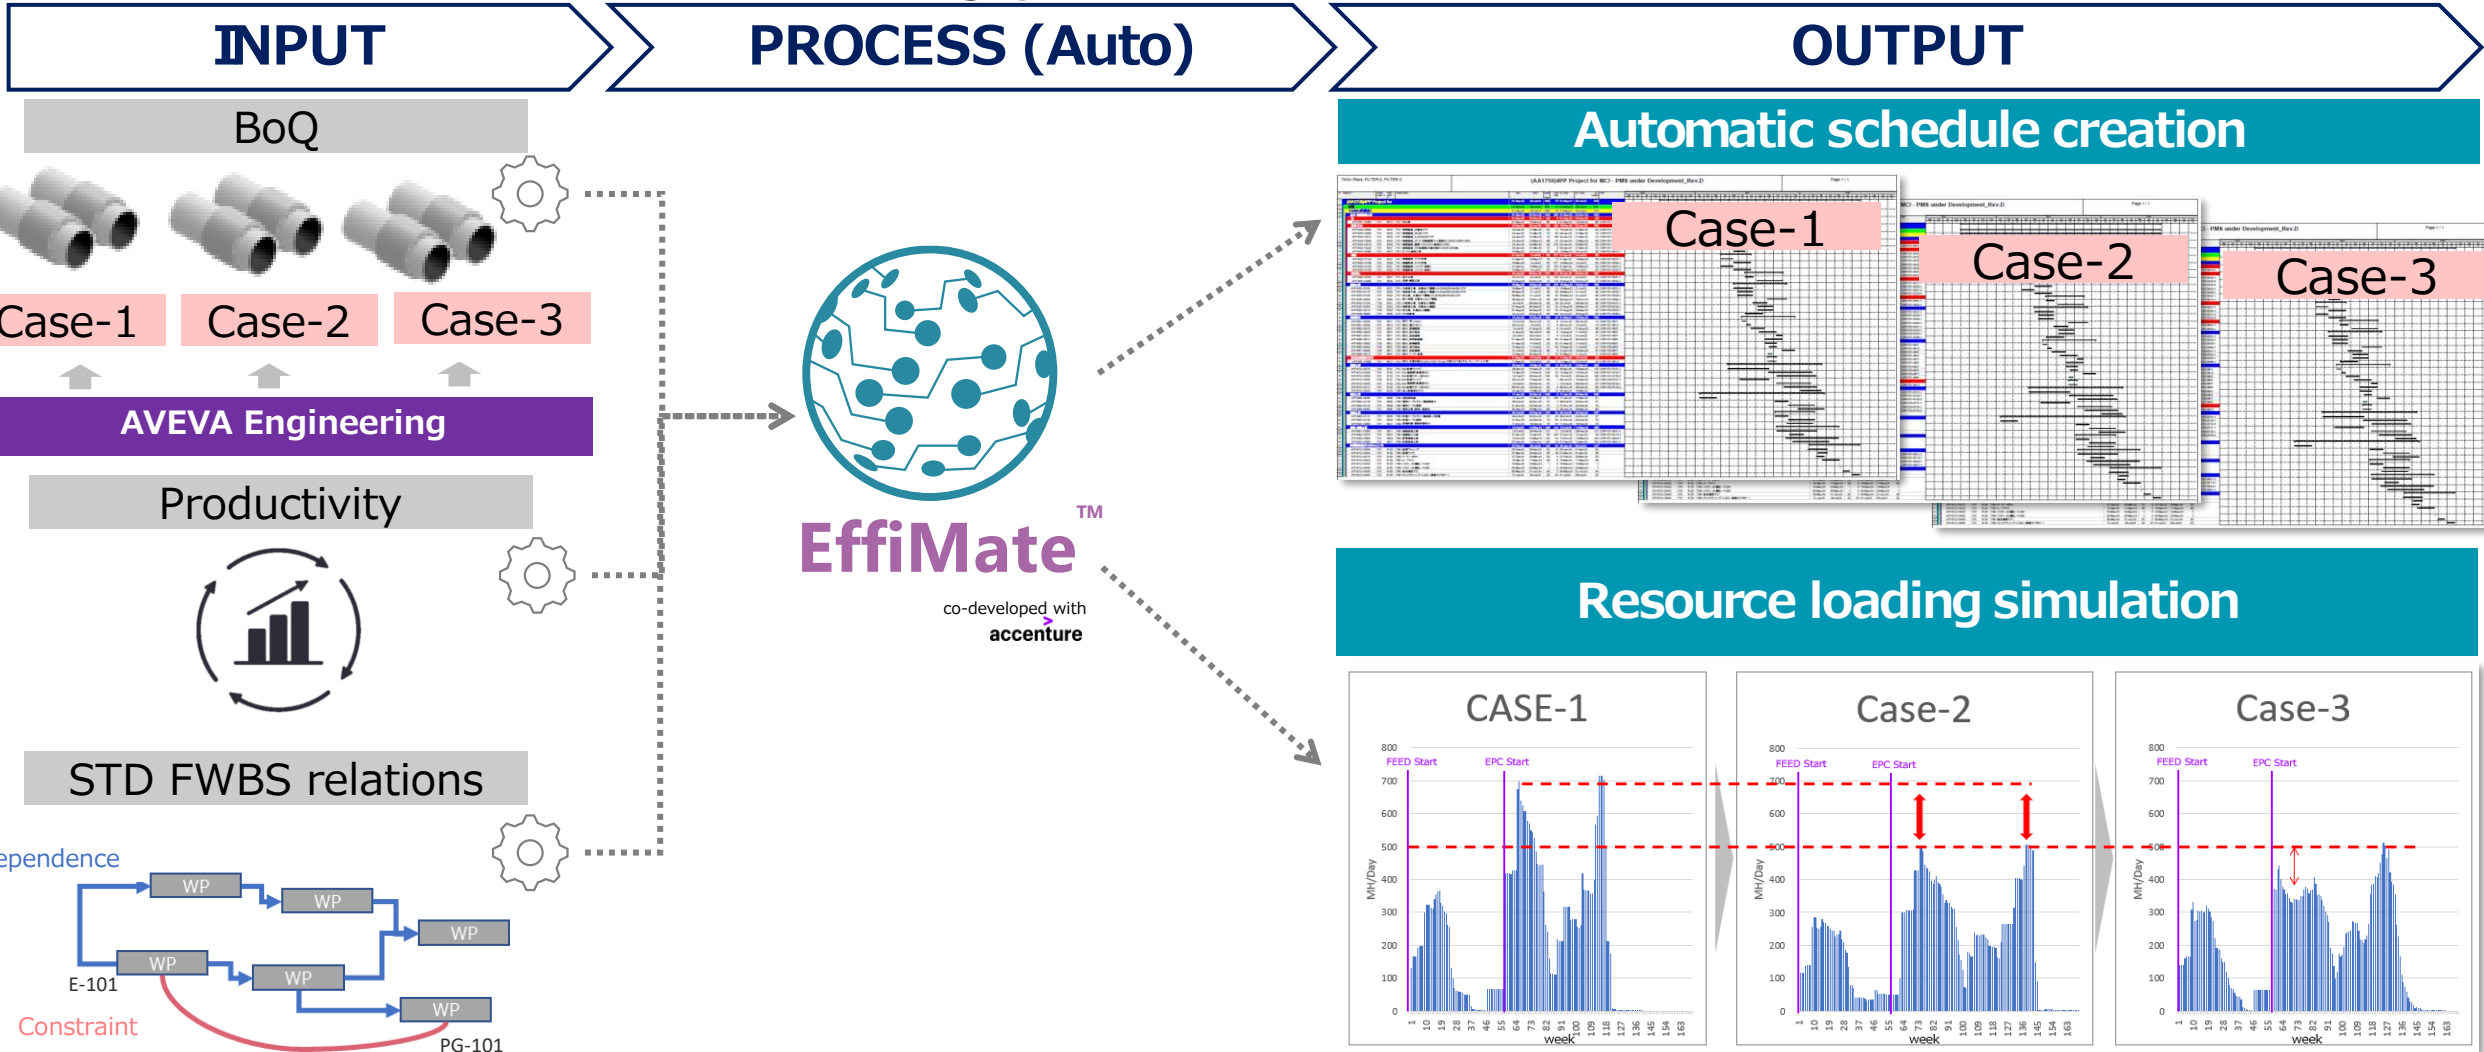

Simulation at Engineering Digital Twin

Achieving simulation of past, present, and future by the aggregated data.

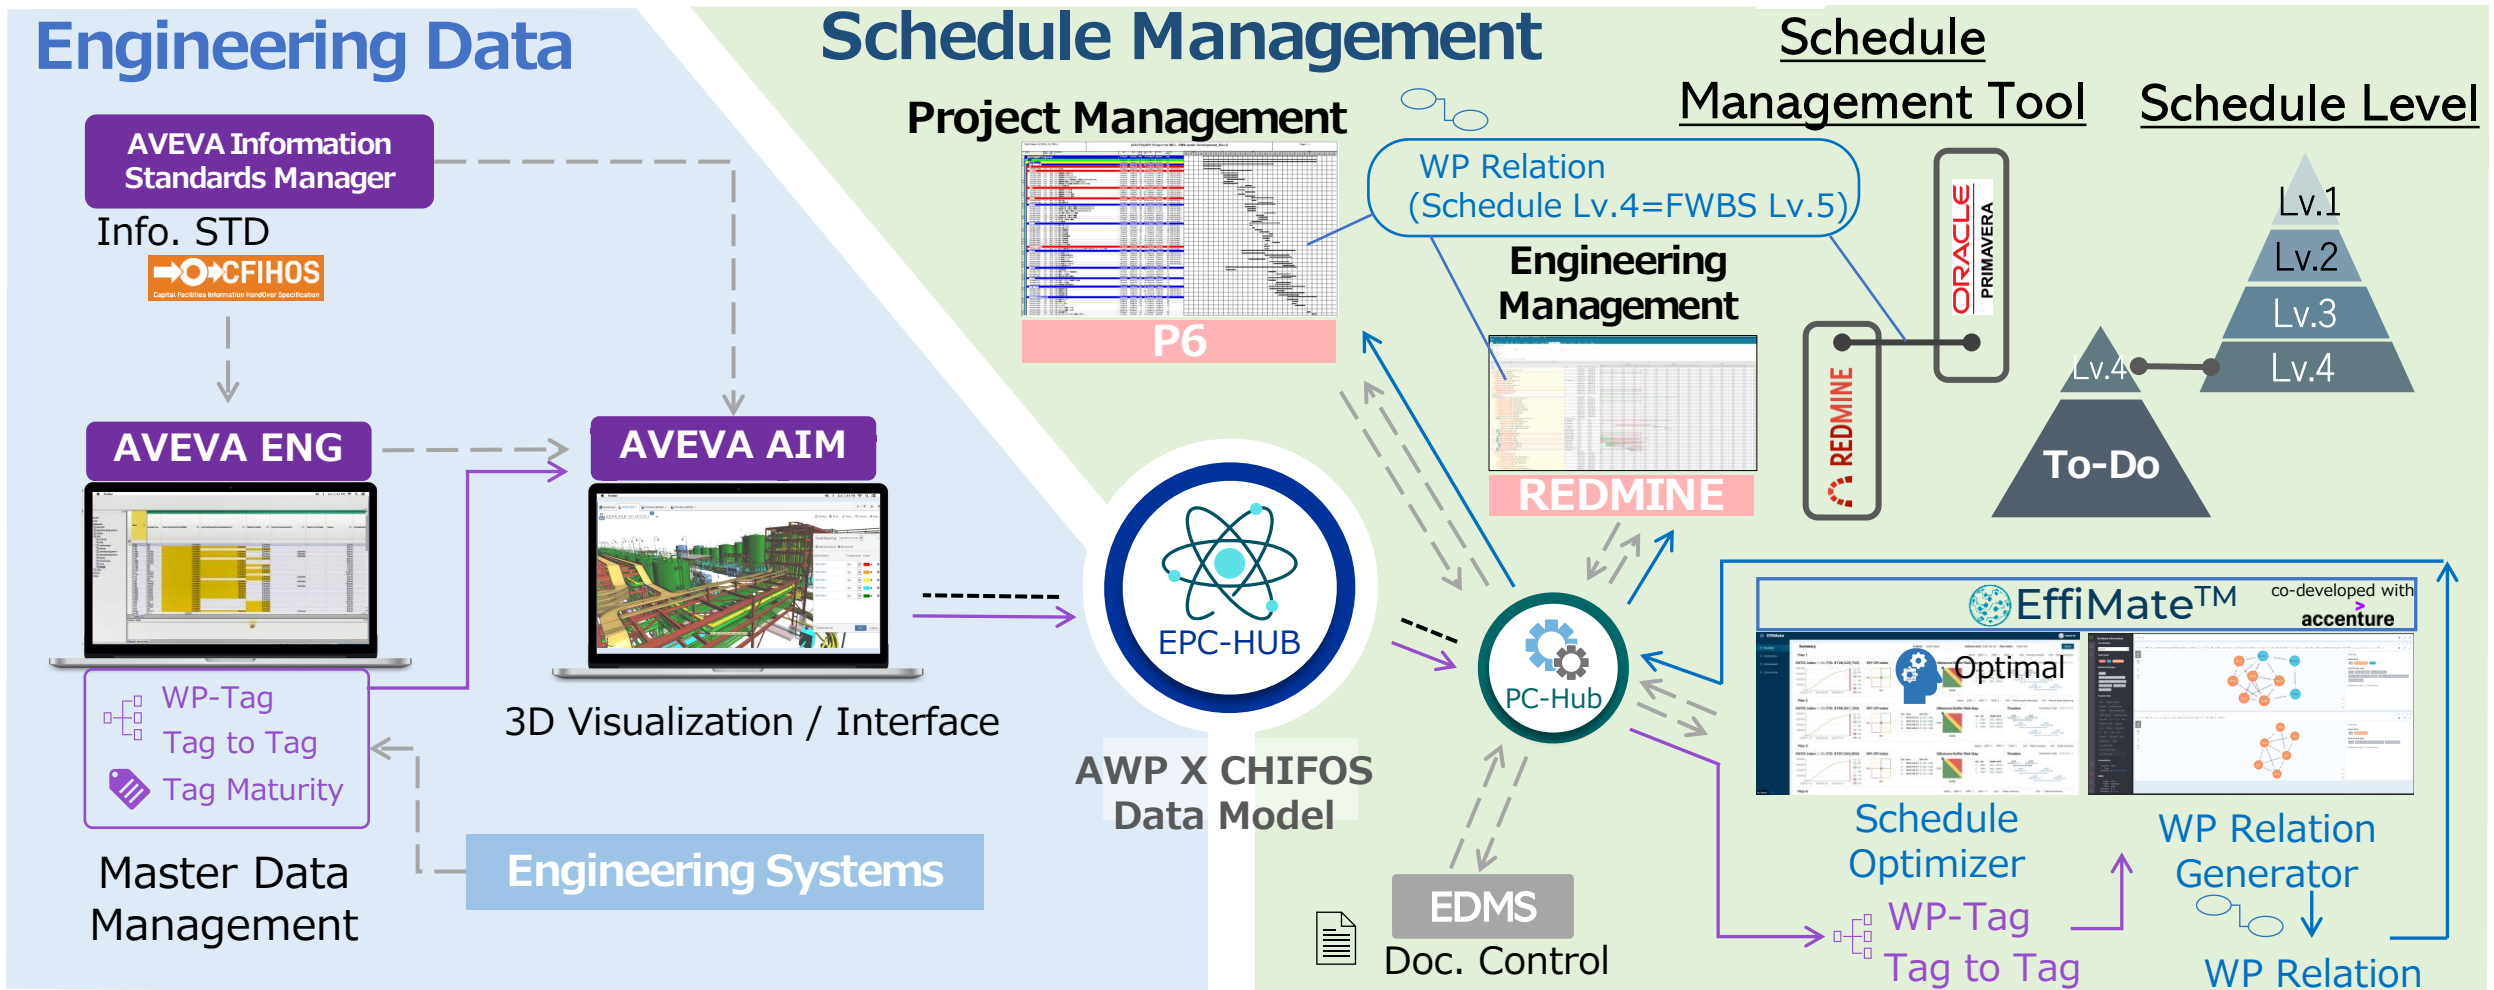

Engineering X Schedule Optimization Simulator

Effimate is an schedule optimizer and generate various optimized schedule scenarios and resource loading plan.

Dynamic Engineering Schedule Management

Work package relation for schedule management is created through WP-Tag, Tag-to-Tag relation data maintained in AVEVA ENG/AIM. Work package relation is utilized for schedule management in REDMINE/P6.

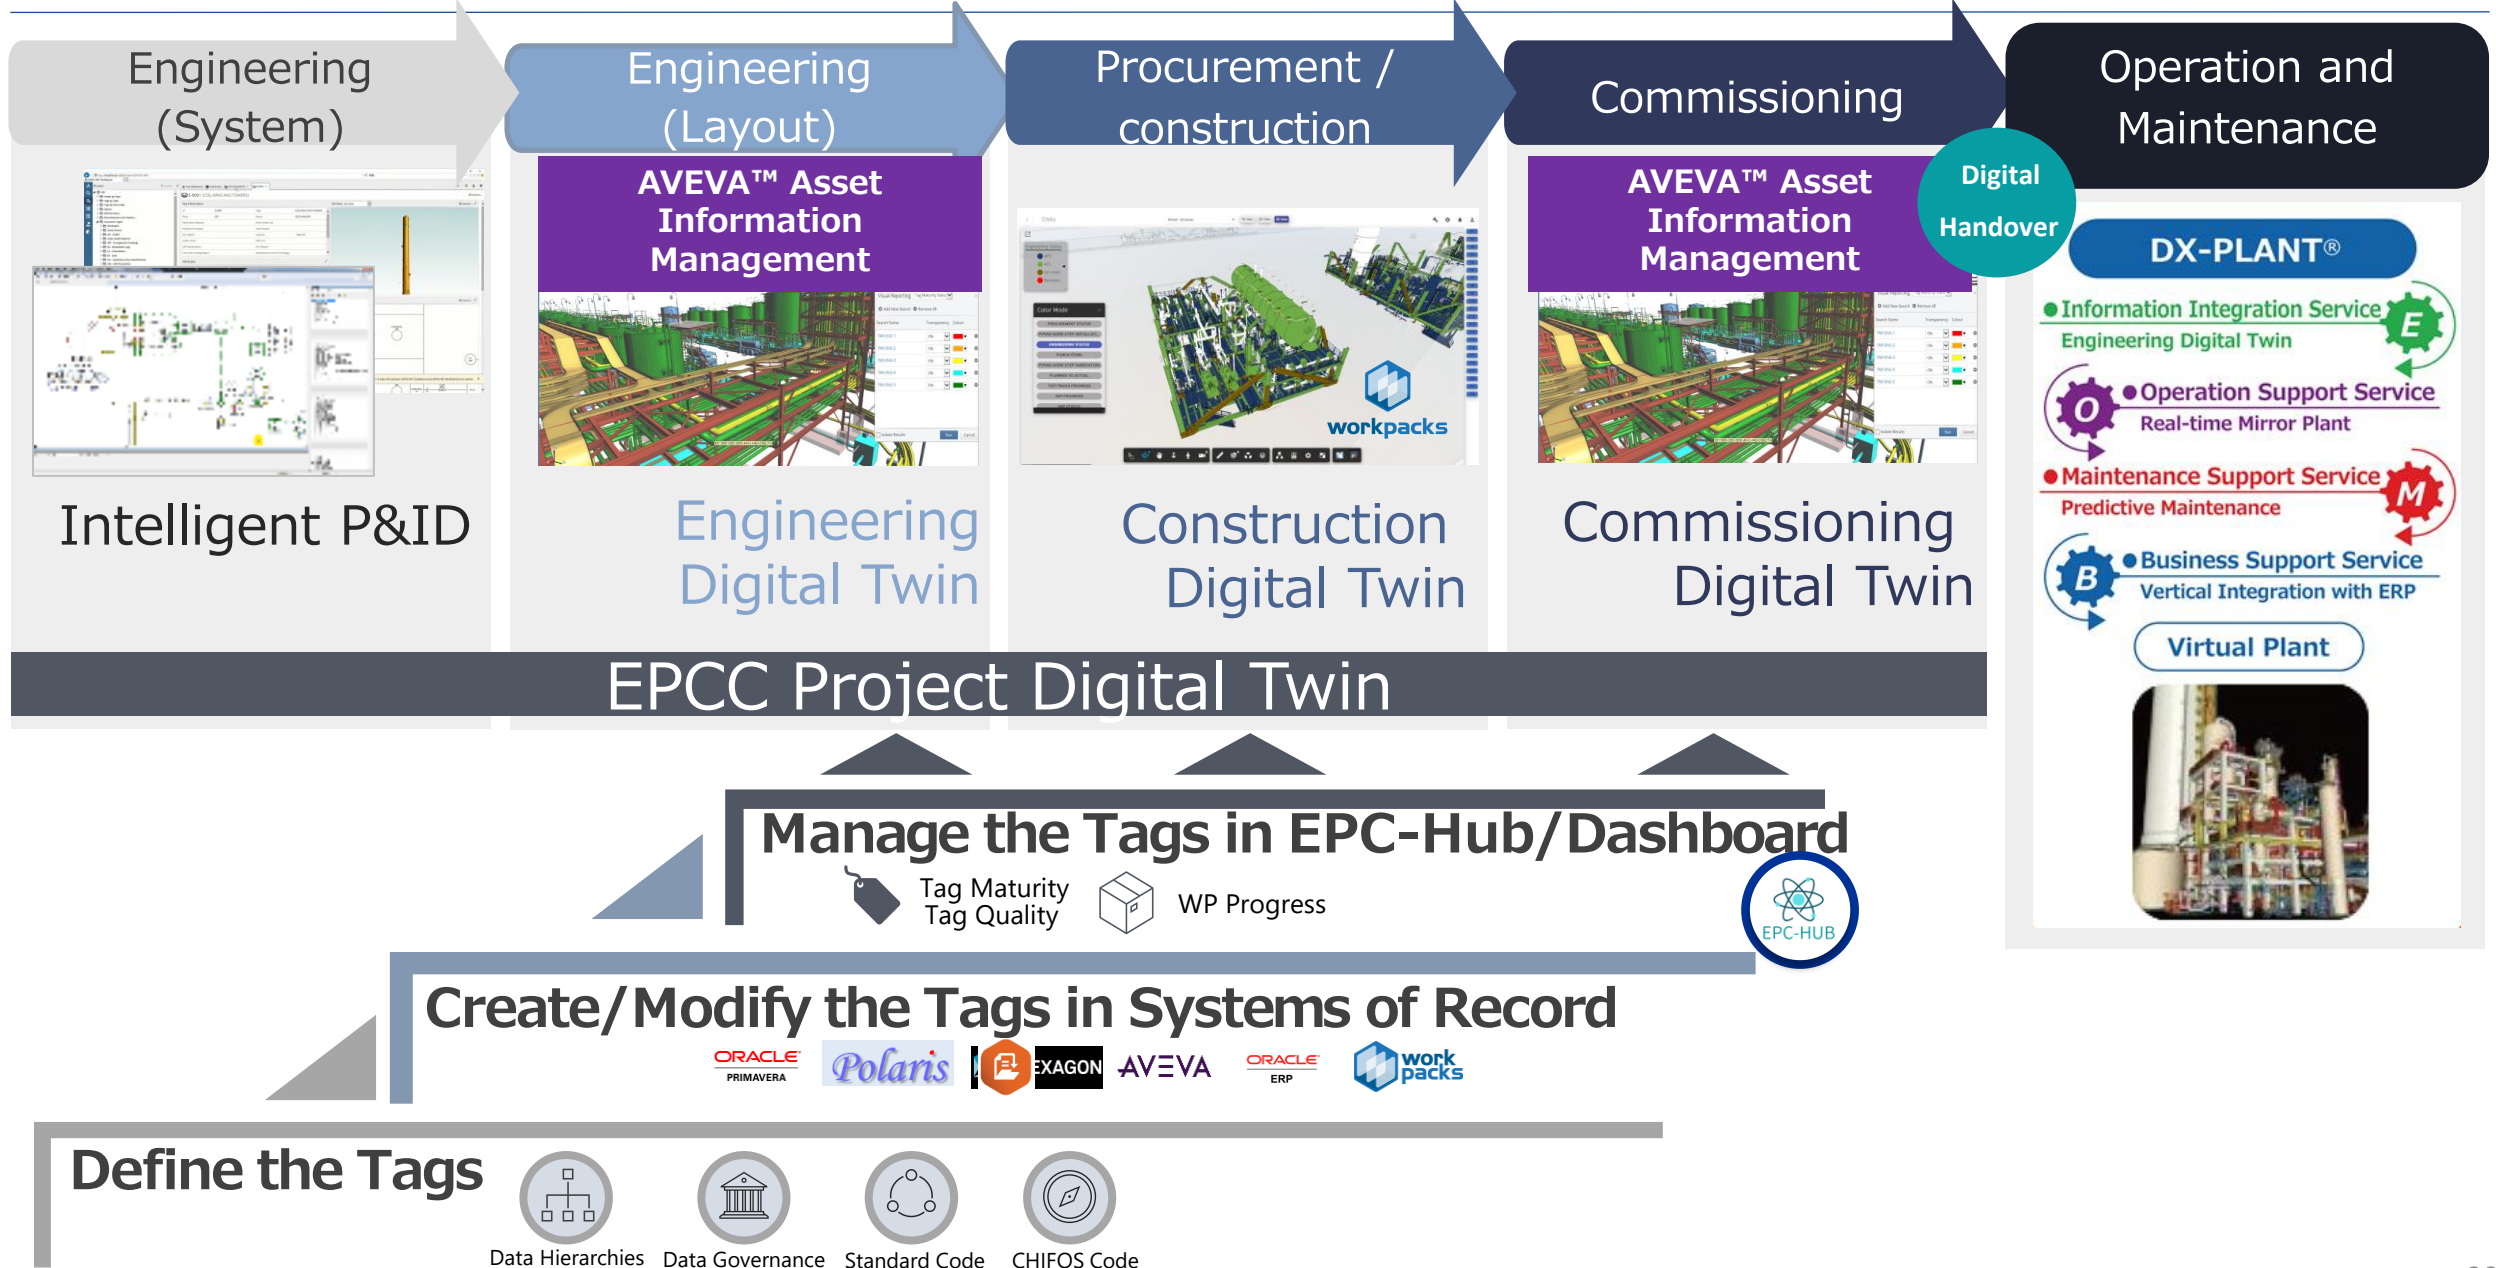

Dynamic Engineering Constraint Analysis by AI

Presentation Agenda

- 01 Digital Transformation Strategy
- 02 Data Centric Engineering
- 03 Digital Twin to support Data-Driven
- 04 Digital Twin Journey**
- 05 Q & A

Digital Twin to realize Plant Life Cycle

Ecosystems / Engineering ⇔ Construction

Digital twin has expanded into the construction domain by integrating engineering data with construction processes.

SUCCESSFUL

1 Year
Pilot
Project

Processed more than

0.5 TB
of TOYO Data

Demonstrated the full capabilities of **WorkPacks**, integrating seamlessly with **TeamBinder**, **iCon**, and **FRMS** applications.

In 10 months, alongside TOYO we redefined efficiency. Fully Automated DTs.

100's
OF HOURS OF MANUAL WORK SAVED.

Administrator Proficiency

Toyo administrators have achieved proficiency in independently operating **WorkPacks**, ensuring long-term sustainability and efficiency.

We have around

35+

flows to capture input and Output Data from and To Digital Threads

Dramatic

Time Reduction

WorkPacks has dramatically reduced the time required for creating packages, cutting down from several hours to just minutes, leading to increased productivity and faster project delivery.

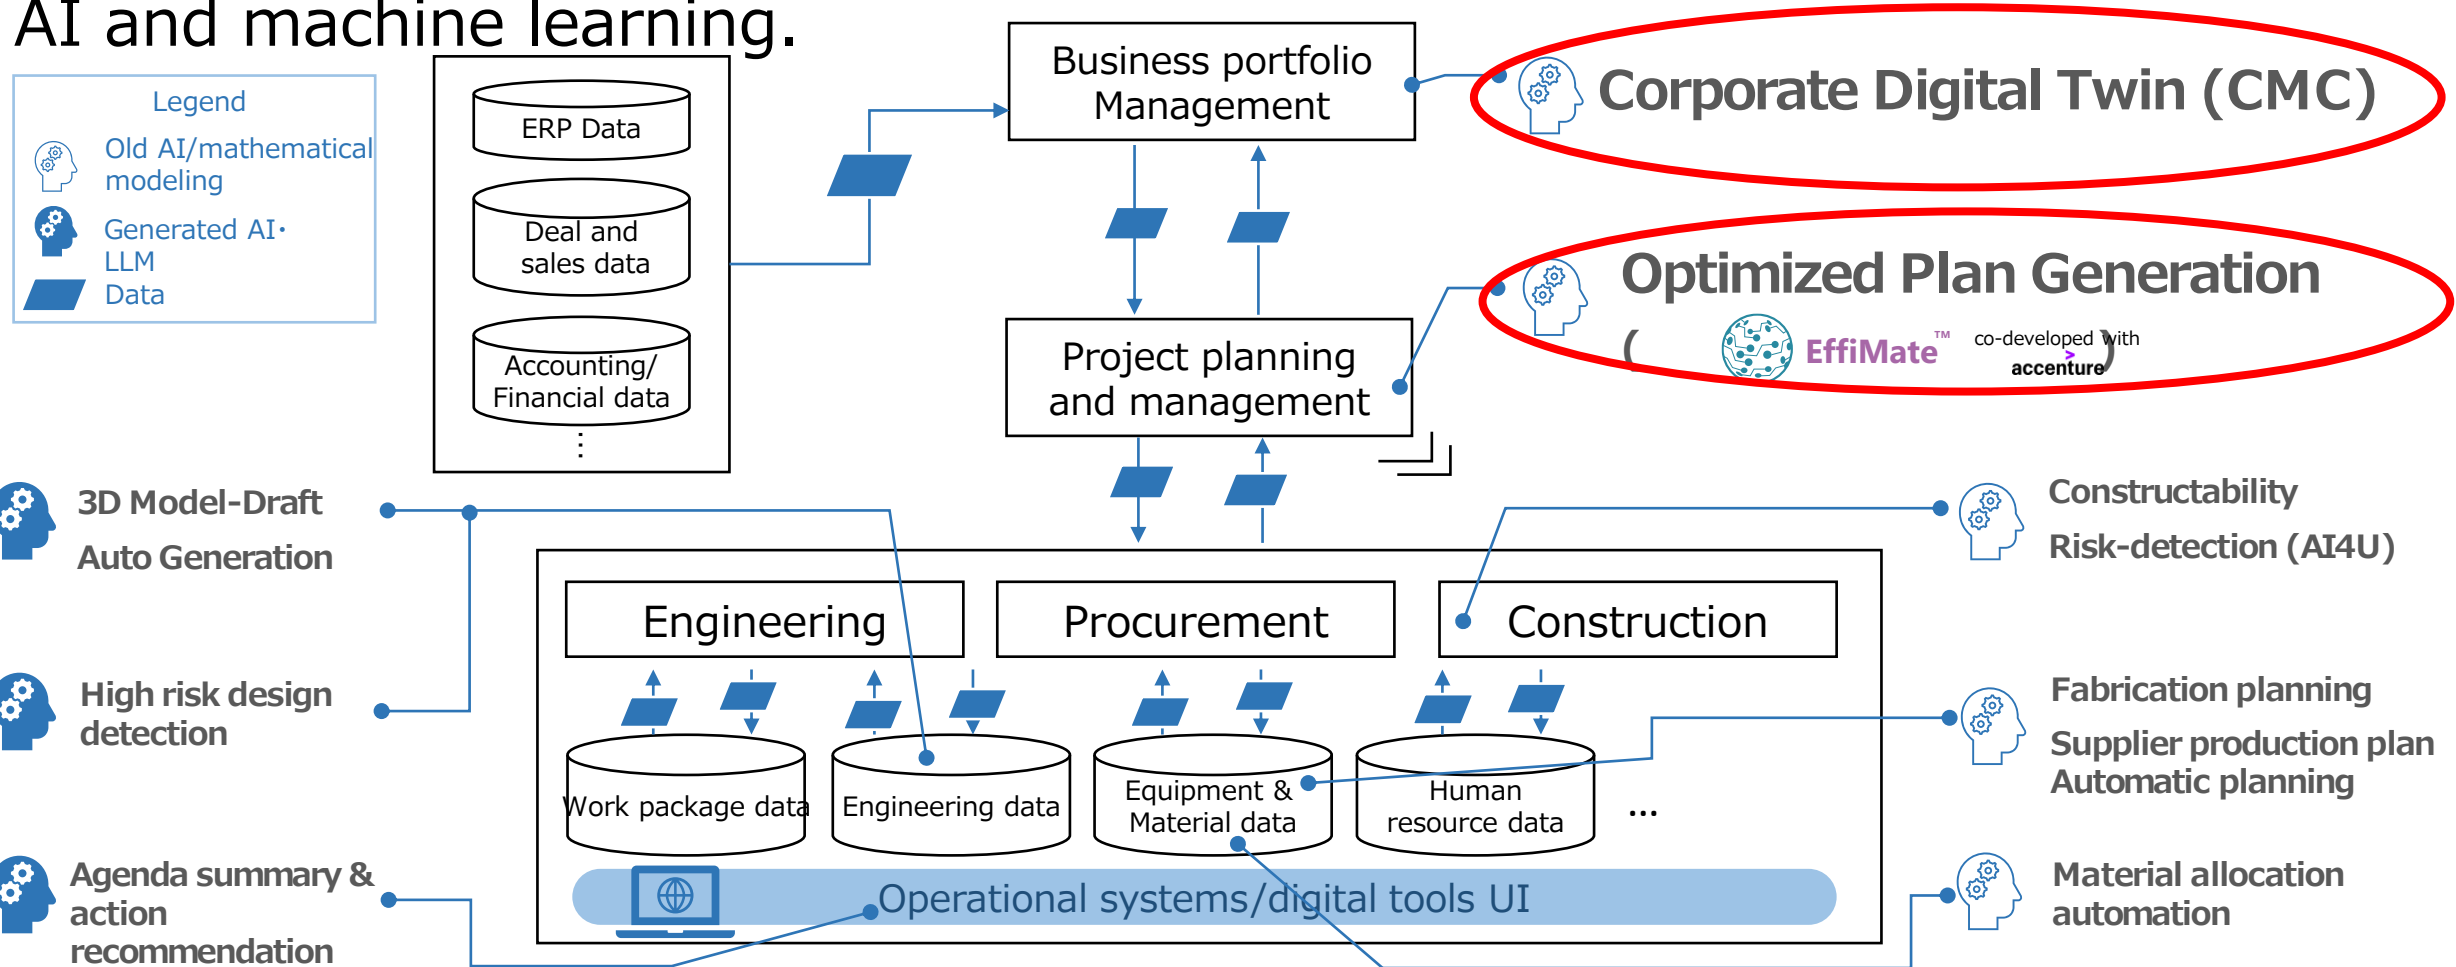

India's Project

First production deployment of **WorkPacks** in **India** on the Project, marking a significant milestone in **TOYO's** digital transformation journey.

Corporate Digital Twin

Digital twins is enabled by digitalizing business processes and creating standardized data models, which support advanced data utilization through AI and machine learning.

At present, more than dozens of AI·ML and mathematical models are incorporated into the business and all data is integrated.

6 Times Productivity up Challenge by 2025

Now 50% Progress Realized

Challenge

- Integrated multi-dimensional data (1D to 7D) across various divisions and disciplines.
- Achieved vertical penetration of the value chain within the corporate hierarchy, including branch companies.
- Expanded the value chain horizontally beyond traditional external companies.

Solution

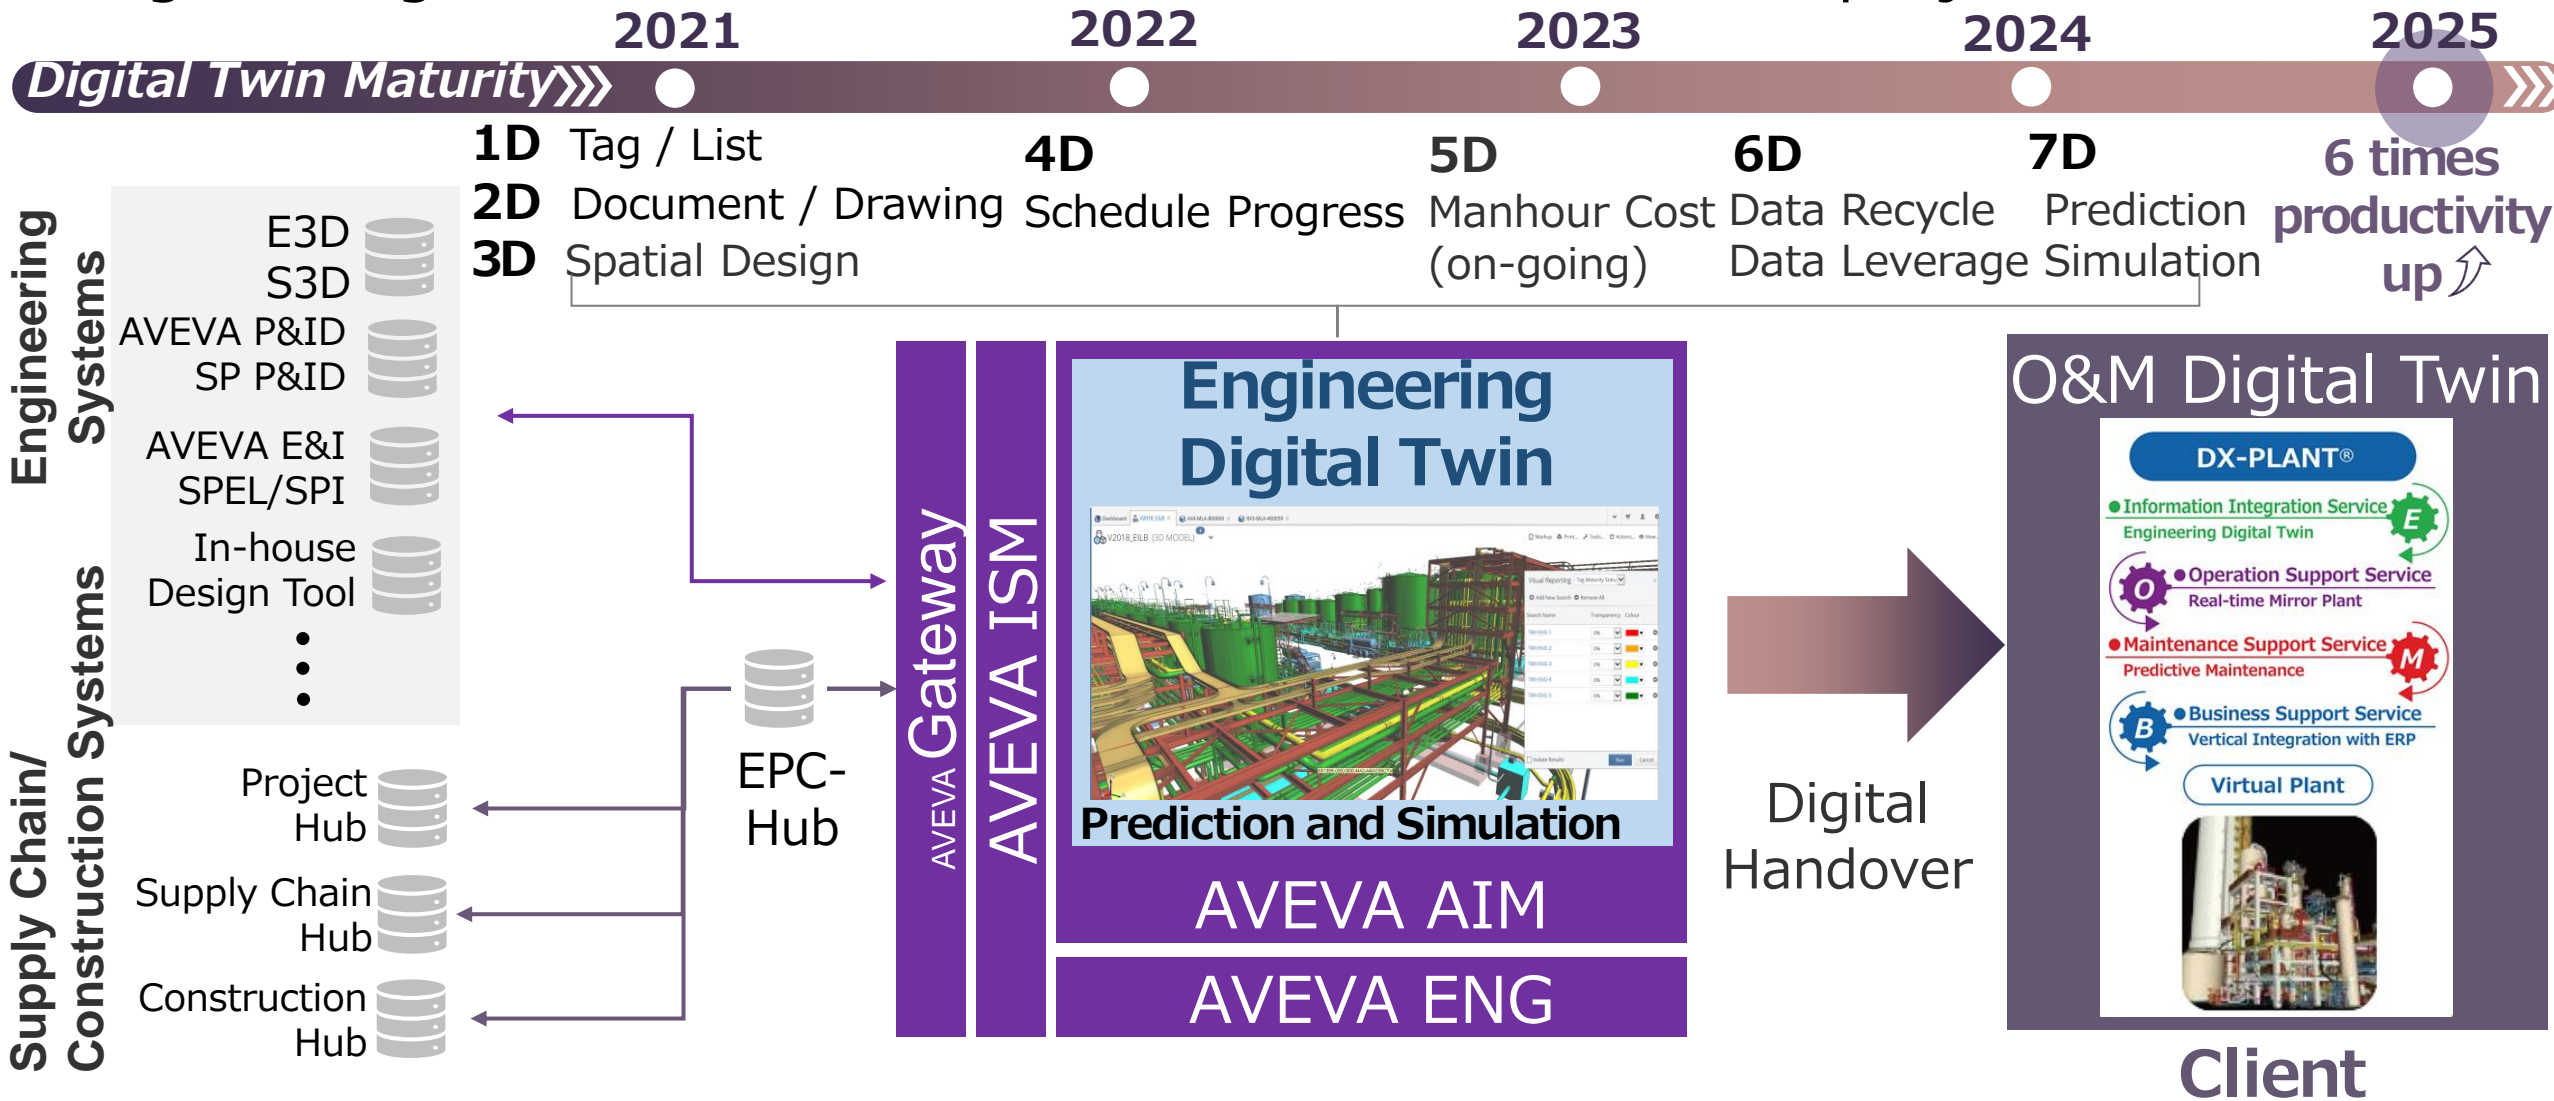

- Introduced AVEVA Suites (AVEVA ENG/AIM, E3D, P&ID, E&I) with Customization
- Integrated External, In-house software with AVEVA ENG/AIM with Optimization

Results

- Realized Data Centric Engineering Foundation by AVEVA Suites
- Realized 26% Engineering MH Reduction by AVEVA Suites with Other Solution
- Currently, dozens of AI/ML models and mathematical models are integrated into operations and data consolidation

Digital Twin Load Map

3D Model is linked to EPCC data, visualizing the linked data including engineering status with risk and schedule simulation for project execution.

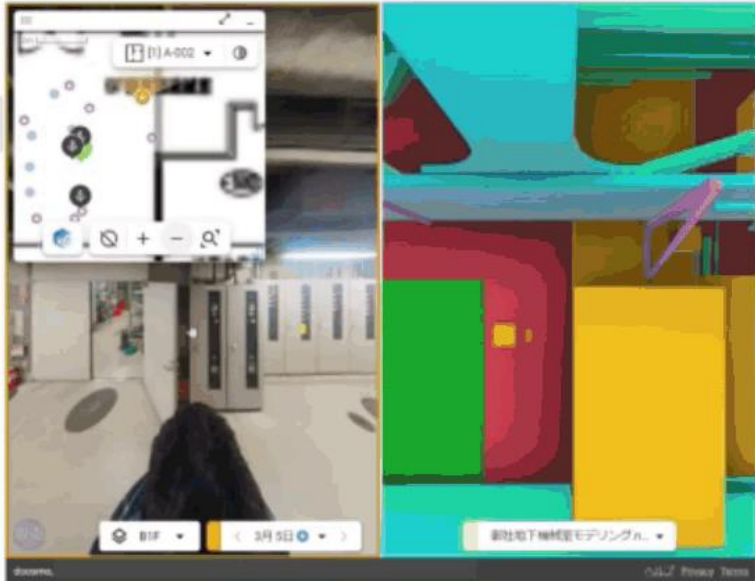

Presentation Agenda

- 01 Digital Transformation Strategy
- 02 Data Centric Engineering
- 03 Digital Twin to support Data-Driven
- 04 Digital Twin Journey
- 05 Q & A
