# Smart Data, Smarter Recovery.

Ok Tedi's AVEVA™ PI System™ Journey with  
Mipac

# Ok Tedi Mining Limited and Mipac partner for co-development

- Ok Tedi Mining Limited (OTML) is a 100% PNG-owned company and contributed 7.4% to the nation's economy.
- It mines copper, gold and silver at Mt. Fubilan in the Western Province of Papua New Guinea.
- OTML operates the longest-running open-pit mining 240kt of overburden and 60kt of ore daily at a rate of 24Mtpa.

- Our mission is to provide high-quality solutions to enhance operational performance and improve our clients' productivity, safety and efficiency.
- A global leader in operational technology, control systems and engineering services.
- Combine our operational experience, engineering and software development capabilities to deliver tailored solutions.
- AVEVA Partner with AVEVA PI Accredited Engineers.

Over the past

3

decades Mipac's team of

125

engineering professionals have delivered more than

720

projects across

55

countries for more than

110

site/operations

# 1.

## Background

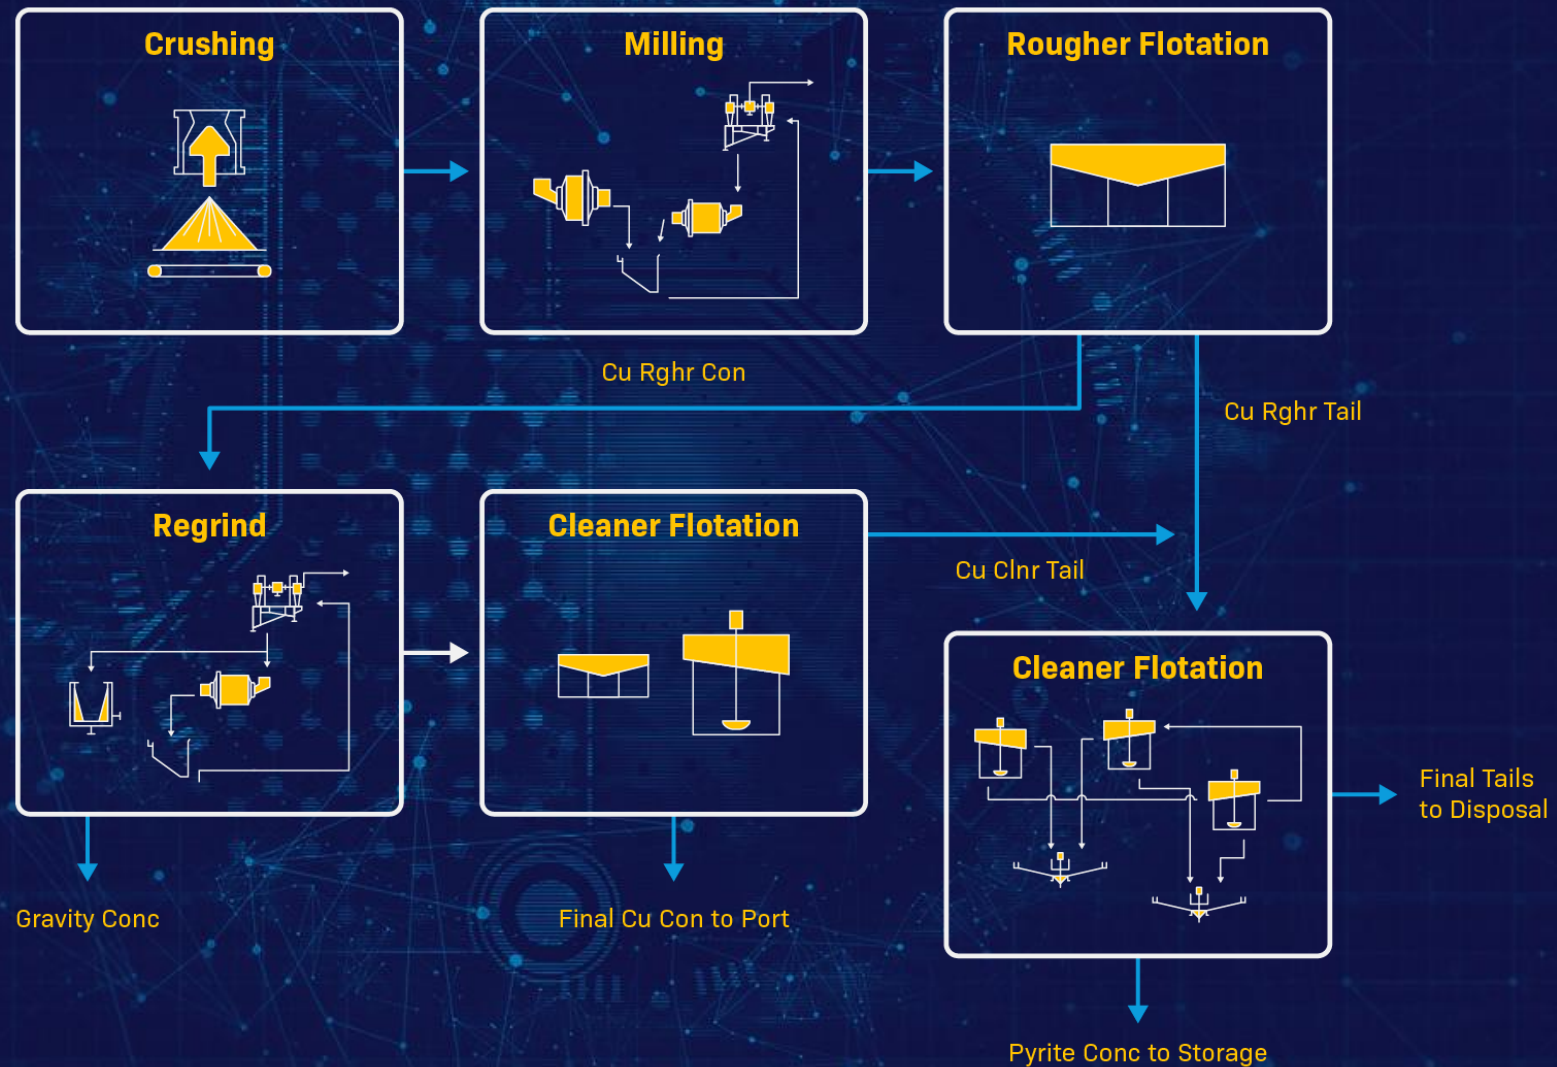

# Mining and Processing Operations

- Ore is mined and processed at an onsite flotation processing plant capable of treating up to **24 million** tonnes per annum (Mtpa).
- The plant currently recovers copper, gold and silver into a saleable concentrate.
- Final concentrate is transferred to a silo and storage vessel before being exported (using commercial shipping) to customers in Japan, the Philippines, Germany, South Korea and India where it is refined to produce copper metal and gold and silver bullion.

# Process Flow

# 2. Low Recovery

## The Challenge

# Problems at Ok Tedi

Low gold and copper recovery

Insufficient digital maturity for  
business intelligence

Unstable operation,  
reacting and firefighting

Manual operation

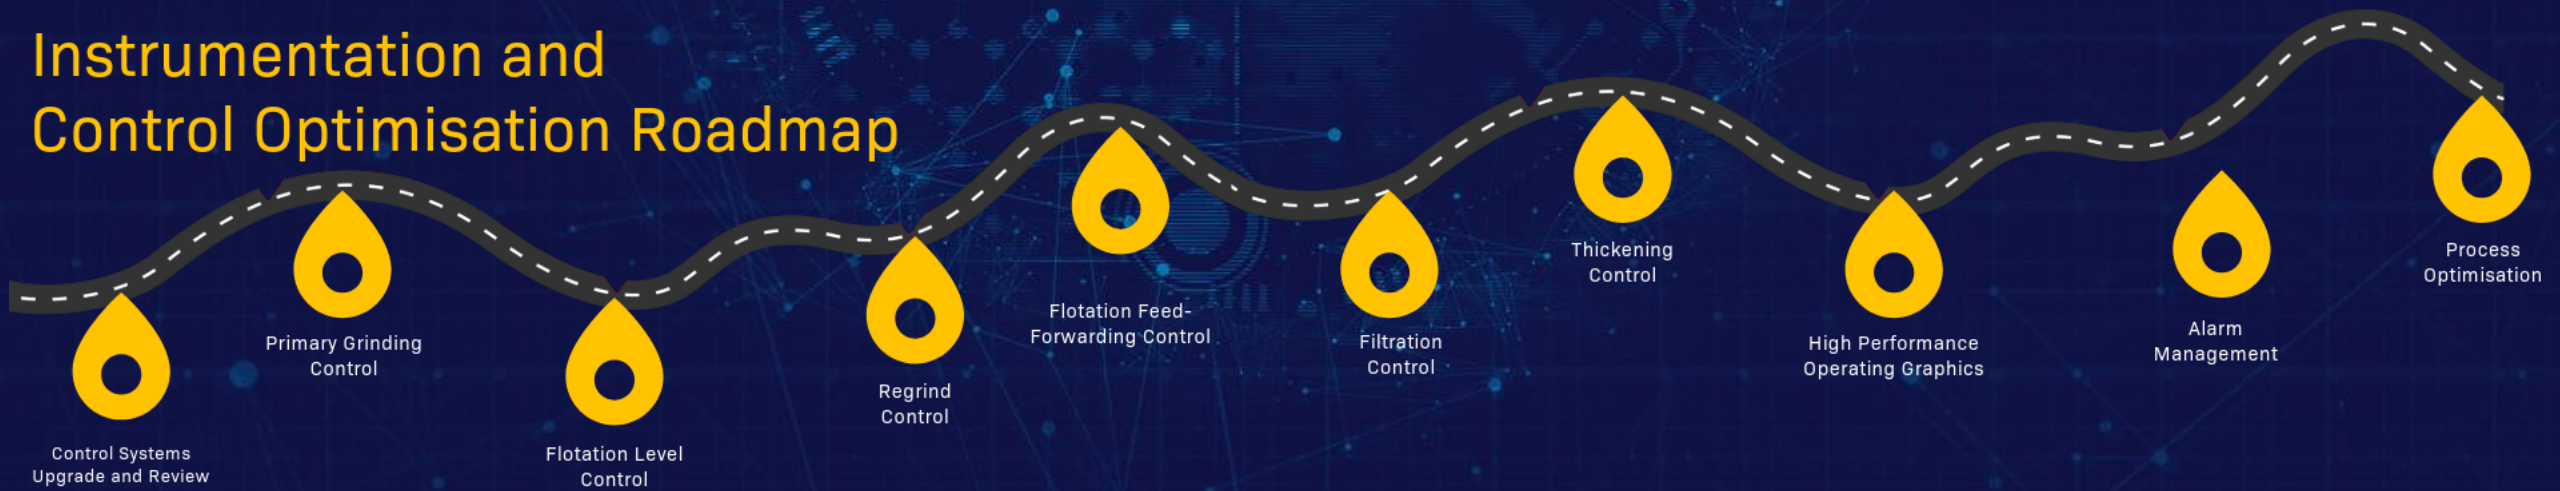

# Solution: Automation Roadmap

# Data and Business Intelligence Roadmap

# Instrumentation and Control Optimisation Roadmap

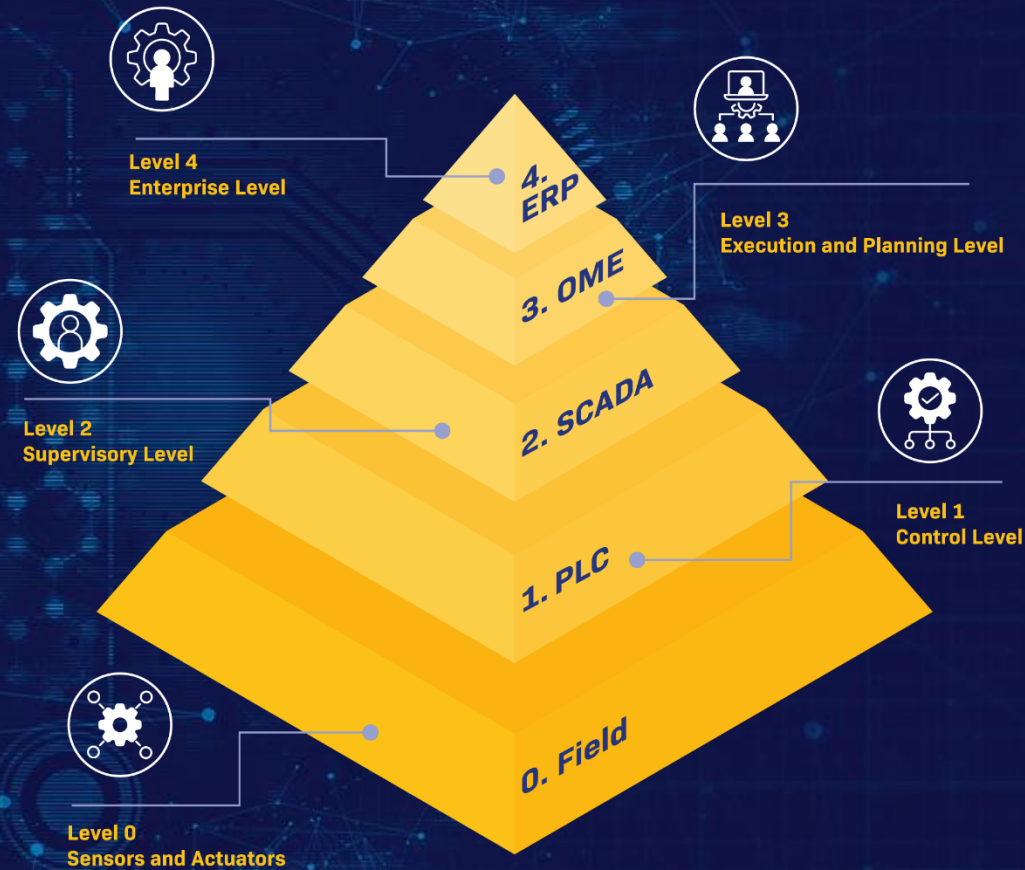

# A stable data platform centering on the AVEVA PI System

## Starting at the bottom and working our way up

- AVEVA Production Management – Crushing and Grinding areas with KPI (Availability and Utilisation)
- AVEVA Plant SCADA – Power generation HMI
- AVEVA PI System – Data historization and calculations
- Mipac MPA – Data visualisation
- Instrumentation upgrades and asset renewal

Problem: Insufficient  
digital maturity for  
business intelligence

Solution:  
Digital infrastructure  
with the  
AVEVA PI System  
as the backbone

# Automation Roadmap – People and Processes

## Bringing people along as part of the automation roadmap

- Training and upskilling of site personnel.
- Improvement of confidence in the data and ways of working for operators.
- Creation of a web-based wiki-style knowledge base so that information can be created, organised and shared with Ok Tedi and their partners.
- Establishment of a Centre of Excellence (CoE) to continue improvements.

The screenshot shows a MIPAC Confluence page titled "Linearisation Process" under the "OTML Automation - MIPAC Site Support" space. The page content includes a section on "Valve Characteristics" explaining that flow through a valve is not linear with valve position and that the installed characteristic is a function of the inherent or ideal characteristic plus the pressure drop across the valve. It features a graph titled "Flow versus Position (Installed and Inherent)" showing three curves: Inherent Characteristic (green), Pressure Drop Ratio = 20 (blue), and Pressure Drop Ratio = 100 (red). The graph illustrates that as the pressure drop ratio increases, the flow becomes more linear with position, and the rangeability decreases (less turn-down). The left sidebar lists various topics under "Troubleshooting articles", including "Linearisation Process".

### Linearisation Process

Created by Martin Randall, last modified on Apr 01, 2020

#### Valve Characteristics

Flow through a valve is not linear with valve position (i.e. position of the valve stem). A valve has an inherent flow characteristic that is a function of the valve "shape". The installed characteristic is a function of the inherent or ideal characteristic (often called the "trim") plus the pressure drop across the valve. The graphs below are typical for an equal-percentage valve.

Valve becomes more linear with increasing pressure drop ratio (up to a point)

Flow versus Position (Installed and Inherent)

Rangeability decreases with increasing pressure drop ratio (less turn-down)

Legend:

- Inherent Characteristic
- Pressure Drop Ratio = 20
- Pressure Drop Ratio = 100

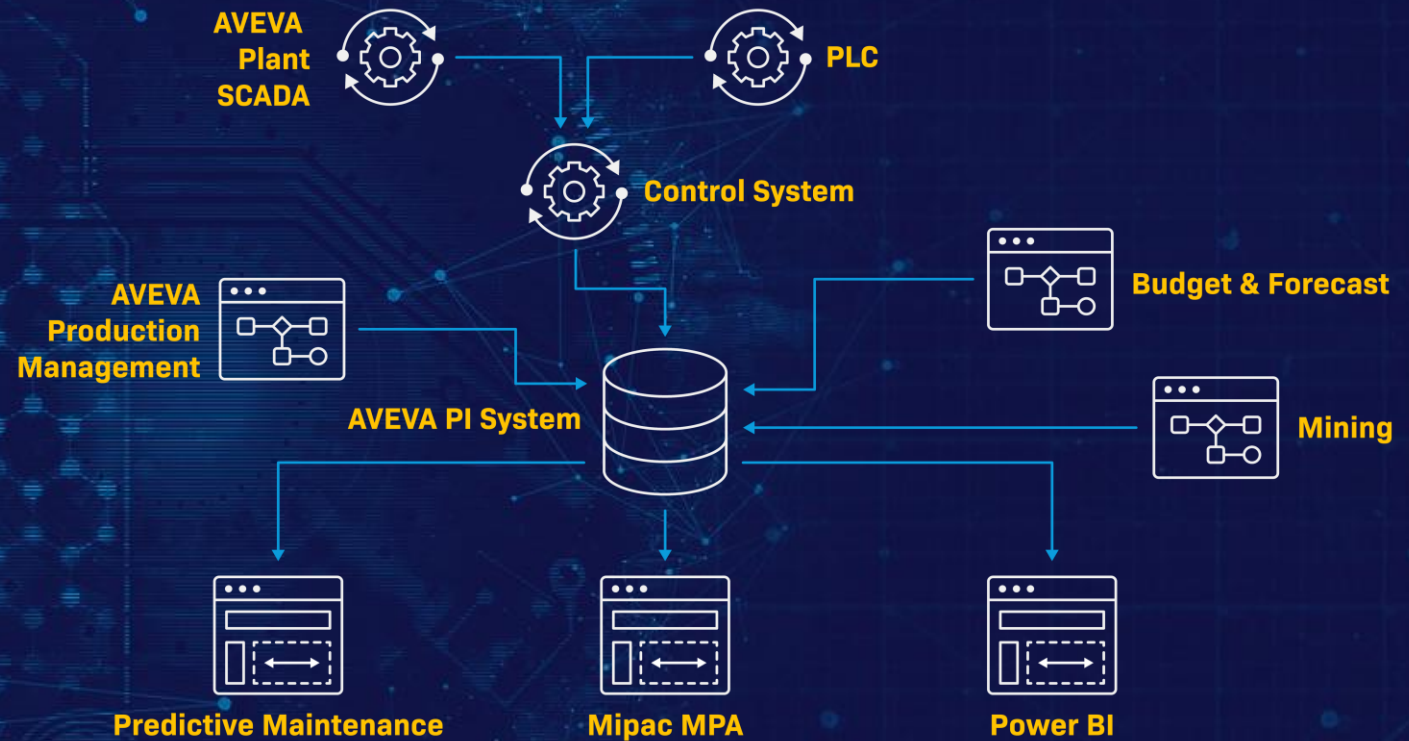

Flow

0 10 20 30 40 50 60 70 80 90 100

# Automation Roadmap – Infrastructure

## Updated and Upgraded Infrastructure

- Buffering configured for all interfaces and connectors to data sources.
- Updated the PI system software and OS.
- Data was already consolidated on the SCADA side, PI interfaces consolidated to point only to the main SCADA system.
- Updated security to use PI identities.
- Creation of documentation.

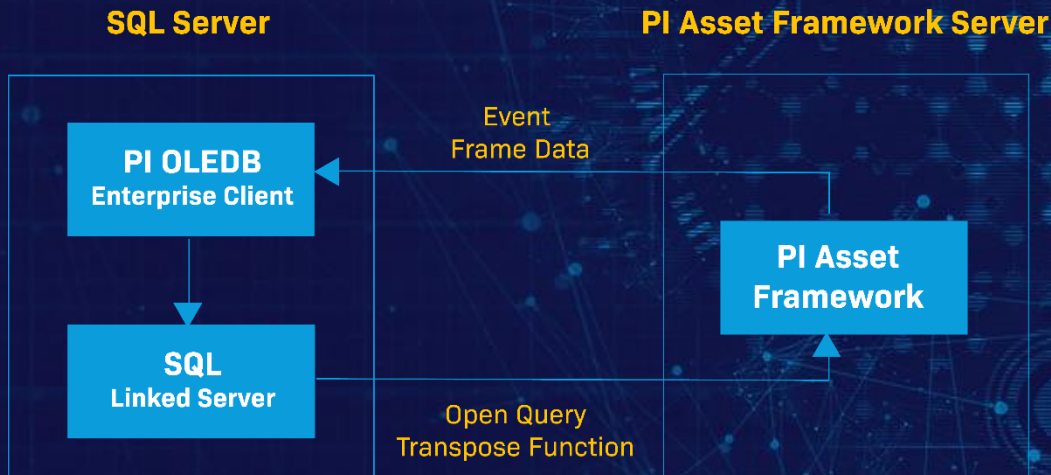

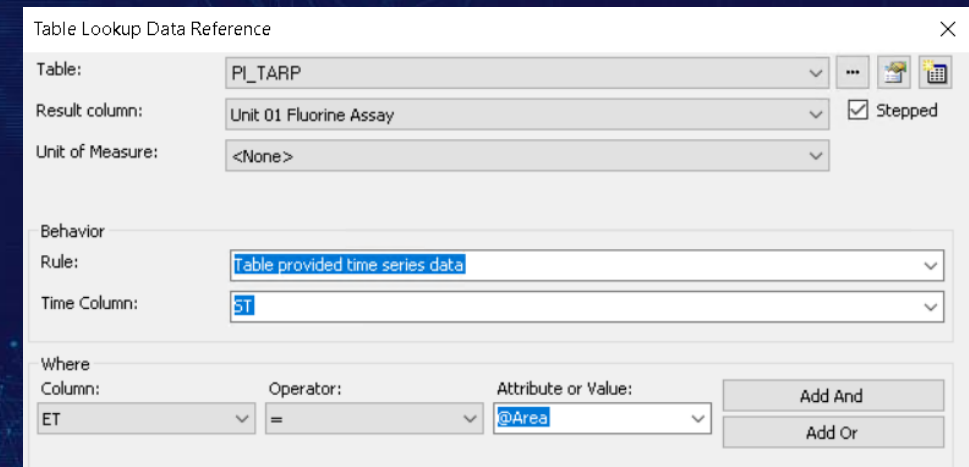

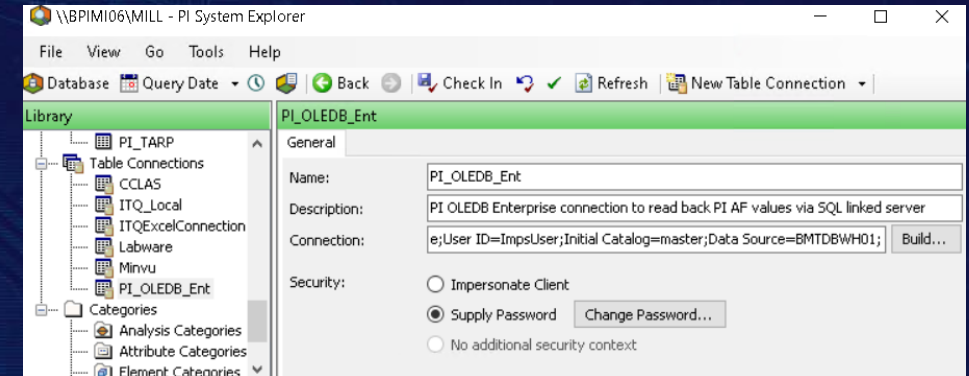

# Automation Roadmap – AF Development and Calculations

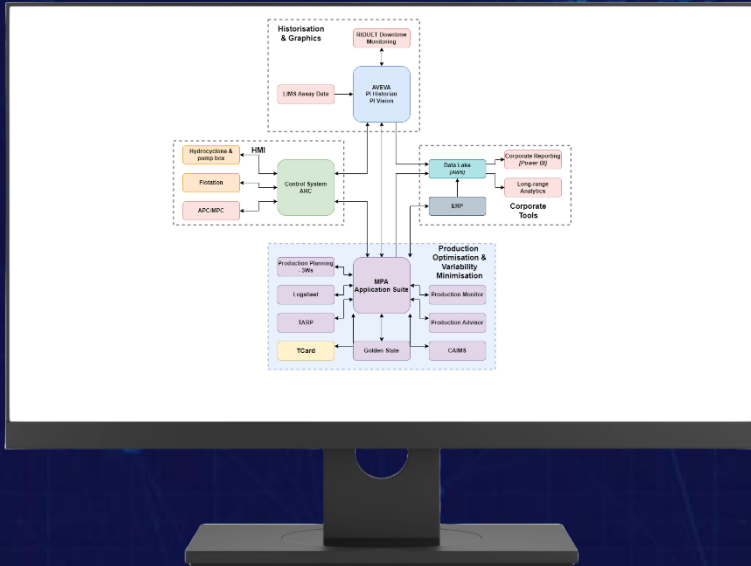

## Combining time series and event data in AVEVA PI

- Reading event frame data using PI OLEDB Enterprise into PI AF linked tables, using the table provided time series data rule in table lookups to view the data as time series.
- Using SQL functions to group data to find event-weighted averages/totals of attributes in event frames for a shift, day etc.

# MPA is Mipac's suite of integrated applications designed to:

- **Visualise** plant processes live
- **Detect** production deviations early
- **Respond** accurately to issues
- **Save** time with reporting

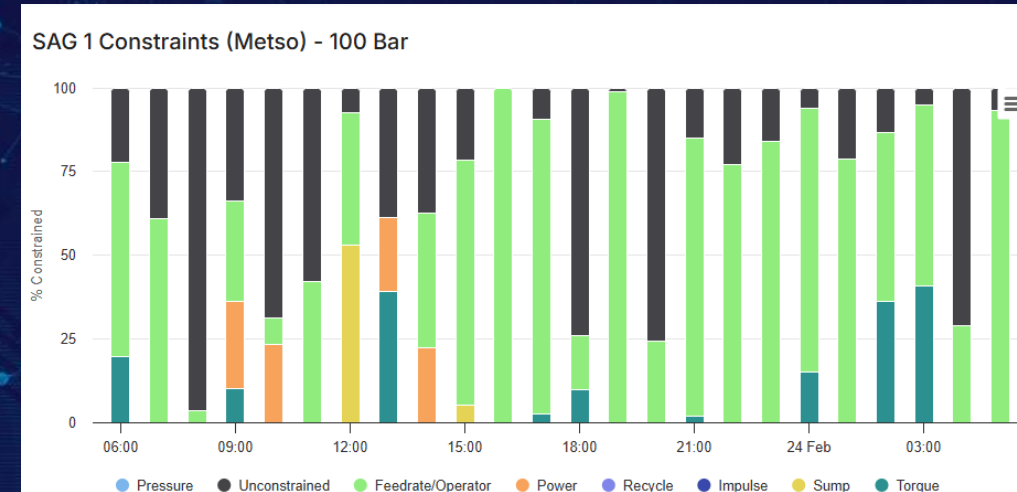

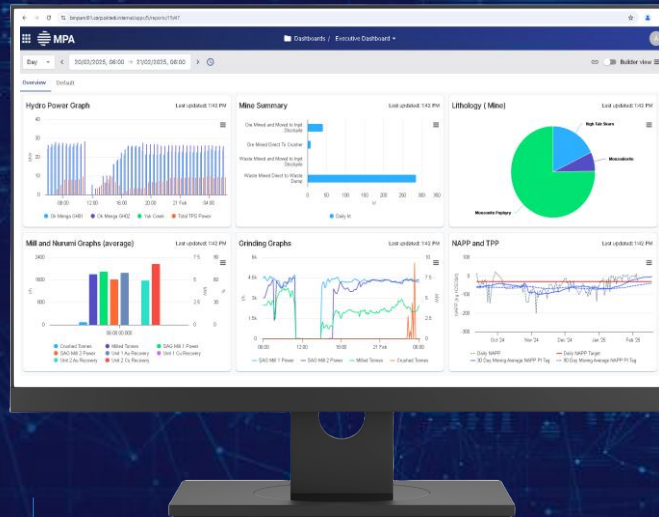

Problem:  
Unstable operations  
of the plant

Solution:  
Short Interval Control and  
other displays and  
dashboards

# Automation Roadmap –Visualisation

High-level operational overview dashboards allowing easy access and interpretation of data

- High-level displays showing values against targets to easily identify deviations and process issues.
- Drill down functionality to quickly diagnose deviations.
- Short interval control (SIC)
- Expert system constraints (SAG Mill)
- Lithology of the feed coming into the plant
- Errors between assays (lab vs in-stream analyser)

# Automation Roadmap –Visualisation

## Trigger Action Response Plan (TARP)

- A plan with a set of actions required when certain abnormal situations occur.
- Triggered automatically from process conditions.
- Flow chart requiring both actions and comments from different parties using event frames.

**TARP actions - in progress (last 30 days)** Last updated: 11:28 AM

What	TARP criticality level	Start Time	Event Frame Duration	Actions
<b>Operations Control Room Operator</b>				
Notify shift supervisor and plant metallurgist	Critical	05/03/2025, 15:02	13 days	
Change out any underperforming cyclones	Critical	05/03/2025, 15:02	13 days	
Adjust circuit SPs as directed by Shift Supervisor and Plant Metallurgist	Critical	05/03/2025, 15:02	13 days	
<b>Operations Flotation Operator</b>				
Manually screen the rougher feed and calculate percent passing 90 µm	Critical	05/03/2025, 15:02	13 days	
Continuously monitor rougher cell amps on DCS or PI	Critical	05/03/2025, 15:02	13 days	
<b>Operations Grinding Operator</b>				
Manually check cyclone feed, Q/F and U/F density	Critical	05/03/2025, 15:02	13 days	
<b>Laboratory Technician</b>				
Take PSI calibration samples and communicate results at discretion of plant metallurgist	Critical	05/03/2025, 15:02	13 days	
<b>Metallurgy Plant Metallurgist</b>				
Review SAG feed size and all mill load and power draw data	Critical	05/03/2025, 15:02	13 days	
Make recommendations to Shift Supervisor	Critical	05/03/2025, 15:02	13 days	

**TARP actions - all (last 30 days)** Last updated: 11:28 AM

TARP criticality level	Start	End	Duration	What	Actions
<b>Operations Control Room Operator</b>					
Critical	13/01/2025, 16:49	21/02/2025, 13:09	a month	Notify shift supervisor and plant metallurgist	
Critical	21/02/2025, 13:41	04/03/2025, 14:07	11 days	Notify shift supervisor and plant metallurgist	
Critical	04/03/2025, 15:15	05/03/2025, 14:45	a day	Notify shift supervisor and plant metallurgist

Critical	04/03/2025, 15:15	05/03/2025, 14:45	a day	Adjust circuit SPs as directed by Shift Supervisor and Plant Metallurgist	
Major	21/02/2025, 13:36	21/02/2025, 13:41	5 minutes	Change out any underperforming cyclones	
Major	04/03/2025, 15:10	04/03/2025, 15:15	5 minutes	Change out any underperforming cyclones	

Problem:  
Manual operation  
of the plant

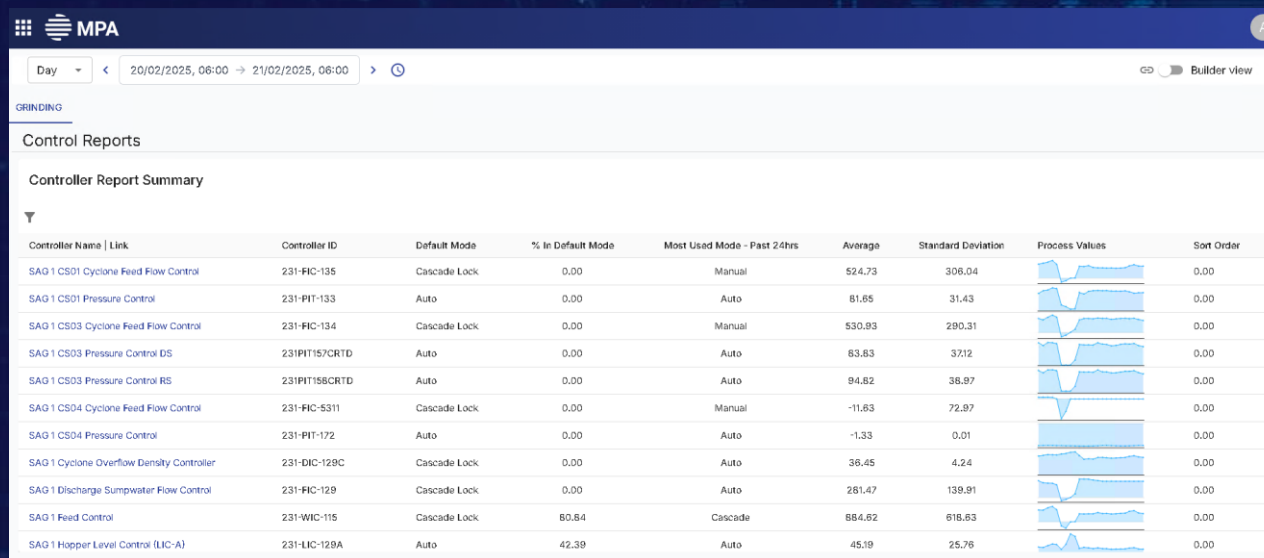

Solution:  
Control Loop Reports  
via MPA identifying  
loops in manual mode

# Automation Roadmap –Visualisation (Controller Reports)

## Improving efficiency by building confidence in the data

- Identifying controls in manual and providing training to the operators
- Identified opportunities in the data and introduced cascade control around water addition and auto control of cyclones utilizing pressure and feed-forward control in cell-level controls.

Problem:  
Equipment  
reliability leading  
to unstable  
operation of the  
plant

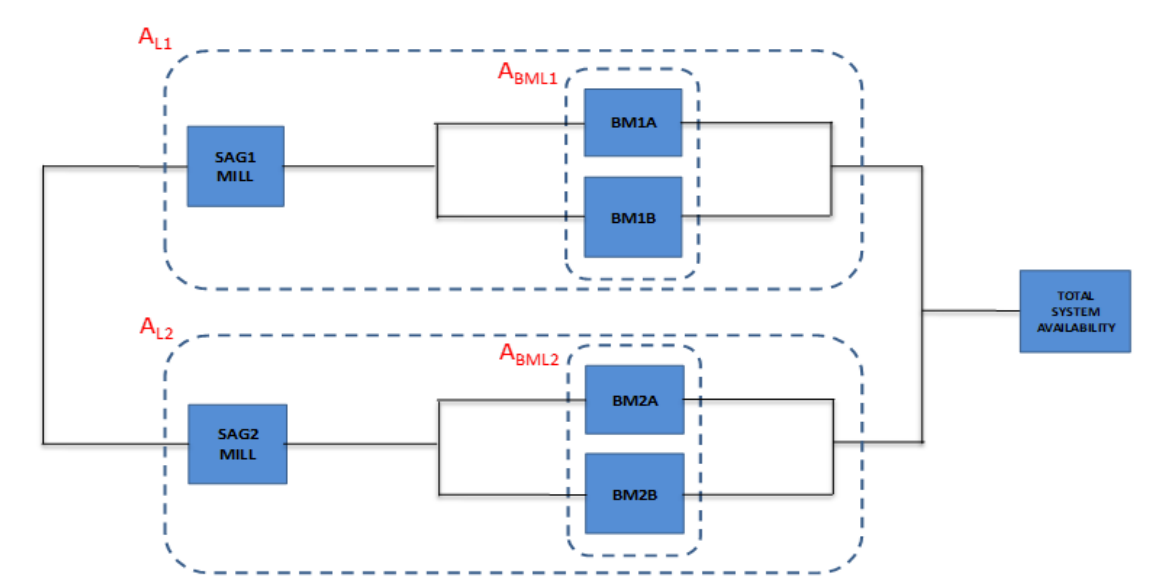

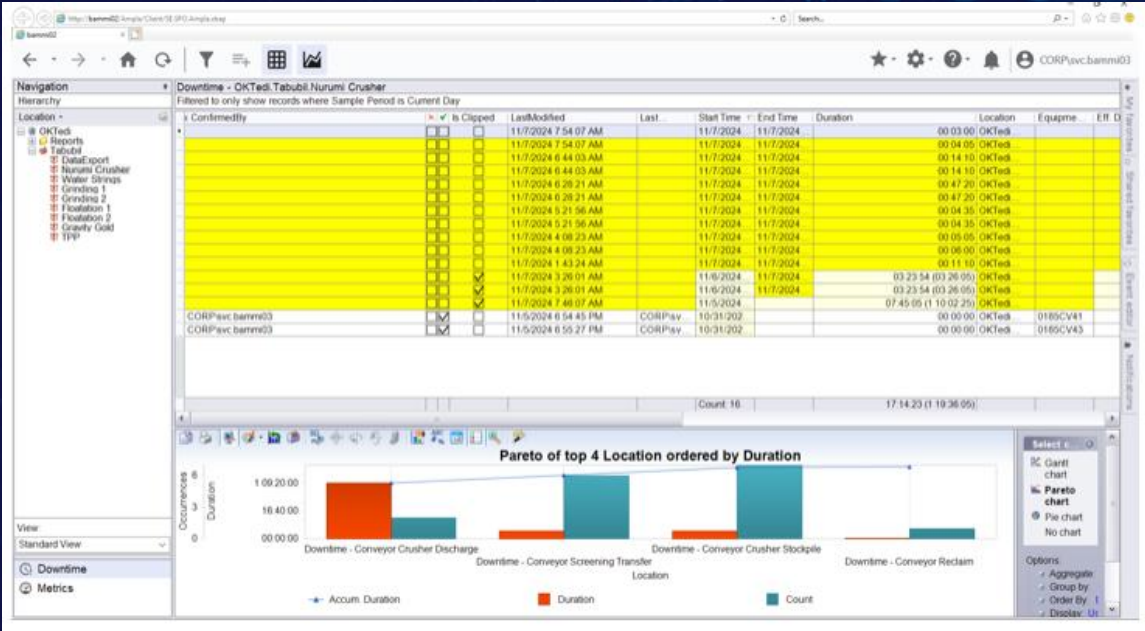

Solution:  
AVEVA Production  
Management and Predictive  
Maintenance

# Automation Roadmap – Reliability (Production Management)

Capturing and classifying plant and equipment downtime data for insights into improvements

- Data from Production Management is used as inputs for further analysis such as predictive maintenance.

## Downtime Records - Automated Report

# Automation Roadmap – Reliability (Production Management)

Data from AVEVA Production Management is used to produce reliability KPIs

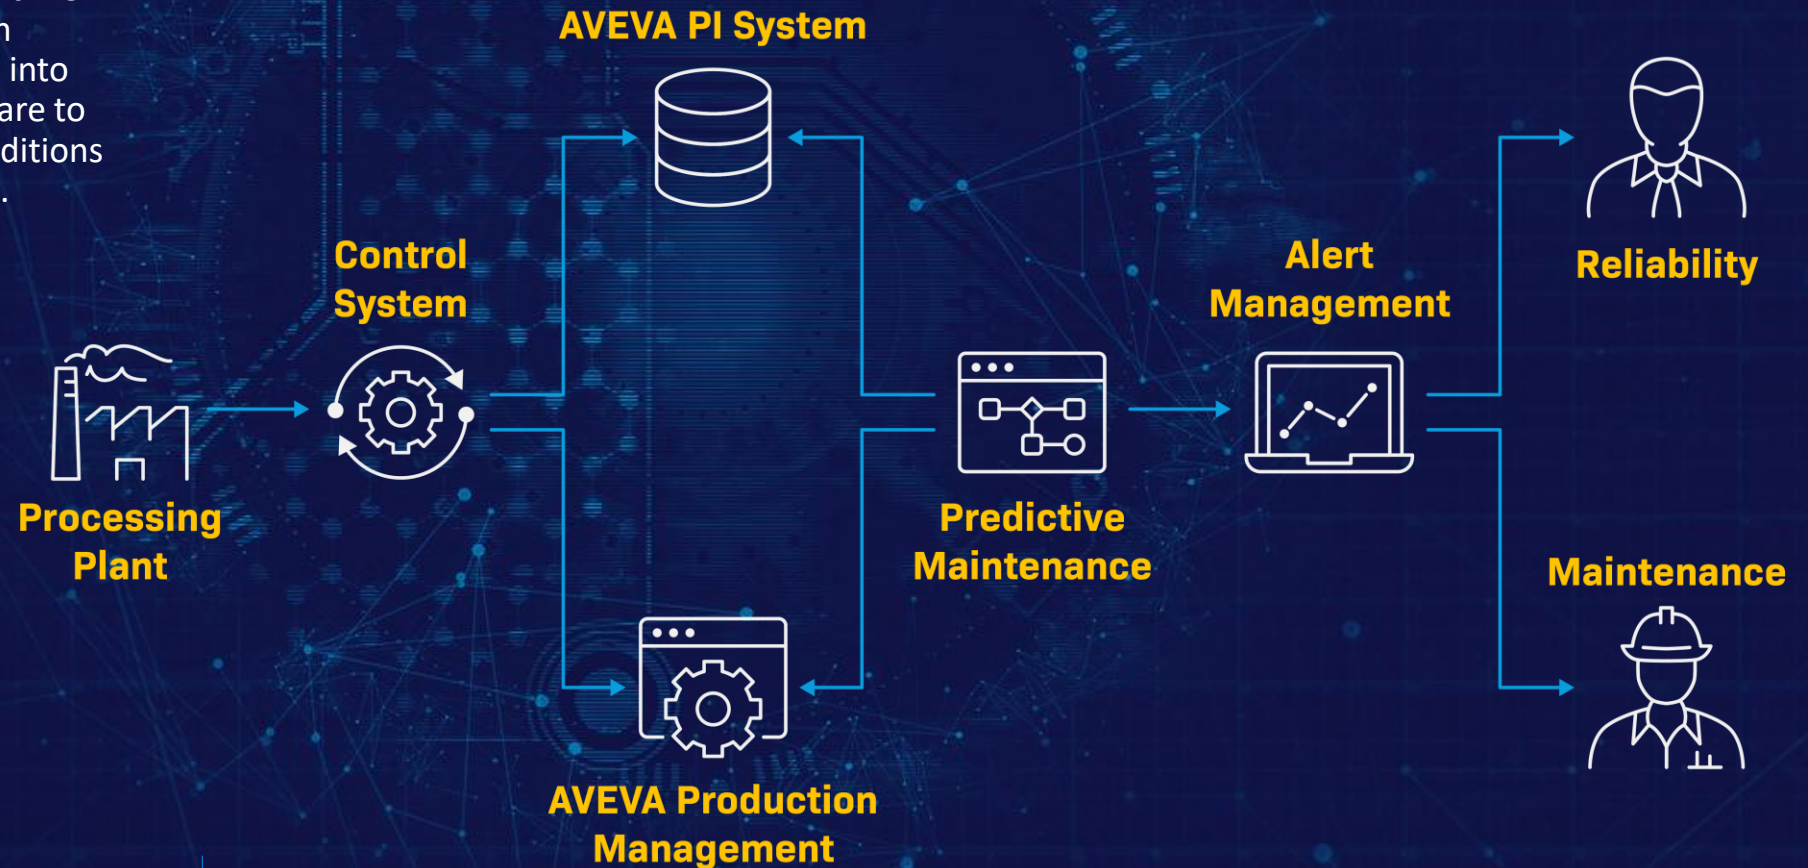

# Automation Roadmap – Next steps and the Future

## Predictive Maintenance using PI data

- Combining live and historical time-series data from AVEVA PI with downtime events from AVEVA Production Management and feeding this into predictive maintenance software to create alerts on abnormal conditions detected on major equipment.

# Summary

# Ok Tedi Mining improves Recovery

## Challenge

- Low gold & copper recovery
- Insufficient digital maturity for business intelligence
- Unstable operation, reacting and fire-fighting
- Manual operation

## Solution

- Deployed AVEVA PI System to streamline data collection, access, analysis and reporting
- Deployed AVEVA Production Management to capture downtime and produce KPI
- Deployed Mipac's MPA software to visualise AVEVA PI data and gain process insights

## Results

- Improved **Au recovery** from 55% to 70%
- Improved **Cu recovery** from 83% to 89%

# Outcomes

Contribution to increased recovery:

Au 55% to 70%

Cu 83% to 89%

Enhanced digital maturity

Stable, automated operation and time for improvements

#### ABOUT AVEVA

AVEVA is a global leader in industrial software, sparking ingenuity to drive responsible use of the world's resources. The company's secure industrial cloud platform and applications enable businesses to harness the power of their information and improve collaboration with customers, suppliers and partners.

Over 20,000 enterprises in over 100 countries rely on AVEVA to help them deliver life's essentials: safe and reliable energy, food, medicines, infrastructure and more. By connecting people with trusted information and AI-enriched insights, AVEVA enables teams to engineer efficiently and optimize operations, driving growth and sustainability.

Named as one of the world's most innovative companies, AVEVA supports customers with open solutions and the expertise of more than 6,400 employees, 5,000 partners and 5,700 certified developers. With operations around the globe, we are headquartered in Cambridge, UK and listed on the London Stock Exchange's FTSE 100.
