

IFSL Equilibrium Cautious Portfolio

Each month we provide factsheets for the IFSL Equilibrium funds which give details of the holdings as at the end of the month, together with market commentary.

In addition to this, each quarter we provide more detailed analysis of the holdings, focusing on what has been performing well and what has been underperforming.

Contribution to return by sector

The table below shows each of our asset classes and the equity regions we invest in. It breaks down the average exposure, the return for the asset class over the period we have been invested and the contribution to the overall portfolio return over three months and 12 months.

| Asset | 3 months | | | 12 months | | |
|--------------------------|------------------|----------------------|--------------------------|------------------|----------------------|--------------------------|
| | Average weight % | Asset class return % | Contribution to return % | Average weight % | Asset class return % | Contribution to return % |

Portfolio commentary

The past quarter has seen a further pullback in various asset classes.

The current high level of inflation has proven more persistent than many had thought. As a result, central banks are putting up interest rates more quickly and more steeply than markets had expected.

The assets most sensitive to interest rates have been hit the hardest. This means that fixed interest – normally seen as a relatively low-risk asset class - has performed particularly poorly, in many cases worse than equity markets.

Also hit hard have been assets like real estate, where the increased cost of borrowing looks set to hit property prices, in commercial as well as residential.

Even infrastructure, previously one of the best-performing areas in portfolios, has been hit by increased borrowing costs. Here in the UK, it has also been affected by proposed changes to cap the price at which renewable energy providers can sell their electricity.

After the government's mini-budget there has been an additional hit to most UK-based asset classes. This has been well covered elsewhere, but the upshot was an even bigger increase in borrowing costs in the UK compared to elsewhere, a fall in the pound, and concerns that the UK will fall into recession.

This has led to UK equities losing more than many other parts of the world, and UK bonds underperforming their developed market counterparts. Overseas assets have also had a boost

for sterling-based investors, with most currencies gaining against the pound.

The table below shows the returns of some selected asset classes over the past three months both in nominal and currency adjusted terms:

| Asset class | Return (local currency) | Return in sterling |
|-------------------------------|-------------------------|--------------------|
| FTSE 100 (UK large companies) | -2.72 | -2.72 |
| S&P 500 (US equities) | -5.00 | 3.35 |
| FTSE 250 (UK mid caps) | -7.30 | -7.30 |
| MSCI Emerging Markets | -8.18 | -3.80 |
| UT Sterling Corporate Bonds | -9.40 | -9.40 |
| FTSE Gilts All Stocks Index | -12.85 | -12.85 |

Whilst many asset classes have fallen in value, this has left a number of them looking relatively cheap relative to history. Whilst we expect further volatility in the short term, driven by government and central bank actions, we are very optimistic about future returns with yields on various assets now being much higher than they have been for some time.

Cautious commentary

The portfolio was down 4.1% over the past three months.

On the plus side, alternatives made a positive contribution to returns, as did cash where our holding in US dollars gained strongly due to the fall in the pound.

However, the other asset classes all lost money. The biggest detractor was real assets, with real estate and to a lesser extent infrastructure both being hit hard.

Fixed interest was the second biggest detractor from returns. This is despite our fixed-interest funds falling significantly less than a typical corporate bond fund or gilts.

Equities also detracted from returns overall, although this was almost entirely down to UK equity holdings. Our overseas equities actually added to returns over this period despite falling markets, helped by the fall in the pound relative to other currencies.

At a fund level, the biggest contributor was the THEAM Dynamic Volatility Carry fund – this is an alternative fund designed to produce positive returns when equity markets are volatile.

Other positive performers include the Baillie Gifford American fund and the Royal London Global Equity Select fund, both of which benefited from the strong dollar relative to the pound.

The biggest fund detractors included two UK equity funds, our UK gilt ETF, as well as the Tritax and Segro real estate investment trusts and the Clearbridge Global Infrastructure fund.

Whilst it has performed poorly over recent times, Clearbridge is actually the biggest positive contributor to fund performance over 12 months.
