

Compact Laser Displacement Sensor CD22 Series

By: **OPTEX**
FA OPTEX FA CO., LTD.

CD22 SERIES

Smallest in class*

W18 × D31 × H44 mm

18 × 31 × 44 mm (W × D × H). The FASTUS CD22 series has achieved being the smallest displacement sensor in its class by adopting a new type of hybrid lens for the optical system and by integrating accumulated optical technology. By utilizing Optex FA's know-how regarding the completion of measurement processing inside the sensor head, a feedback circuit that is the same as those on high-end displacement sensors has been equipped within the compact body.

*Among devices equipped with displays in the 1 μm repeat accuracy class. Optex FA examination performed November 2015.

- Newly added amplifier unit that can be connected with CC-Link communication units
- Built-in amplifier & digital 4-digit digital display
- Featuring high performance functionality like high-end models

- For the pig tail type, please purchase an optional connector cable.
- When using a CDA amplifier unit, please select the RS-485 communication type.

Regarding stainless steel housing type (made-to-order)

A type that features SUS316L for the housing can also be made.

Displacement sensor amplifier unit CDA series

CDA-M (64PMI294)
(master unit)
CDA-S (64PMI331)
(slave unit)

Features an organic EL display that can display clearly in both Japanese and English. This external amplifier can be used for calculations using two CD22 series units or connected to a CC-Link communication unit.

Features

Ideal for robot mounting

CD22 series models feature a compact and lightweight body, and because of their built-in amplifier, there are few limitations on installation space and wiring, meaning that sensors themselves can be mounted on robots or on moving parts.

The housing features aluminum die-casting that suppresses measurement errors caused by temperatures or housing distortion.

Easy-to-see digital panel

Features an ultra-small body and easy-to-see built-in 4-digit digital panel meter. Confirmation of distance can be performed on the spot and the 4 operation buttons provide multi-functionality while enabling easy operation.

The external amplifier unit enables remote operation and easy calculation setting

With its excellent visibility and operability, the external amplifier unit enables the CD22 series to be operated remotely even when mounted in narrow spaces such as inside machinery. Calculation of thickness and height differences can be performed easily using two sensor heads.

Displacement sensor amplifier unit

CDA series

Connect with CC-Link to achieve "sensor visibility"

By connecting a CDA series to a communication unit, connection to a CC-Link network is possible.

It supports Mitsubishi iQ Sensor Solution (iQSS) and batch management of sensors can be performed easily with GX Works2.

High-accuracy

With the CD22 series, the cause of all measurement errors, even with hard-to-measure workpieces, are eliminated using "Tri_CORE" optimization. This technology corrects receiving light waveforms by way of "digital sub-pixel processing," a "high resolution electric shutter," and unique algorithm" with highly accurate results.

Repeat accuracy: 1 μm (CD22-15□)

Linearity: $\pm 0.1\%$ F.S.

Linearity characteristics data **Low deviation depending on the workpiece**

— White ceramic (specification) — Stainless steel plate — Black rubber

Automatic sampling function

With the CD22 series, in addition to normal receiving light quantity feedback, a "Sampling period: AUTO" mode has also been equipped that automatically adjusts the sampling period when there are only low levels of reflected light from the workpiece.

Thanks to this, high-speed measurements of even black workpieces and metal workpieces with low levels of reflected light are possible.

Alarm hold function

Alarms may be generated during measurement due to small holes in the workpiece, etc. CD22 series models are equipped with an "alarm hold function" that enables the time until an alarm is identified to be set. It is possible to configure settings so that an alarm is not generated in the case of small holes, but is generated when there is no workpiece.

Whatever your challenges are, Mitutoyo supports you from start to finish.

Mitutoyo is not only a manufacturer of top quality measuring products but one that also offers qualified support for the lifetime of the equipment, backed up by comprehensive services that ensure your staff can make the very best use of the investment.

Apart from the basics of calibration and repair, Mitutoyo offers product and metrology training, as well as IT support for the sophisticated software used in modern measuring technology. We can also design, build, test and deliver measuring solutions and even, if deemed cost-effective, take your critical measurement challenges in-house on a sub-contract basis.
