QUICKTIP

StarLink Edge LE Adapter

The StarLink Edge LE Adapter allows for a simple connection to non-LE Audio enabled phones, tablets, and computers that have a USB-C port, to Starkey's LE Audio hearing aids, for hands-free high-quality streaming and sound.

The LE Adapter is intended for Android phones, tablets, and PCs, *not for Apple devices*.

Pairing

1. Connect the LE Adapter to the USB-C port on the host device (phone, tablet, PC).
2. The LED indicator on the LE Adapter will blink blue for pairing mode.
   Note: Pairing to your hearing aids is only required the first time you use your LE Adapter. Connection is immediate when plugged into a host device after initial pairing.
3. Power cycle the hearing aids to pair with the LE Adapter:
   - For rechargeable hearing aids, place in the charger for a few seconds and remove from charger.
   - For non-rechargeable hearing aids, open and close the battery door.
4. The hearing aid LEDs will blink green for five seconds when pairing is successful. When pairing a set of hearing aids, one hearing aid at a time will indicate successful pairing - one blinks green for several seconds and then the second device will blink green.
5. The LED on the LE Adapter turns solid blue for 5 seconds to indicate a successful pairing.
6. After pairing the LE Adapter to the hearing aids, the LE Adapter can stream from any number of devices with a USB-C port.

If the device does not have a USB-C port, a USB adapter such as USB-C to USB-A can be used, however not every third party adapter is guaranteed to work.

Use

When the LE Adapter and hearing aids are paired with the host device, audio can be streamed and hands-free calls can be made through the adapter.

1. Plug the LE Adapter into the host device, (phone, tablet, PC) and begin a stream.
2. Use the host device to accept/end calls.
3. If connection is lost, remove and re-insert the adapter to the host device.
4. The LE Adapter is capable of 2-way calling. This means that you do not have to speak into your phone during a call or PC during a web meeting. Your hearing aid microphones will send your voice back to the host device through the LE Adapter.

It is not recommended to use the LE Adapter with devices that have a 3.5 mm audio jack since audio typically routes though the 3.5mm audio jack and not the USB-C.

Resetting

A reset is necessary to pair the LE Adapter to a new pair of hearing aids. It is also useful to troubleshoot a poor connection to the LE Adapter.

1. The StarLink Edge LE Adapter needs to be plugged into a phone, tablet, or PC that is powered on to reset.
2. Use a pointed tool such as a paperclip or pin to press the reset pin hole until the LED starts to blink blue.
3. Once the LED blinks blue, the adapter is ready to pair with a new device.

Charging

1. The LE Adapter does not have an onboard battery and needs to be plugged into the host device (phone, tablet, PC) to stream audio.
2. The phone or tablet can be charged while the LE Adapter is plugged in to the device. Connect the charging cable via the USB-C charging port on the adapter.
3. Fast charging or data transfer is not supported when the charging cable is plugged in via the adapter.
