

Table Microphone

Engage, connect, converse.

How it helps

Starkey's second-generation StarLink Edge Table Microphone is powered by next generation Bluetooth® LE Audio, bringing high-fidelity audio to patients seeking to improve speech understanding. A patient favorite, the Table Microphone helps in a variety of situations: one-on-one, group, or distance listening for easier listening in any environment. It also features automatic recovery when streaming is interrupted, for a seamless listening experience.

How it works

The StarLink Edge Table Microphone utilizes an eight-microphone array design to pinpoint speech around the user. The Table Microphone can be used in an automatic, manual, surround, or single person remote microphone method to assist patients wherever they need it.

- **Automatic mode** intelligently follows the main speaker in a group environment using beamforming technology making it excellent for dynamic group settings.
- **Manual mode** may be used in a fixed group setting where the listener may only want to hear certain speakers in a group environment. The user can press and hold the microphone closest to the person they wish to hear; this can be done as many times as the user wishes.
- **Surround mode** utilizes all eight microphones at the same time. This may be useful in a quiet group setting.

The Table Microphone is equipped with an accelerometer to detect when it is in a vertical position and will only use the uppermost microphone so that it may be handed to a single speaker to wear around their neck with the provided lanyard for one-on-one scenarios.

Tell your patients

“The StarLink Edge Table Microphone is a great solution in group situations where it may be hard to follow the conversation. It is also helpful to hear a speaker at a distance or in a reverberant room, like an auditorium.”
