

GENESIS^{AI}

Give yourself an extra edge with **Edge Mode+**

All hearing aids are **NOT** created equal

Traditional Hearing Aids

Traditional hearing aids amplify sounds, making them easier to hear and locate, but can't always distinguish between sounds you want to hear and sounds you don't.

Genesis AI Hearing Aids

Genesis AI detects the differences between millions of sounds, and is able to prioritize and amplify signals of interest (like speech) while suppressing background and other noises.

Genesis AI Hearing Aids with **Edge Mode+**

On-demand Edge Mode+ uses artificial intelligence to "remove the blur" from challenging listening environments and brings speech and other signals of interest into hyper auditory focus.
