

# Axon Updates March 2026

---

## Release schedule

The Axon **March 2026** release is scheduled by region on the listed dates. These dates indicate when updates are deployed, not when features become available.

Feature availability varies by product and region and is subject to change. For timing and availability details, refer to each feature's release note. For Records and Standards, see the [Productivity page](#) for release dates.

## Regional deployment dates

### March 23, 2026

- Enterprise region (.ent.evidence.com)
- Canada (.ca.evidence.com)
- The Netherlands (edca.eur.evidence.com)
- New European region (.eur.evidence.com)
- European legacy region (.eu.evidence.com)

### March 24, 2026

- U.S. Federal (.evidence.com)
- U.S. Law Enforcement (.evidence.com)
- U.S. Enterprise AWS region (.ent2.evidence.com)
- Germany (.de.evidence.com)

### March 31, 2026

- Australia (.au.evidence.com)
- United Kingdom (edca-azure.uk.evidence.com)
- South America (.la.evidence.com)

We do not expect any downtime during these updates.

Learn more about the [Axon Cloud Services Maintenance Schedule](#).

Additional help documentation for the products included in these release notes is located at [axon.com/help](https://axon.com/help).

# Digital evidence management

---

## Core platform updates

---

### Your preferred MFA method is now easier to find at sign-in

Your most recently used multifactor authentication (MFA) method now appears directly in the main list of sign-in options, labeled "Last used," so you can select it without hunting through additional menus. This applies to email, SMS, and voice call methods — the Axon body-worn camera option is always listed first when enabled by your organization.

**Availability:** Available for all organizations by March 31, 2026.

Improvement | Federal

### New “delete case” permission

A new, separate permission is being added for the ability to delete a case. Previously, users with the “Edit case” permission could delete cases, which can result in unwanted deletion. Admins can now control which roles can delete cases, while still giving other users the ability to edit cases.

**Availability:** Available in all regions by March 31, 2026.

Admin | Improvement | Federal

### Export role permissions as CSV or PDF

You can now export a full list of permissions for any role as a CSV spreadsheet or a formatted PDF document, making it easier to review, share, and audit role configurations.

**Availability:** Available in all regions by March 31, 2026.

Admin | Improvement | Federal

### Admin Evidence playback settings changes

In the Evidence playback settings, on the Overlay tab, the Dynamic setting for Recorded on, which causes the "Recorded on" time in a video overlay to advance along with the video, will only apply to video from third-party (non-Axon) sources. Video from Axon devices shows the time in the video, so the "Recorded on" time in the overlay will only show the start time of the recording. Your existing setting won't change. The Watermark

tab sets where the "Viewed by" watermark appears in video and image evidence, with 5 position options. Note that the date shown in "Viewed by" is in the Coordinated Universal Time (UTC) zone, and that can't be changed.

[Evidence playback settings](#)

[Admin](#) | [Improvement](#) | [Federal](#)

## User and group import pages redesigned for clarity and safety

The User Import and Group Import pages are updated to make bulk imports clearer and safer. The pages now show how Axon Evidence uses External ID to decide whether to create or update a record, a loading indicator appears while an import is processed, and External ID is now optional for new records — Axon generates one automatically if left blank. Synchronize options now require an explicit confirmation step to prevent accidental data changes.

**Availability:** Available in all regions by March 31, 2026.

[Admin](#) | [Improvement](#) | [Federal](#)

## Admins can now define redaction reasons for audio masks

Redaction reasons are now supported for audio masks. Admins can create reasons in Redaction Settings, and users can select them when adding audio masks in Redaction Studio — bringing audio masks in line with how redaction reasons already work for video.

**Availability:** Available to Redaction Assistant customers.

[Admin](#) | [Improvement](#) | [Federal](#)

## View evidence video and images permission

A new View evidence video and images permission is being added to the Evidence Management permission section. This permission controls whether users can view the underlying media for evidence items (view videos, see images, hear audio, etc.) This permission will be automatically assigned to all roles that currently have the View Unrestricted Evidence, View Restricted Evidence, and View Confidential Evidence permissions, so users will not lose existing access to media following this release. For newly created roles, this privilege will default to Prohibited.

If you want any roles to be able to access evidence transcripts and metadata (for example, so they can use Draft One), but NOT view the underlying media, you can prohibit this permission.

See [Draft One administration - Assign permissions](#) for more information.

**Availability:** This update will roll out to all regions in March.

**Admin** | **New** | **AI Era Plan** | **Federal**

## Resolved issues

These fixes will be deployed to all customers by March 31.

- **Admin:** When adding more users with "Add Another," the role field now clears properly between submissions. Previously, the field appeared to retain the previous role selection, but submitting the form returned an error requiring you to clear and re-select the role manually. The role field now resets to empty as expected, and you can select any role without encountering errors.
- **Admin:** The actions menu on the User Detail page now shows all actions you have permission to do. Previously, the menu was hidden entirely if you didn't have User Administration access, even if you had other relevant permissions such as Generate User Audit Trail Report. It does only show the actions you have permissions to do.

## Partner API updates

---

The Axon Evidence Partner API Guide has been updated with the changes to the Partner API. You can view the API Guide at <https://developers.axon.com>. If you are unable to access the API Guide site, see [Accessing the Axon Developer Community](#).

The following changes are part of the Axon Partner API for March:

- A webhook for ALPR hits is now available. The webhook will send notification when a hit is registered in Axon Evidence. Information on the webhook is now on <https://developers.axon.com>.
- The [Retrieve Audit Events by Event Type](#) endpoint request announced in December for some regions will be available to all regions by March 31, 2026.

## AI-powered features

---

Features including the AI Era Plan tag (**AI Era plan**) use artificial intelligence to provide insights, recommendations, or analysis based on available data and user inputs. These outputs may include inaccuracies, limitations, or outdated information. These tools are designed to support—not replace—professional judgment, legal interpretation, and human oversight. Users are responsible for carefully reviewing and verifying AI-powered content before acting on it. Axon continually works to enhance AI accuracy, mitigate bias, and uphold ethical standards. Learn more at [Axon AI](#).

Looking for what's next? See the [Coming Soon](#) section for AI-powered features planned for future releases.

# Axon Evidence

---

## Share a filtered evidence search with a secure link

You can now share a filtered evidence search in the redesigned Axon Evidence by copying a pre-generated URL from the Saved search menu. Select Share current search to copy a link to your clipboard. When someone opens the link, they land on the Evidence search page with the same filters applied. (Evidence access permissions still apply).

Learn more at [Find evidence](#).

**Availability:** All regions

Improvement | UI/Accessibility | Federal

## Evidence and case table multi-select with Shift + Click

You can now use Shift + Click in the evidence and case tables to select multiple rows at once, reducing the need to manually select individual checkboxes and making bulk actions more efficient. Learn more about [searching for evidence](#).

**Availability:** All regions

Improvement | Federal

## Document text search

Document Text Search is now in the redesigned Axon Evidence for Pro users, making typed text in newly uploaded PDF (.pdf) and Word (.docx) documents searchable while respecting existing evidence access permissions. Existing documents are not automatically indexed; you may request a one-time backfill priced based on document volume by contacting your Axon representative. Document Text Search is enabled by default and can be turned off by admins using the **Search Across Document Text** permission.

Learn more at [Search document text](#).

**Availability:** All regions

New | Federal

## Saved searches integrated into the search bar in the redesigned Axon Evidence

Saved searches have moved into the search bar and are now accessed through a dropdown. This change makes it easier to find and switch between saved searches while searching for evidence. Learn more about saved searches.

**Availability:** All regions

Improvement | UI/Accessibility | Federal

## Resolved issues

The following issues are resolved in the redesigned Axon Evidence search page:

- User filter now re-combined back into a single dropdown containing Owner (selected by default), Uploaded by (selected by default), and Access list, so results will match the same as a User filter in the legacy experience.
- Date filter now re-combined back into a single dropdown containing Recorded on (selected by default), Uploaded on (selected by default) and Deleted on, so results will match the same as a date filter in the legacy experience.
- Deleted evidence can now be selected for export.
- Request access button added in Gallery view when users have List but not View evidence access permissions.
- Category filter label updated from “None” to “None / Uncategorized” for uncategorized evidence.
- After entering a query in the search bar, users can now quickly narrow down to a single field by clicking the “Matched on” column dropdown then selecting “Only” on hover.

## Axon Performance

---

### Video Review Goals: Improved “Per Officer” Tracking

We’ve fixed the queueing logic and clarified how Video Review Goals work when configured per officer to better match how agencies intend to track reviews. When a review goal is set to Per Officer, the system now tracks the required number of reviews for each individual officer, rather than treating the goal as a single total across the entire squad. This ensures review workloads and accountability are distributed evenly. For more information, see [Random Video review Settings in Axon Performance](#).

**Availability:** All regions except EU

Improvement | Federal | UI/Accessibility

## Case Management

---

### New case details page and folder experience in the redesigned Axon Evidence

The redesigned case details page will introduce a cleaner, more intuitive layout that makes it easier to view case information and switch between evidence, notes, and sharing tools. This update also brings a new folder experience with a familiar folder tree structure for faster browsing, organization, and drag and drop movement of evidence. Together, these updates are designed to help you triage large cases more efficiently, maintain clear visibility of all evidence, and streamline case organization across teams. See [Case details page](#) to learn more.

**Availability:** All regions

New | UI/Accessibility | Federal

### Removed group expansion in the Internal Access drawer

The Internal Access drawer on the evidence and case detail pages now displays groups by name only, instead of expanding to show individual members. Each group name links to the group details page to view full membership. This addresses performance issues previously experienced when cases or evidence were shared with large groups, which could result in slow page loads, browser freezes, and excessive memory usage. The drawer is now lightweight and responsive at any group size, with no impact to underlying access permissions or group membership behavior. **Availability:** All regions

Improvement | UI/Accessibility | Federal

### Resolved issues

- Resolved an issue where editing case metadata (such as description or ID) was incorrectly blocked if the case owner was inactive; validation now applies only when changing the case owner.
- **Case Assignee Email Notifications:** We fixed an issue where case assignees were not receiving email notifications when new evidence was added to their case by other users or Axon automation, despite the notification setting being enabled.

- Updated the text description on the Send Partner Agency Request dialog to provide clearer messaging when adding an agency to the "My Agency can send to" list. The previous wording, introduced with the January/February 2026 sharing invitation flow changes, was unclear about the outcome of the request. The dialog now reads: "If [recipientAgencyName] accepts your partner request, the users in your agency will be able to share with the users or groups in that agency."

## Form One

---

### Introducing Form One

[Form One](#) is Axon's new AI-powered reporting-writing assistant that helps users complete report forms faster. This tool is a downloadable browser extension that can be used with most web-based forms. Form One analyzes data from various sources, including camera footage that has been uploaded to Axon Evidence and user-provided narration, to provide suggestions for auto-filling report form fields. Users can review and insert these suggestions into their forms and submit them.

**Availability:** Form One is currently in Early Access and is available to trial for all AI Era Plan customers based in the U.S. with web-based forms and reporting systems. Contact Axon Support if you are interested in trialing this new product.

**New** | **AI Era Plan**

## Evidence viewing and playback

---

### Clearer Recorded On overlay and watermark timestamps

The Recorded On overlay is now intentionally static (non-ticking) for Axon body-worn and Fleet video, so it consistently represents when recording started. This helps reduce confusion when comparing the overlay to the burned-in watermark, which shows the camera's wall-clock time in the video frames and can differ when pre-event buffer is present.

Learn more about [Recorded On overlay and watermark information](#).

**Availability:** All regions

**Improvement** | **UI/Accessibility** | **Federal**

## Reposition the Viewed by watermark when reviewing evidence

You can now reposition the Viewed by watermark while reviewing video and image evidence to reduce obstruction of key details. The metadata overlay's Viewed by watermark now displays a UTC timestamp to clarify the timezone shown.

Learn more at [Manage metadata](#).

**Availability:** All regions

Improvement | UI/Accessibility | Federal

## X26P CEW firing log viewing in the redesigned Axon Evidence

X26P CEW firing log evidence is now supported in the redesigned Axon Evidence. Logs open on the evidence details page using the standard PDF viewer. Learn more about [viewing document evidence](#).

**Availability:** All regions

Improvement | Federal

## Resolved issues

- **Large PDF loading:** Large PDF files now display a dedicated “Loading large document” status message indicating that the document is still loading and may take additional time to appear.
- **PDF zoom in Justice:** Zooming into PDFs now preserves full document visibility, with scrolling correctly exposing all content at any zoom level.
- **Blank spinner on first load:** An issue causing the media player to show only a loading spinner on first load has been fixed; the player now initializes and displays controls consistently.
- **Play Original File switch:** For eligible third-party videos, an on-screen switch now allows selection between the original file and the converted file, maintaining access to legacy clips and markers

## Redaction

---

### Improved Redaction Assistant object tracker

Object tracker in Redaction Assistant has an improved tracking model, so tracking is more accurate when an object moves quickly, changes size, becomes briefly obstructed, or leaves the frame and returns. Learn more about using [Redaction Assistant](#).

**Availability:** US1, CA1, LA1, NL1, AU1, DE1

## Improvement

### Audio Redaction Assistant

Audio Redaction Assistant helps you identify commonly redacted PII using the transcript (like names, dates, addresses, email addresses, phone numbers, and national identification numbers). You can review suggested redactions before applying them. Applied redactions affect the audio and appear in the waveform. The Audio PII assistant is also available in bulk redaction for up to 20 audio or video files. Learn more about using [Redaction Assistant](#).

**Availability:** US1, CA1

New | [UI/Accessibility](#)

### Audio redaction margins in Redaction Studio

You can now add redaction margins to transcript-based audio masks so redactions better cover words when transcript timing is not exact. Margins add time before and after detected speech and apply when redacting audio from a transcript. Margins include preset options and a custom option, and are measured in milliseconds. The maximum margin length is two minutes. Learn more about using [Redaction Studio](#).

**Availability:** US1, CA1

Improvement | [UI/Accessibility](#)

### Oval mask shape in Redaction Studio

Redaction Studio has a new oval mask shape for all mask types (object tracker, manual masks, and AI-generated masks), to help you better fit masks to round or curved objects. After you add a mask, you can change its shape to oval. Learn more about using [Redaction Studio](#).

**Availability:** All regions

Improvement | [UI/Accessibility](#) | [Federal](#)

## Third-Party Video Support Update

---

This release introduces new third-party video format support and improves playback reliability for several existing formats.

### New Format Support

- **CathexisVision Archive (.car)**: Added support for secure archived footage playback.
- **Velocity Vision (.blk)**: Introduced aggregate playback support for Velocity Vision .blk files.
- **Next View (.n3r)**: Added support for Next View .n3r files, enabling proper decoding and playback.

### Improvements to Existing Format Support

- **DVD Video (.VOB)**: Improved playback compatibility and reliability for DVD-based .VOB files.
- **QSee DVR (.dvr)**: Updated decoding to provide more consistent playback for .dvr files.
- **ExacqVision (.exe)**: Added audio support and improved playback reliability for exported .exe video files.
- **ClickIt Media Player**: Updated integration to support aggregate playback for ClickIt proprietary formats.
- **Pelco (.exe)**: Updated format handling to correctly process fisheye camera inputs, improving geometry and playback fidelity.
- **Valerus (.mp4)**: Enhanced metadata handling for .mp4 exports, including improved date/time stamping and frame rate correction for reliable timeline navigation.
- **March Networks (.cme)**: Improved Aceformat decoding for .cme files to enhance playback performance.
- **MPEG Video (camcorder)**: Fixed decoding logic for generic MPEG camcorder recordings to support full-length playback without early truncation.
- **Genetec (.g64x)**: Repaired HEVC parser to restore playback support for .g64x files using high-efficiency video encoding.

Learn more at [Third Party Video Support](#).

**Availability:** All regions

**New** | **Federal** | **UI/Accessibility**

## Coming soon

---

### The redesigned Axon Evidence replaces legacy July 31, 2026

On July 31, 2026, the legacy toggle is removed, and the redesigned experience becomes the only Axon Evidence version available. No action is required, but teams should begin using the redesigned experience as their primary workflow ahead of July 31 to support a smooth transition.

If you're interested in making the redesigned experience the default for users at your organization upon login, or switching fully before July, contact your Axon Rep or Axon Support.

Access transition resources, including [help documentation with videos](#), the [Admin Support Toolkit](#), [FAQs](#), and [side-by-side comparisons](#).

## Axon Evidence and Axon Justice AI Generated Summaries of Images and Documents

Identify and review relevant information across more file types with Brief One AI summaries, now available for documents and images in addition to video transcripts. When supported file types, like PDF's, Word documents, text files, and common image formats are uploaded to a case, the system generates a concise summary highlighting key facts and details. This feature is available as an [Alpha release](#). Contact your Axon representative to learn more or request early access.

Learn more about [Transcript summaries and moments in Axon Evidence](#), and [Brief One in Axon Justice](#).

**Availability:** US1, CA

[Improvement](#) | [AI Era Plan](#) | [Justice Premier Plus](#)

# Cameras and sensors

---

To enroll devices in early access ahead of the general release, visit [Early Access Devices](#).

## Axon Body 4

---

### Officers can request drone support using Watch Me on Axon Body 4

Officers can now request Skydio drone support by double-pressing a programmable button on an Axon Body 4. When a Watch Me request is sent, Fusus displays an alert and Skydio DFR Command allows a drone pilot to dispatch and launch a drone to the officer's location. Learn more about the [Watch Me](#) feature. **Availability:** US1

New

### Firmware v1.2607 (Early access available March 18, 2026; general availability targeted April 1, 2026)

Firmware v1.2607 begins early access on March 18, 2026, with additional rollout waves in mid-March and general availability targeted for April 1, 2026. This release primarily includes routine performance updates and fixes an issue where some devices could show a “Recovering” error and could not be hard reset.

Improvement

### New Agency Info Channel for Axon Assistant

Axon Assistant can now answer agency policy questions by voice on Axon Body 4 cameras, for Assistant customers with access to Policy Chat. Users will see a new channel called Agency Info, built for questions and tasks that use agency-trusted data, starting with policy questions. Over time, Agency Info will expand to things like CAD call-for-service info, vehicle lookups, voice-driven form-filling, and more. Learn more about the [Axon Assistant](#) feature.

New

## Resolved issues

- This firmware update fixes an issue where some devices would show a “Recovering” error and could not be hard reset.

## Axon Body 3

---

### Firmware 1.2607 Update

Firmware **v1.2607** begins early access on **March 11, 2026**, with waves in mid-March and general availability targeted for **March 31st, 2026**. This release primarily includes routine performance updates.

#### Improvement

## Axon Interview

---

### Interview Room 4.18 HF3

This hotfix corrects a few issues which only affected a small number of customers with difficult network conditions. See [Configuration settings](#) to learn how to update Axon Interview.

#### Improvement

## Axon View XL

---

### Action Required by June 30: Manual Update Needed to Maintain Secure Auto-Updates in View XL

We have identified an issue on devices running **View XL version 1.32.4** that prevents them from receiving automatic updates. To restore auto-update functionality — and ensure continued access to security patches and feature improvements — agencies must manually update to **version 1.33.2 or later by June 30**.

After June 30, devices that have not been manually updated will be unable to receive critical updates in a timely manner, including important security fixes. We strongly recommend deploying the update via your MDM or standard IT software distribution process as soon as possible to avoid disruption.

### **Important Installation Note**

Before launching the installer, ensure the View XL application is fully closed. Running the installer while the app is open may trigger an error. If this occurs, re-run the installer and select “Repair” to complete installation.

Download instructions are available [here](#).

### **Improvement**

## Coming soon

---

### Axon Body 4

#### Firmware v1.2613 releasing

Starts with early access devices on 4/20, with phased rollout spanning three weeks with general availability targeted for 5/13. This will include performance improvements and an improvement for registration.

### **Improvement**

### Axon Body 3

#### Firmware v1.2613 releasing

Starts with early access devices on 4/20, with phased rollout spanning three weeks with general availability targeted for 5/12. This will include performance improvements.

### **Improvement**

# TASER Energy Weapons

---

## TASER 10 log energize duration improvements

---

You can review TASER 10 logs and pulse graphs with clearer energize duration reporting by separating connected energize time from unconnected energize time. This helps reduce confusion in scenarios where a device attempts to energize without connected cartridges. [Learn more](#).

Improvement | New

## TASER dock charging bay firmware update 2.8.11

---

Axon is releasing hotfix firmware version 2.8.11 for the TASER 7 and 10 dock charger. This hotfix improves error reporting behavior and includes minor bug fixes. Registered docks will automatically install these changes when connected to power and internet.

Admin | Improvement | Federal

## TASER dock firmware update 3.23

---

General availability targeted for April 16. Docks can once again be set up over an internet connection, while still keeping the stronger security protections added in version 3.22. Setup over a local network is still available as well. The dock also has improved, more reliable time updates. Registered docks will automatically install these changes when connected to power and internet.

Admin | Improvement | Federal

## TASER 10 handle firmware update 1.7.32

---

General availability targeted for March 19. This update improves log synchronizations to Axon Evidence, fixing sync failure bugs and reducing the time needed to synchronize. Agencies are encouraged to update their TASER 10 energy weapons as soon as possible to benefit from these improvements.

Admin | Improvement | Federal

## Resolved issues

- Fixed an issue where the Delete Evidence and Edit Date Recorded events were not translating to TASER logs that are copied to Axon Evidence. Also fixed an issue where users were able to delete evidence they didn't have access to.

- **Update: High voltage module (HVM) Critical Error Notifications in Axon Evidence – RMA Required for Specific Errors**

In the January/February 2026 Release Notes, we communicated that certain TASER 10 energy weapons were displaying critical error notifications in Axon Evidence without a corresponding error shown on the handle CID. At that time, preliminary findings indicated these notifications were likely false positives, and we recommended temporarily quarantining affected devices while our investigation continued.

Following additional analysis and engineering validation, we have confirmed that the majority of these critical error notifications were false positives and have removed them from Evidence.com. Any HVM critical error appearing in [Evidence.com](#) should be treated as a confirmed hardware failure and returned through the standard RMA process, even if no error is displayed on the handle CID.

If you have any questions or need assistance initiating an RMA, please contact Axon Technical Support.

## Coming soon

---

### TASER Training Resources

Available in all regions starting Q2 2026. Agencies will be able to view data-driven training resources organized by issues, such as ineffective deployments and inconsistent TASER device operations. Each resource includes a detailed focus area, observable indicators, and suggested actions to help reinforce targeted behaviors. This tool will be available under the TASER menu in Axon Evidence.

Improvement | New

# Axon VR Training

---

## Community Engagement Training: Human Trafficking scenario

---

During a domestic violence response, trainees encounter signs that a victim is being trafficked. Trainees learn to spot subtle indicators, communicate safely and supportively, and coordinate with investigators to connect victims with appropriate services. Learn more about the [Human Trafficking scenario](#).

**Availability:** US1, CA1

**New**

## Coming soon

---

### Simulator Training: vRBT Corrections scenarios

Simulator Training: vRBT will expand to support corrections training with a new set of scenarios designed for institutional environments. These replayable use-of-force scenarios focus on de-escalation, proportional response, and use-of-force decision-making in confined spaces, allowing trainees to practice realistic decision-making under repeatable conditions.

**Availability:** US1

**New**

# Justice

---

## Redesigned Justice interface

The Justice case details page has been redesigned with media cards in gallery view for easier visual review, an updated case table with horizontal scrolling and customizable column widths, and an improved navigation bar. These updates make it easier to navigate cases, scan evidence, and tailor your view when working with cases.

Learn more at [Case details page](#) and [Work with folders](#).

**Availability:** All regions

Improvement | UI/Accessibility | Federal

## Document text search

Document Text Search is now in the Axon Justice reviewer, making typed text in newly uploaded PDF (.pdf) and Word (.docx) documents searchable while respecting existing evidence access permissions. Existing documents are not automatically indexed; you may request a one-time backfill priced based on document volume by contacting your Axon representative. Document Text Search is enabled by default and can be turned off by admins using the Search Across Document Text permission.

Learn more at [Search document text](#).

**Availability:** US1, US3, US4, CA1, AU1, EU1, NL1, LA1

New

## Resolved issues

- **Justice Reviewer:** When users zoomed in within a PDF, users were unable to see part of the PDF, as it was cropped out.
- **Justice Reviewer:** Metadata was not updating when users moved to a subsequent PDF.
- **Justice Reviewer media play:** We fixed failures to play some converted and third-party audio/video files in specific customer environments.

## Coming soon

---

### Axon Evidence and Axon Justice AI Generated Summaries of Images and Documents

Identify and review relevant information across more file types with Brief One AI summaries, now available for documents and images in addition to video transcripts. When supported file types, like PDF's, Word documents, text files, and common image formats are uploaded to a case, the system generates a concise summary highlighting key facts and details. This feature is available as an [Alpha release](#). Contact your Axon representative to learn more or request early access.

Learn more about [Transcript summaries and moments in Axon Evidence](#), and [Brief One in Axon Justice](#).

**Availability:** US1, CA

Improvement | [AI Era Plan](#) | [Justice Premier Plus](#)

### Justice advanced sharing (Alpha release)

Advanced case sharing lets you share a case with partner organizations so they can access the latest version of the case and evidence directly from your Axon Justice system. The case remains in your system and partners can see updates as evidence is shared. You control the sharing policy and access to the case and its evidence throughout the collaboration. This feature is available as an [Alpha release](#). Learn more at [Advanced Sharing Overview](#), and [Justice Advanced Sharing](#). Contact your Axon representative to learn more or request early access.

**New**

### Justice case filtering and table customization

Case filtering will be updated with a new filter and quick view experience, along with horizontal scrolling and customizable column widths in the case detail table. These updates make it easier to review and manage large or complex caseloads. Learn more at [Case details page](#), and [Work with folders](#).

**New**

## Justice utility bar and display updates

Justice will introduce a new utility bar along with light and dark display modes. These updates improve visibility and make it easier to access key actions while working in Justice.

**New**

# Enterprise

---

## View evidence video and images permission

A new View evidence video and images permission is being added to the Evidence Management permission section. This permission controls whether users can view the underlying media for evidence items (view videos, see images, hear audio, etc.) This permission will be automatically assigned to all roles that currently have the View Unrestricted Evidence, View Restricted Evidence, and View Confidential Evidence permissions, so users will not lose existing access to media following this release. For newly created roles, this privilege will default to Prohibited. If you want any roles to be able to access evidence transcripts and metadata (for example, so they can use Draft One), but NOT view the underlying media, you can prohibit this permission.

See [Draft One administration - Assign permissions](#) for more information.

**Availability:** This update will roll out to all regions in March.
