

Films for Stretch Hooder Applications

With over a decade of legacy experience in supplying stretch hooder films for many applications, we recognize the need for constant innovation in this growing market. Inteplast Engineered Films (IEF) stretch hooder films feature industry-leading performance and consistency. Our portfolio of films improves upon common performance issues typically seen with existing films on the market. Customization options are available upon request, including ultraviolet inhibitors (UVI) and a variety of additives.

Applications

We supply films for a wide variety of applications, including but not limited to:

- Bagged chemicals & resins
- Building products
- Corrugate & paper
- Food & beverage
- Household appliances (white goods)
- Insulation
- Lawn & garden products

Features & Benefits

- Superior stretch properties compatible with a wide variety of applications
- Excellent containment force for load stability
- High puncture and tear resistance
- Available in a variety of widths and sizes
- Customization options available upon request

Films for Stretch Hooder Applications

External Blend Code	Typical Gauge	Product Description
IPHO-HST	3.5 - 5.5	<u>High Stretch Hooder Film</u> Designed for applications requiring high stretch levels to conform to complex shapes while maintaining excellent protection from the elements.
IPHO-HCT	3.5 - 5.5	<u>High Containment Hooder Film</u> Designed for a variety of applications requiring high load-containment levels and compression strength.
