

InteGreen® Family of Sustainable Films

Inteplast Engineered Films' (IEF) InteGreen line features solutions that support the circular economy and other sustainability initiatives, including recycling, landfill avoidance, compostability, down-gauging, source reduction, and more.

InteGreen Sustainable Solutions

Films with Recycled Content

InteGreen films made with post-consumer resin (PCR) and post-industrial resin (PIR) use plastics that have completed their lives as consumer or industrial products. The use of recycled content reduces the total consumption of virgin plastics and minimizes landfill impact.

All of our recycled content resins are third party or self-certified to ensure the highest levels of quality and consistency.

Most of our standard product blends can be customized with varying amounts of recycled content.

All-PE Store Drop-off Recyclable Films

Our portfolio of How2Recycle® pre-qualified films for Store Drop-off recycling is constantly expanding. A finished product with the How2Recycle label educates consumers on how to properly discard the used package at participating Store Drop-off locations.*

Our all-PE, mono-material films are inherently store drop-off recyclable when used as a standalone film.

We also offer an industry-leading selection of sealant films and print webs designed for store drop-off recyclable, all-PE mono-material laminations.

Store Drop-off Recycle Ready Compatibilized Films

Our store drop-off recycle ready films feature multi-material compatibilizers that enable the in-store recycling (where accepted) of previously non-recyclable co-extrusions through the existing PE store drop-off recycling stream.

We offer barrier and non-barrier compatibilized blends featuring materials such as ethylene vinyl alcohol (EVOH) and nylon.

Compostable Films

Our InteGreen compostable films are made exclusively with home or industrial compostable resins, and are designed with the same industry-leading performance and quality standards you've come to expect from IEF's products.

Applications include home compost bags and fruit labels. Customization options include different colors and slip levels.

* The final package's How2Recycle label may change due to product application and other factors, and any brands interested in using the label must be a member with How2Recycle.
