Re: Letter of Compliance for Paper Bags PFAS & PCR

Product: Paper Bags

Dear Valued Customer:

Please be informed that our kraft paper bags are made with 100% recycled content with long fiber materials and contains a minimum of 40% post-consumer recycled content.

Our white color paper bags are made with prime virgin materials.

Additionally, our manufacturers do not use perfluoroalkyl and polyfluoroalkyl substances (PFAS) as process aid in production of our paper bag products and considered safe for food contact and storage.

Furthermore, based upon our knowledge of the manufacturing process and information provided by our suppliers, we would not expect PFAS substance to be present in our final products.

Thank you for being an Inteplast Group customer.

Sincerely,

Joe Wang  
Global Sourcing Manager
