

CS-D2D

Digital to Digital Format Converter

So, your client just got a brand new Smart TV with all of the cool network features (VuDu®, Hulu®, Netflix®, YouTube® etc.). They are happy because they have all the neat stuff in one device. But.....how do you get the optical output audio back to your AVR (we all know that finding a long enough “CL” rated tos-link is not that easy). Well, we have the solution. The CS-D2D will take the optical output (PCM, Dolby and DTS) and format convert it to digital coax. This will give you an easy to use and terminate “CL” rated cable that can go the distance. Mount the CS-D2D behind the display and connect the “in” to the optical out from your display then connect the coax “out” to the in-wall coax cable. The final connection will be the coax into the RCA digital connection on the AVR.

- Coaxial or Digital Audio
- Supports S/PDIF audio & extends transferring distance
- 1x coaxial jack & 1x optical jack inputs
- 1x coaxial jack & 1x optical jack outputs
