

How to Prevent WOOD FLOOR GAPS!

Gaps are common with wood floors. Follow these 2 easy solutions to take care of them quickly.

1

Turn on the humidifier as soon as you start the heater in the winter.

2

Always stay within these ranges:

Relative Humidity: 35-55%

Temperature: 60-80°

And remember...

Seasonal winter gaps will likely close in the spring and summer.

Narrow Boards = Narrow Gaps
Wide Boards = Wide Gaps

A wide plank floor will gap more than a narrow plank floor.
