

TELECOM INFRA PROJECT

1 Demand for Connectivity is Rising

The ways we use connectivity are expanding – **we need faster speeds and higher quality experiences everywhere we go.**

Performance

As people seek to experience the full benefits of connectivity, there is increasing demand placed on telecommunications networks.

But
did you
know...

Connection

And that is if you have a connection – almost half the world's population is still unconnected.

COVID-19 has highlighted the urgency of these problems by reinforcing just how essential good connectivity is.

2 The Problem

Telecom network infrastructure is provided by a small number of end-to-end suppliers and constrained by closed systems that make it hard for new, innovative suppliers to enter, compete, and thrive. **This slows down innovation**, and slows down the availability of new equipment, ultimately making it harder for operators to upgrade and expand their networks.

This means we miss out on faster internet, better coverage, and the most transformational connectivity use cases, including those enabled by 5G.

The old ways of doing things won't get the world where it needs to go.

3 What is TIP?

The **Telecom Infra Project (TIP)** is a global community of companies and organizations working together to accelerate the development and deployment of technology solutions that deliver the high quality connectivity the world needs - now and in the decades to come.

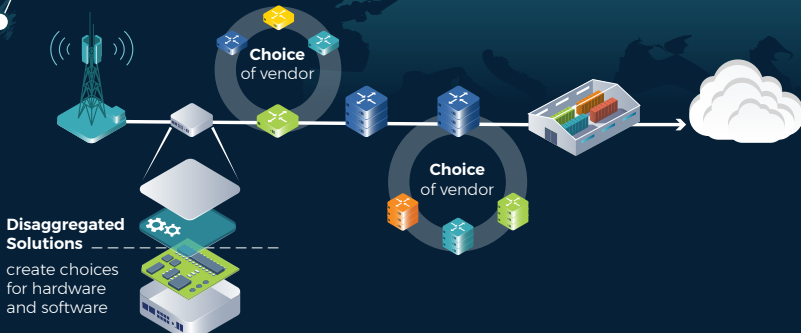

Our Community

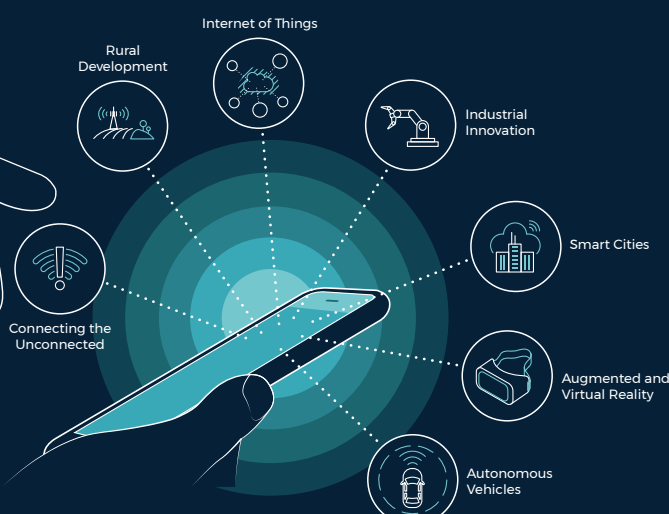

4 The TIP vision

TIP believes **open, disaggregated, and standards-based networks** address the challenges of a consolidated ecosystem by providing network operators more choice and flexibility to improve networks at a pace that keeps up with rising demand.

5 The benefits TIP delivers

By reinventing how telecom infrastructure is built, we are creating a more dynamic ecosystem where emerging suppliers can innovate and bring to market new, more cost efficient solutions – boosting the efficiency of existing solutions, reducing barriers for the most attractive connectivity use cases, and delivering a variety of benefits to users – including to those previously unconnected:

6 Together We Build

Our growing community is already designing, building, and bringing to market disaggregated solutions that will help support the benefits of connectivity for communities around the world - both now and in the future.

- **Project Groups** solving connectivity challenges
- Global network of **Community Labs** testing and integrating TIP technologies
- The TIP Exchange marketplace offering **TIP-enabled products**
